Planted for Keeps

These fine heavy-bearing trees were planted in 1897, every tree being set in a hole blasted with

DU PONT DYNAMITE
(A Pacific Northwest Product)

The results are not only indicated by the thrifty appearance of the trees themselves but are shown every year by their heavy yield of fruit.

Tree planting with dynamite is successful because it—
- thoroughly loosens and shatters the sub-soil
- makes root penetration easy
- puts great stores of plant food in easy reach
- destroys fungus and nematode
- causes early maturity
- cuts down tree losses

and pays a heavy return on the investment through increased yields. Ask our dealer for Du Pont Dynamite.

Write for "Development of Logged-off Lands," which has complete details on tree planting and other farm work that can be done profitably with Du Pont Explosives.
