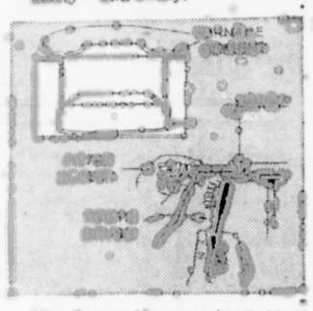
How To Keep Your Oil Heater Clean. A do-it-yourself-wise neighbor of ours services his own pot-type oil heater regularly — and easily.


He cleans the strainer as shown in the diagram—the Metering Valve stem, too. Washes them in kerosene.
Then he scrapes the burner pot to remove all hard carbon. Flange at top of the pot is inspected for air leaks which are sealed with furnace cement.

Of course, using Standard Stove Oil, 100% distilled and clean-delivered, you need only service your heater once a year.
If you have a pressure-type burner, try New Standard Furnace Oil with Thermisol. It stops filter clogging.
Enjoy dependable oil heat comfort with either of these fine Standard Heating Oils. Just call us!
