Small Carryover On Wheat Nixes Market Quotas

There will be no marketing quotas for the 1951 wheat crop.

This announcement by the Secretary of Agriculture on June 26 is issued on provisions of the Agricultural Adjustment Act of 1938, as amended, E. Harvey Miller, Chairman of the Oregon State PMA Committee, explains.

The current wheat crop is estimated at 968 million bushels and the carryover from last year is estimated at 456 million bushels, a total of 1,385 million bushels.

This is 30 percent more than the normal supply—the estimated amount needed for domestic consumption and export. Marketing quotas for wheat must be proclaimed when the total supply exceeds the normal supply by more than 20 percent.

Wheat export possibilities for the July 1, 1950—June 30, 1951 crop year are estimated at about 325 million bushels. Domestic consumption for the current year is estimated at 700 million bushels—490 million for food, about 130 million for feed and 80 million for seed.

An announcement on wheat acreage allotments for the 1951 crop will be made by the Secretary of Agriculture on or before July 31.
