When Man Weighs Nothing.

Prof. Edward V. Huntington of Harvard university showed by an elaborate mass of figures printed in Science that a man on a train moving along the equator westward at 18,700 miles an hour, or eastward at 16,700 miles an hour would weigh nothing, as measured by an observer on the train.

Avoid Collisions.

Don't collide with anything. The man at the helm must know how to steer away from obstructions and avoid shoals if he would successfully make the ports and havens adown the streamway of life.—Humphrey J. Desmond.
