QUIET, automatic, made entirely of steel...this General Electric is indeed the refrigerator of the future!

The engineers and scientists of the Research Laboratories, having solved the most important problem of electric refrigeration—that of the mechanism—next turned their attention to the designing and building of this infinitely superior refrigerator cabinet.

It is a small-family model, built entirely of steel—as strong as a safe. It cannot warp. All its joints are electrically welded . . . as strong as the steel itself.

The cabinet is finished in a special coating that has all the beauty and sheen of porcelain, but will not crack, chip or check. It has a new type of insulation material, used in exactly the correct amount to maintain perfect temperature, well below the 50 degree danger point.
