Your Pen Troubles Cease When You Buy a Conklin

You can fill an ordinary fountain pen in one or two minutes if the ink dropper is where you can find it easily, and you don't get one of those pesky air bubbles in the pen barrel.

A Conklin Self-Filling Pen fills itself in about the time it takes to dip a steel pen in an ink bottle.

This saving of time is worth a good deal to the busy man or woman.

Besides, the Conklin way is cleaner and more satisfactory from every viewpoint.

The Conklin pen doesn't leak.
It doesn't clog.
It doesn't sweat.
It doesn't soil the fingers.
It doesn't require shaking or jerking—you don't have to scratch, scratch, scratch to start the ink flowing.

Conklin's Self-Filling Pens range in price from $2.50 to $5, and every pen is sold under a positive guarantee.

TO PROTECT YOUNG GIRLS

Portland "Big Sister" Society Promises Much Good.

Portland has a "Big Sisterhood," an unique society, which invites the interest and co-operation of mothers and daughters, and other members of families throughout the state of Oregon. This society is quite informal in its organization, its aim being to give friendly aid and counsel to girls who are alone in Portland, or who for any reason are in need of a "Big Sister." The work of the society is not offered as a charity, but is just the friendliness of one woman for another, or a "Big Sister" for a "Little Sister."

So many girls going to the city from the country or small towns have fallen into misfortune through the want of a friend, or in some cases have been utterly lost to their home people, that these Portland women have associated themselves to extend the friendly hand to girls and women who need any kind of help whatever.

If girls, or the parents of girls, who are going to Portland will write to the "Big Sisterhood," care of the People's Institute, arrangements will be made to give them such attention as they may wish on reaching the city and their welfare will be looked after by "Big Sisters," who will take pleasure in knowing them, and helping them. So many sad things happen every day to girls who come to Portland from small towns and the country, that the importance of this acquaintance with the "Big Sisters" is urged upon mothers and daughters throughout the state.

The New Method

Of Treatment of

Diseases of Women

as used by

DR. TOEL

the Chicago Specialist now in Dallas to introduce His Electrical Methods.

Diseases of women are treated by physicians and surgeons who are not electricians, usually either by medicines given by the stomach, or applied locally to the affected parts, or by the knife of curette.

To Professor Apostoli, of Paris, France, and to Professor Massey, of Philadelphia, belongs the credit of first having made known to the medical profession electrical methods that are far superior to the use of medicines, tampons, supporters, or the knife. To the late Dr. John Byrne, of Brooklyn, belongs the credit of showing years ago, the value of electricity over the knife in cancer of the womb, to the medical profession in a book written by him. At the same time, however, Dr. Toel was using the same electric methods without having heard of Dr. Byrne's methods.

Treatment by medicines is usually without much effect in diseases of women or, at the best, only of temporary effect. Tampons and supporters really make the case worse as they stretch the ligaments and thus make them more unable than before to fulfill their proper function.

Knife operations have all the dangers of blood poisoning, loss of blood, nervous shock, chloroform or ether, and, in many cases, unsex the patient by removal of the uterus, tubes or ovaries, thereby often causing melancholia and insanity.

Electrical treatment strengthens the muscles and ligaments instead of weakening them as tampons and supporters do. Bleeding, as well as pus discharges, are quickly stopped by electricity without the danger of scraping of the womb. Inflammatory deposits are absorbed without forming pus, and pain in the different parts is quickly subdued.

Electrical operations are free of all the dangers of knife operations and if properly performer by an expert, seldom cause pain for more than a few minutes, while in most cases, they are entirely free from pain. In fibroid tumors the patient is not confined to the bed as in knife operations, and, above all ,is not unsexed. Electrical operations for cancer of the womb have that great advantage over knife operations which all electrical cancer operations have; that is, that returns of the cancer which, in knife operations are about 80 per cent, are comparatively rare after electrical operations, if performed in time.

Dr. Toel has for 30 years made a specialty of electrical treatments and operations and, in addition to his four years' education as a physician and surgeon in European universities, having studied electrical engineering in this country, is always supplied with the latest and best electrical apparatus and instruments, often of his own invention.

Read The Observer of April 15, 18 and 22 about electrical treatment of cancers and tumors, piles and fistula, diseases of kidneys, bladder, prostate gland and strictures.

Electrical or other physiological methods are also used by him in skin and nervous diseases, neuraliga, neurasthenia, gout, rheumatism, diseases of the liver, stomach, kidneys, bladder, prostate gland, asthma, bronchitis, catarrh, dyspepsia, and constipation.

Dr. Toel intends to make his methods known throughout the Willamette valley before opening offices in Portland. While he will stay for sometime in Dallas, patients who wish to consult him ought to consult him without delay, for while some cases of cancer allow him to operate at once whent he patients consults him, and send the patient home the same day free of his cancer; in other cases it is necessary for the patient to stay under his care for some time. So better come immediately—a friendly call costs nothing.

Dr. Toel can be found at 619 Washington street, Dallas, one-half block from S. P. Railway depot from 9 to 12, 2 to 5, and 7 to 8, week days and from 9 to 1 on Sundays. Telephone 1303.
