ACREAGE AND PRODUCTION STATEMENTS

Wheat Production and Acreage Statements of Members of the Wheat Production Control Association of Klamath County, State of Oregon.

The following is a statement of the production and planted acreages of wheat in the years 1929, 1930, 1931, 1932 and planted acreage for 1933 of producers of Klamath County who have submitted applications for farm wheat allotments. This publication is made in compliance with the regulations of the Agricultural Adjustment Administration. It is made so that a check may be made on all statement claims, and so that reports may be made to the County Wheat Production Control Association on any inaccuracies which may appear in the statements.

The allotment for this county has been definitely calculated from official records of the U. S. Department of Agriculture, and is 135,002 bushels. This is the total allotment for the county. Therefore, if any farmer receives a greater allotment than his past production warrants, he is thus depriving other farmers in this county of their just share.

Total production figures of those who apply for contracts, together with those who do not, must equal the official production as shown by the records of the U. S. Department of Agriculture. If the county totals are greater than the official totals, it will be necessary to make a downward adjustment.

Any person may make a confidential report if he finds any statements here which he believes to be inaccurate. Such reports should be made to the community or county committee, either in writing or verbally. The reports will be strictly confidential. A farmer whose statements are said to be inaccurate will need to prove his production figures.

Farmers have been asked to furnish evidence of production and evidence of sale, such as threshermen's certificates, elevator certificates, or other records and receipts. Satisfactory evidence will be required of any farmer whose statement is questioned.

The following statements have been condensed to save space. "Acres" represents acres planted, and "bushels" represents bushels harvested. The "three-year average" represents the three-year average acreage and production from 1930-1932, and the "five-year" average represents the five-year average acreage and production from 1928-1932. Farmers should refer any questions regarding this publication to their community committee or to the County Allotment Committee.

Signed: Burrell W. Short,
Chairman County
Allotment Committee,
H. J. Ticknor,
H. J. Beardsley.

TRADERS WAIT ACTION FROM FEDERAL PLAN

PORTLAND, Oct. 19. (AP) — Lack of change in the cube butter price during the late session of the produce exchange was simply a reflection of what was occurring in the open market. Everyone in the trade and especially holders of surplus butter in store, were awaiting definite purchases by the government to relieve the situation. There continued however much unwillingness on the part of speculative interests to accept current values on storage butter inasmuch as every pound sold means a loss.

There was no change in butterfat buying prices for the day.

Market reflected liberal strength for fresh eggs here with prices generally maintained both for buying and selling. Storage stuff remained weak for all sizes.

Turkey Demand Good.

There was a better demand reported for spring chickens because the country refused to ship adequate supplies at the very low values recently forced by a combination of buyers. Hen market was also good.

Heavier supplies of dressed turkeys and especially old crop, were reaching the trade. Demand continued good generally although here and there some operator was trying to force reductions to get ready for new crop.

More than passing weakness was suggested in the market for potatoes at the source. While prices there are being held practically unchanged, very little selling has resulted with rollers moving at reductions.

Tomato Price Firm.

There was practically no distribution here of Oregon-Washington grown cranberries because of the indifference of growers in meeting the influx of eastern berries, which are moving into consumption.

More and better cantaloupes were being received and finding favor here at this period than normal. Dillard stock was still arriving and selling quickly.

Price of tomatoes was firmer to higher here as a result of the rains which usually ruin quality. Sales in general were reported at a nickel advance for the day.

Market was well supplied with fresh crabs again.

More silverside salmon was offered from the Oregon coast with "dogs" being offered by the north.

Cauliflower sales on cars continued to increase with little change in the price.

Dry bean market was weak.

Honey sales continued to gain, both bulk and comb stock being affected.

All country killed meats were quoted at unchanged prices.

Old crop California walnuts were reported offered at very low prices but demand is nil.

Stock Market Quotations

NEW YORK, Oct. 19, (AP)—Stocks broke in a last minute selling wave today and many leading issues touched new lows for the movement after having rallied substantially in the early afternoon. The late dip was attributed partly to the touching off of several impaired margin accounts. Losses of 1 to 4 or more points predominated in a heavy closing. Transfers approximated 2,700,000 shares.
