THE U. S. Government Chemists have reported, after an examination of the different brands, that the ROYAL Baking Powder is absolutely pure, greatest in strength, and superior to all others

ROYAL BAKING POWDER COMPANY, 106 WALL ST. NEW-YORK.

## FRIENDSHIP.

Friendship is not like love; it cannot say
"Now is fruition given me and now
The crown of me is set on mine own brow.
This is the minute, the hour, and the day."
It cannot find a moment which it may
Call that for which it lives; there is no vow
Nor pledge thereof, nor first fruits of its bough,
Nor harvest, and no myrtle crown nor bay.
Love lives for what it may, win or lose won;
But friendship has no guerdon save to be,
Itself is its own goal, and in the past
Or future can no dearer dreams be done
Or hoped for; save its own dear self to see
The same, and evermore unchanged to last.
—Edward Lucas White in New York Sun.

### "General Order No. 1."

John F— was a soldier. He was a member of the Tenth Maine regiment and orderly sergeant of his company. He was every inch a soldier, brave and true, albeit a little prone to stick to the letter rather than to the spirit of the law. The articles of war were his study. In short, he was excessively military—military all through.

At the close of the late war John came home and was shortly afterward installed into the responsible position of sexton of our church, and he straightened things out wonderfully. On the very first Sabbath after his taking charge we found posted upon the wall of the church vestibule an imposing document headed, "General Order No. 1."

There had been trouble in certain quarters resulting from the difficulty which ladies who came to church late found in gaining their seats when gentlemen had got in ahead of them. John determined to remedy this, so he issued "General Order No. 1," which read as follows:

Rules to be observed when a lady wishes to enter a pew in which gentlemen are already seated: Let the lady advance one pace beyond the pew—halt—about face—and salute. The pew will be vacated by the gentlemen by a flank movement. The squad should rise simultaneously when the lady presents herself, and face outward—then deploy into the aisle, the head man facing the lady, the others passing to his rear, when, if necessary, the line will be perfected up and down the aisle by a right or left countermarch, as the case may require, the right in front.

The lady, when the way is clear, will salute again, and advance to her position in the pew after which the gentlemen will break from the rear, obliquely, and resume their places.

Parties performing this evolution have possession of the aisle until it is completed, and none others will interfere.

JOHN F. F—, Sexton.

Things went straight after that.—New York Ledger.

### What Shall We Make Our Sundays?

What is to be the fate of our Sunday no one can tell. Its fate ought to be fair and even noble when one thinks about the growth of common sense. The idea of a day of rest for man and beast ought to ask no aid from revelation, so easily should it repose upon the wants of our race. And if to this conception of rest be added the idea of a certain high and moral education, the day should still find ample support in the processes of reason. A majority of Americans perhaps favor the day because of their religious beliefs and feelings, but almost the entire population ought to confess the value of a season by any former period.

The multiplying millions, the awakened intellects which can grow in vice as easily as in virtue, the needless work and pain of a people made half wild by liberty, the value of all true education and study, whether it comes from the arts or the fields of the sanctuary, join in asking the thinkers powerful in the church to discover what kind of Sunday will most truly bless man, not only as a religious being but also as a being capable of greatness and happiness upon earth.—Professor David Swing in Forum.

### "Everybody's" Idea.

First Boy—Why does everybody look so glum?

Second Boy—'Cause there ain't goin to be no war.

First Boy—Did everybody want to go to war?

Second Boy—No; everybody wanted to stay home an make money while the war was goin on.—Good News.

### New Office Requisite.

Visitor—Why do you have that dog sitting on your writing desk?

Clerk—I have mislaid my sponge, so I am getting him to lick my postage stamps for me.—Sobremesa.

ROOFING!

GUM-ELASTIC ROOFING FELT costs only $1.00 per 100 square feet. Makes a good roof for years, and any one can put it on.

GUM-ELASTIC PAINT costs only 60 cents per gal. in 5-gal. lots, or $1.50 for 1-gal. tubs. Color dark red. Will stop leaks in tin or iron roofs that will last four years. Try it.

Send stamp for samples and full particulars.

GUM-ELASTIC ROOFING CO., 29 and 41 West Broadway, New York.

Local agents wanted.

"German Syrup"

JUDGE J. B. HILL, of the Superior Court, Walker county, Georgia, thinks enough of German Syrup to send us voluntarily a strong letter endorsing it. When men of rank and education thus use and recommend an article, what they say is worth the attention of the public. It is above suspicion. "I have used your German Syrup," he says, "for my Coughs and Colds on the Throat and Lungs. I can recommend it for them as a first-class medicine."—Take no substitute.

### Prices of a Few Autographs.

Some prices on autograph letters are as follows: From Charles Francis Adams, 1859, 50 cents; long letter in German by Hans Christian Andersen at Copenhagen, $5; John Quincy Adams, 1841, $5; P. T. Barnum, 1867, 75 cents; Joseph Bonaparte, in regard to the sale of his diamonds and on political matters, dated at Philadelphia, 1823, $4; Ole Bull, $4.50; President Cleveland, letter regarding Mrs. Cleveland, 1890, $3; C. Corot, on art subjects, $3; Edward Eggleston, on sending copy of a novel, 75 cents; Nathaniel Hawthorne, Concord, 1861, $12.50; Leigh Hunt, three page letter on note paper without date, $4; Jean Ingelow, $2.50; Washington Irving, $6.50; Andrew Jackson, $7.50; Louis XIII of France, signed document, $3; President Monroe, commission of a major in the army, on vellum and signed by J. C. Calhoun, $2.50; Joaquin Miller, autograph verse, $1; Marshal MacMahon, $2; Ouida, $3; Ellen Terry, $1; President Tyler, $2.50; Victoria, Duchess of Kent and mother of Queen Victoria, $3; Benjamin West, $10.

An order of arrest signed by Robespierre, also signed by Couthon, is valued at $75; a salary advance agreement of Richard Brinsley Sheridan, $7.50; Jonathan Spill, with seal of the deanery, $10; photograph of Theodore Thomas, signed and dated, 75 cents.—New York Telegram.

### American Levity.

Singularly enough it appears that Poe, the only absolutely distinct genius our country has yet produced, was incapable of humor and that even his levity was artificial. Hawthorne, next to Poe in originality and far above him in style, was but meagerly equipped with smile provoking material. Bryant, our greatest poet, maintained a lofty seriousness throughout his work.

It may be sacrilege to say so, but the truth is Lowell was the founder of our levity. He never could be quite a reliably serious thinker, but could at any moment break off into funmaking. Humor is good in a fresh and natural state, but so is a peach. Cut and dry either, and you have a poor article for a regular diet. We Americans have fed upon laughable things until our faces show the wrinkles of a grin even when in solemnest repose.

We are never sure of one another, but must wait awhile after each communication to find out whether or not it is a joke. The effect of highest sincerity cannot be reached in the midst of all this hurly burly of chaffing voices. How can one be serious while everybody else is grimacing?—Chautauquan.

### There Was Just One Man.

There is a gallant congressman who once had the reputation of sowing wild oats broadcast. When he was first running for congress, many breezy stories were told about him. At last he gave it out in the heat of his campaign that he would speak shortly in defense of his morals. It was a Populist district, and he had a big audience. The speech every one liked, but until the last sentence not a word was spoken about the advertised subject. At the last the candidate stuck his hand under his desk and pulled out several boxes of imported cigars.

"Gentlemen," he cried, "I am accused of having certain bad habits. Particular instances have been alleged in fact. I wish to make some one in this assemblage a present of a box of good cigars. If there is any one here who has never done what I have done, will he please step up and take it?" No one moved. For a long time the big crowd kept silent. But an old Baptist minister in a far back seat after awhile arose and said in a high, squeaky voice, "Colonel, I don't smoke."—San Francisco Argonaut.

### Didn't Know His Own Child.

At Antietam, just after the artillery had been sharply engaged, the Rockbridge (Va.) battery was standing waiting orders. General Lee rode by and stopped a moment. A dirty faced driver about 17 said to him:

"General, are you going to put us in again?"

Think of such a question from such a source to the general of the army, especially when that general's name was Lee.

"Yes, my boy," the stately officer kindly answered; "I have to put you in again. But what is your name? Your face seems familiar somehow."

"I don't wonder you didn't know me, sir," laughed the lad; "I'm so dirty, but I'm Bob."

It was the general's youngest son, whom he had thought safe at the Virginia Military institute. "God bless you, my son; do your duty!" and the general rode on.—Washington Post.

### Fuel in Smoke.

A great deal of value "goes up in smoke," but few people realize that smoke has any value. Some Scotchmen, however, have discovered that it is so valuable that they pay several of the Scotch iron works a regular rental for the privilege of collecting and carrying away the smoke and gases from their blast furnaces. The smoke and gases are passed through several miles of wrought iron tubing, diminishing in size from six feet down to eighteen inches, and, as the gases cool, there is deposited a considerable yield of oil.

At one of the smallest of these institutions—a Glasgow plant—there are pumped and collected about 60,000,000 cubic feet of furnace gas per day, and on an average some 25,000 gallons of furnace oil are recovered weekly, using the residual gases, consisting chiefly of carbonic monoxide, as fuel for distilling and other purposes, while a considerable yield of sulphate of ammonia is obtained.—Chicago Press.

### The Metal of the Future.

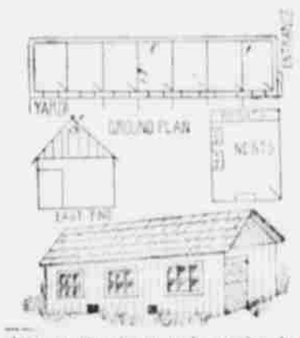
"Here is the metal of the future," said a gentleman, holding out what was apparently a silver matchbox, but which was as light as air. "Of course," he continued, "aluminum is no new discovery, but it is only lately that the cost of production has brought it within the possibilities of ordinary use. The most characteristic feature and great advantage of the metal is its wonderful lightness, as you see. It is very like silver, but is only one-fourth its weight. It has one other great advantage that every housekeeper will see with joy, and that is that it never oxidizes or tarnishes.—New York Tribune.

## HOUSE FOR LEGHORNS.

### How It Is Built, Ditched and Arranged on the Inside.

This sketch is from the building of a prominent breeder of white and brown leghorns. The buildings are 12 feet wide, with a good single roof, double boarded and paper between, some with floors of wood, some cement and some with earth floors. The board floor, well bedded with straw or chaff, is considered by him as the best. As he does not breed in large numbers, ten or twelve in a pen, the pens are divided up, each 8 feet wide, each portion boarded up 3 feet and wire or laths above, laths preferred.

The roosts are 2x4 round off and they are 2 feet over a drop board which slants a little to the front with a 2-inch



cleat in the front to keep the droppings from falling off. Under the drop boards or on the ground in front of them are boxes filled with hay or straw so it can be carried out any time and cleaned. The doors between pens are hung all the same way and swing with pulleys and weights, so they will always shut, with a hook to hang them back to the wall when needed. Yards are as long as the land will permit, with a gate in the end of each yard so a horse and plow can be used to stir up the ground. When yards are large enough potatoes can be grown with good success. The fencing for leghorns is boards 2 feet high and wire 6 feet above that, or 8 feet in all for the larger breeds, 2 feet wood and 3 to 4 feet wire is all. Houses are built high and ditched on each side 2 feet deep to take up all the water in spring. It will, of course, do for any kind of fowls.—John W. Caughey, in Farm and Home.

## AMONG THE POULTRY.

PLAN to have the hens lay when eggs are dear.

BOILED milk is one of the best remedies for diarrhea.

IT is only in exceptional cases that pullets should be sold.

IN nearly all cases gapes is caused by feeding in filthy places.

SUNFLOWER seeds make a good food for the hens while molting.

YOUNG fowls that are being kept for growth should never be overfed.

ANY stimulant fed too plentifully and persistently soon loses its effect.

A good sprinkling of fresh earth is one of the best materials to keep down bad odors.

RED pepper is only a temporary stimulant, and increases the appetite for a short time only.

ONLY foods should not be fed to laying hens except in cold weather or when they are molting.

HEALTHY fowls pick up their food quickly and relish it. When they do not something is wrong.

UNLESS it is necessary it is rarely good economy to market small chickens late in the summer or early fall.

SELL off the surplus cockrels and late-hatched pullets. The latter will not lay until late in the spring.

SUNFLOWER seed and oilmeal can be fed to good advantage in small quantities during the molting season.

THERE is no reason for keeping and feeding old roosters that will not be wanted for breeding next season.

GIVE them a chance and the ducks and geese will soon clean up the pursslane in the garden; they are very fond of it.

NO MATTER what breed is selected, vigor and activity should always be considered. An overgrown, fat fowl is a nuisance.

WHEN it can be done conveniently, it will be a good plan to sow a patch of rye close to the poultry house for fall and winter pasturage. The fowls will pick over it every day that the weather will permit.—St. Louis Republic.

## AN ODE TO THE HEN.

Of robins and bluebird and linnet, spring poets write page after page; their praises are sounded each minute by prophet, soothsayer and sage, but not since the stars sang together, not since the creation of men, has anyone drawn a goose-feather in praise of the patient old hen.

All honor and praise to the singing that cheers up the wild wood in spring; the old recollections of bringing joy, childhood and that sort of thing; but dearer to me than the twitter of robin or martin, or wren, is that motherly cluck when a litter of chickens surrounds the old hen.

And her midwinter cackle, how cheery, above the sow in at the bran mash; it notifies hearts all a-weary another fresh egg has been laid, and when the old bird wakes weary and aged and lazy and fat, well cooked with light dumplings and gravy, there's great consolation in that.

—Nebraska State Journal.

## THE WINTER LAYERS.

### Must Be Hatched Early and Well Fed During Warm Weather.

For keeping in winter, the most desirable kind of fowls we know of are those which will naturally give us the greater number of eggs during that season. Eggs in winter—from about Thanksgiving time to Easter—are the most expensive to buy, because, as a rule, so few hens are then inclined to lay. To possess this "winter-laying breed," we need not travel far to obtain the right variety (though, of course, it is known that the several Asiatics and the Plymouth Rocks are among the best) but we must have pullets of the right age, of whatever sort we keep. If these pullets are hatched early enough the preceding spring to have time before November to fully mature, they will at that period begin to lay, provided they are properly fed and cared for during the summer and early autumn, and have good, snug, warm quarters to dwell in, when the cold, sharp weather sets in. No hens or pullets will lay eggs in desperately cold winters, says Poultry World, if they are exposed to the inclemency of our December and January weather. Now and then we find an egg or two, dropped by the fowls in midwinter. But as a rule, unless we aid them with warmth and kind usage then, they will set "discount" for us in the extreme cold season. If we desire to have fresh-laid eggs, therefore, in the winter-time, be it remembered, we must use the pullets which have come from the early previous spring hatch, and we must provide them with good warm houses, stimulating food, and good care through the autumn and early winter months. When we come to the breeding stock—from which the succeeding spring we desire to produce fresh hatches of chickens—then the later birds of the previous year, or the two or three-year-old hens that come into laying in February and March, will be profitable. Winter-laid eggs are of no account for hatching purposes, except in the incubator. And although it may be well enough to start an early brood or two annually, the bulk of all the hen-setting done in the North occurs to the best advantage after the month of March.

## THE POULTRY HOUSE.

### How It May Be Enlarged at Comparatively Small Expense.

There are scores of poultry houses in the land that are detached buildings in themselves, and in size something like ten by fourteen feet, accomodating twenty or twenty-five fowls; and there are scores of owners of these buildings who would like to keep a larger stock of poultry were the accomodations for housing them ample. The accompanying sketch shows how these single houses may readily be enlarged to three times their present size, and that, too, at small expense. Two wings of equal dimensions with the original building are built upon its sides, the roof of each being a continuation of the original roof, though forming a small angle at the point of juncture. The side walls of the old building are left intact for increased warmth in the inner room, where a more tender breed of fowls, such as the Leghorns, may be kept in winter, giving the outside rooms to the more hardy Plymouth Rocks or Brahmas. Through these side walls, however, is cut a door on either side at the front, so that communication may be had

THE ENLARGED POULTRY HOUSE.

with the side rooms from that in the center. This gives but one outside door for the whole building, and so adds to its warmth in winter. The additions, as well as the ends of the main house should be covered with building paper and then shingled. With a double door and double windows, such a house ought then to be most comfortable during cold weather.—American Agriculturist.

## BEE KEEPING NOTES.

### Wisdom Founded on Experience, in a Condensed Form.

Never waste time in wintering weak colonies.

Never take from a strong colony in the spring to build up a weak one, as you may lose the work of both of them.

Never keep a superannuated queen in your yard.

Never leave a newly-hived swarm near the place where it clustered, as you may be surprised by its taking to the woods. Remove it to a stand at a distant part of the yard at once, whether all the bees are in or not.

Strong colonies protect themselves against robbers and the bee moth.

Strong colonies at the proper time insure a successful honey harvest.

A large number of extra combs are necessary where extracted honey is our aim.

Black bees are better architects than Italians, and can gather as much honey; but the docility of Italians allows us to handle four colonies where we can one of the blacks.—Dr. Howard at Texas Bee Convention.

### Table Scraps for Poultry.

The scraps from the table are quite an addition to the food, and greatly lessen the cost where but a small flock is kept, but they are of no consequence whatever when there are large numbers of fowls, as the proportion to each fowl is too small to be of assistance. There are, however, quite a number of families who delight in the keeping of a few hens, and as the scraps are then of value, and the labor insignificant, the flock is sure to give a profit. In fact, where there is a large quantity of scraps, or other waste, we consider it wise to procure a lot of hens in order to consume such materials.

### Foods for Cattle.

Cattle foods are classed as carbonaceous and nitrogenous; the former, of which corn is the principal one employed, produces chiefly heat and fat; there are scarcely any milk-producing forces in it, nor is its fertilizing energy of any great value. Living on heat its function is to produce heat in the animal structure; therefore, don't feed a milch cow any more corn than will serve to balance her ration properly. The nitrogenous foods are those rich in albuminoids and which produces muscle, and therefore milk. They are oats, wheat bran, cotton-seed meal, linseed meal and some others. These foods not only produce the most and best milk, but they are the best to promote growth in the young animal. Clover, if cut in season and perfectly cured and saved, forms an almost perfect ration.

### Feeding Sheep for Market.

Feeding sheep for market can in many cases be made profitable if proper care is taken in the management, yet the larger proportion of the sheep sent to market have not been fed into a proper condition to make the best mutton. This not only lessens the price it is possible to realize, but also affects the profits and tends to restrict consumption. It is an exceptional case with any kind of stock when it can be considered desirable to send to market before they are fully ready, and especially so at this season, when it is comparatively easy with a little care in feeding to fully fatten for market. With good pasturage a very little extra feeding will fit an average sheep into good condition for market.—Wool and Mutton.

WHEN WAR IS DECLARED

Against man's happiness by his stomach, the enemy may be marshaled and brought speedily and easily to terms. That potent cordial of civilization, Hostetter's Stomach Bitters, disciplines the rebellious organ thoroughly. Indigestion, when from weakness of the stomach, and the food in it, is out of the power to digest, decomposes and sentinels, giving rise to heartburn, dizziness and pain, besides a multitude of symptoms both chronical and perplexing. But pause not despair when the great stomachic is resorted to and used with persistence. Perseverance gives time to neutralize disorganizers of bile, and even constipation and hypochondria it effectually cures. To the complaints dissolved of these the Bitters is fully adequate. Dyspepsia, costiveness, complaints of debility, rheumatism and malaria are completely subdued by this genial medicine.

Unbelieved in his crazy he goes,
Over his departure few are sad,
This was the sociable man who chose
To tell his friends what pills they had.

ON THE OCEAN.

There is no place where ALLCOCK'S POROUS PLASTERS do not prove their value. George Augustus Sala, the well-known English writer, writing of his trip across the Pacific, says:

"I especially have a pleasant remembrance of the ship's doctor—a very experienced maritime medico indeed, who tended me most kindly during a horrible spell of bronchitis and spasmodic asthma, provoked by the sea fog which had swooped down on us just after we left San Francisco. But the doctor's prescriptions and the increasing warmth of the temperature as we neared the tropics, and, in particular, a couple of ALLCOCK'S POROUS PLASTERS clapped on—one on the chest and another between the shoulder blades—soon set me right."

BRANDRETH'S PILLS always act uniformly.

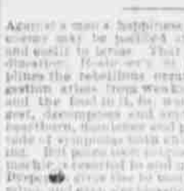
WHISKY, if imbibed to habitually, is sure to spoil a man's complexion. That is, it will give him a rye face.

Not so many Harvard students as usual will spend the Christmas holidays at home this year. The Yale game, as you may remember, went the other way.

Use Enameline Stove Polish; no dust, no smell.

TRY GERMEA for breakfast.

IT COVERS A GOOD DEAL OF GROUND



—Dr. Pierce's Golden Medical Discovery. And when you hear that it cures so many diseases, perhaps you think "it's too good to be true."

But it's only reasonable. As a blood-cleanser, flesh-builder, and strength-restorer, nothing like the "Discovery" is known to medical science. The diseases that it cures come from a torpid liver, or from impure blood. For everything of this nature, it is the only guaranteed remedy. In Dyspepsia, Biliousness; all Bronchial, Throat and Lung affections; every form of Scrofula, even Consumption (or Lung-scrofula) in its earlier stages, and in the most stubborn Skin and Scalp Diseases—if it ever fails to benefit or cure, you have your money back.

The worse your Catarrh, the more you need Dr. Sage's Catarrh Remedy. Its proprietors offer $500 cash for a case of Catarrh in the Head which they cannot cure.

Golden West Baking Powder

Purity and Leavening Power UNEQUALED.

CASH PRIZES

DROP IT

IF YOUR BUSINESS DOES NOT PAY. Chickens are easily and successfully raised by using the Petaluma Incubators and Brooders. Our illustrated catalogue tells all about it. Don't buy any but the Petaluma if you want strong, vigorous chicks. We are Pacific Coast Headquarters for Bone and Clover Cutters, Markers, Books, Capons, Poultry Tools, Fountains, Flood's Roup Cure, Morris Poultry Cure, Cyclone the great chicken-lice killer and every other article required by poultry raisers. See the machines in operation at our exhibit with the Norwalk Ostrich Farm, Midwinter Fair, hatching ostriches and all kinds of eggs. Catalogue free, if you want it, write to us.

PETALUMA INCUBATOR CO., 250-252-254-256 Main street, Petaluma, Cal.
