PROTECTION

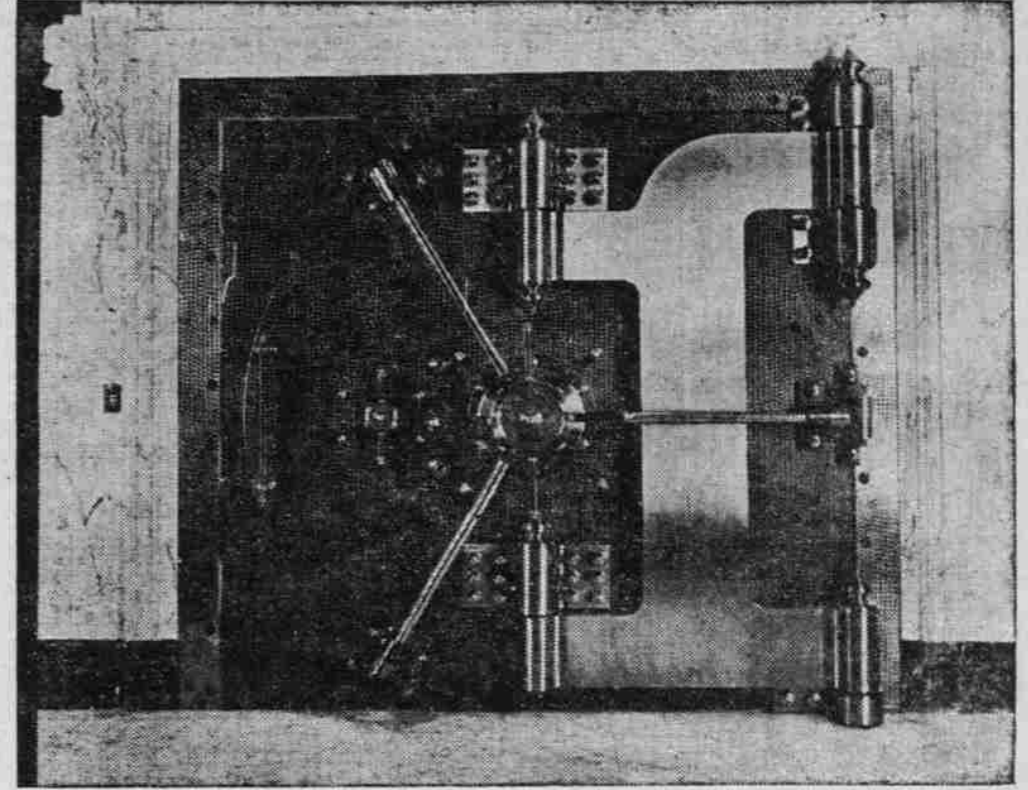

The most eminent vault engineers in the world were retained to engineer this system of safety-deposit vaults, and the result is that the citizens of Portland can pride themselves on having the most complete and secure safety-deposit vault in the world.

The renter of a safe-deposit box in this vault has not only the greatest protection against the skilled burglar and fire, but also has protection against mob violence.

The safety-deposit system, as a whole, is one of the most interesting sights in the United States.

No person possessing a paper of any value or valuables of any nature should be without one of these safety-deposit boxes. The use of a box can be procured as low as \$4.00 per year.

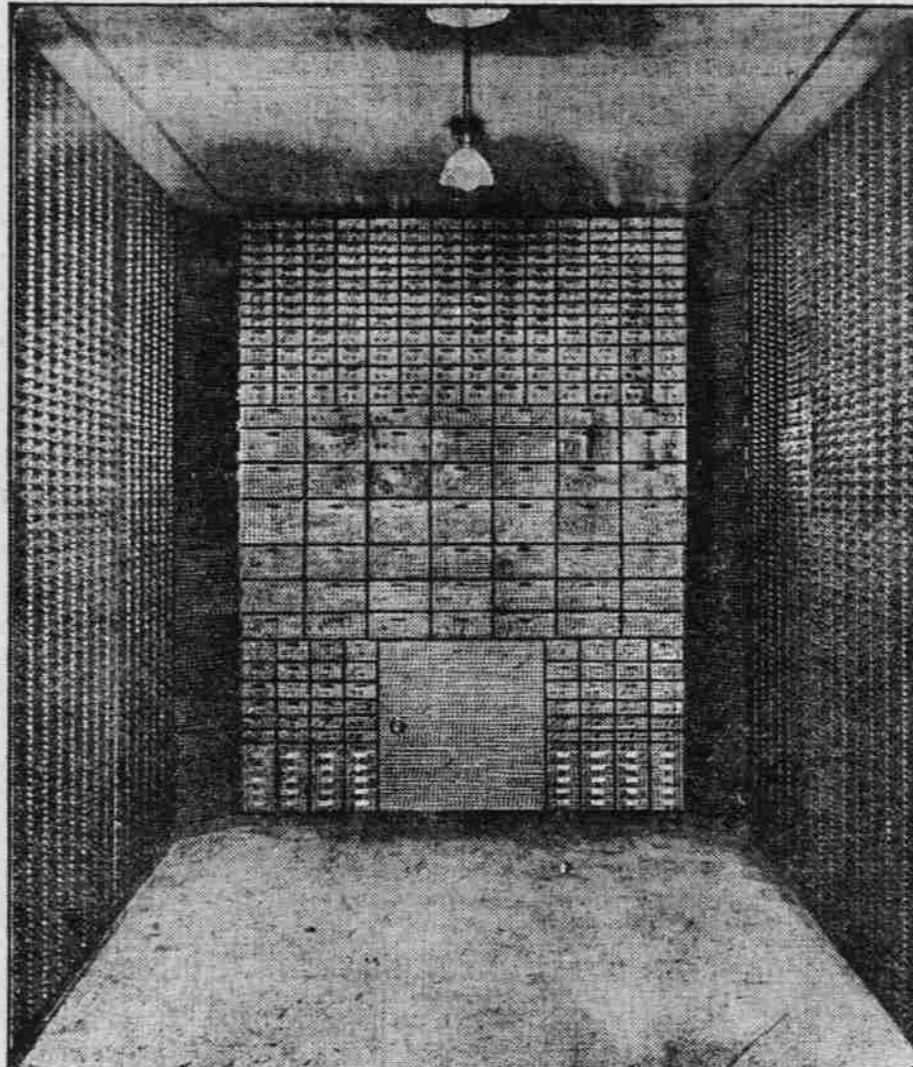

Every citizen of the City of Portland and vicinity should see this most interesting sight and be in a position to show and explain to their visiting friends, from other cities, this most wonderful system of security.

ARRANGEMENT

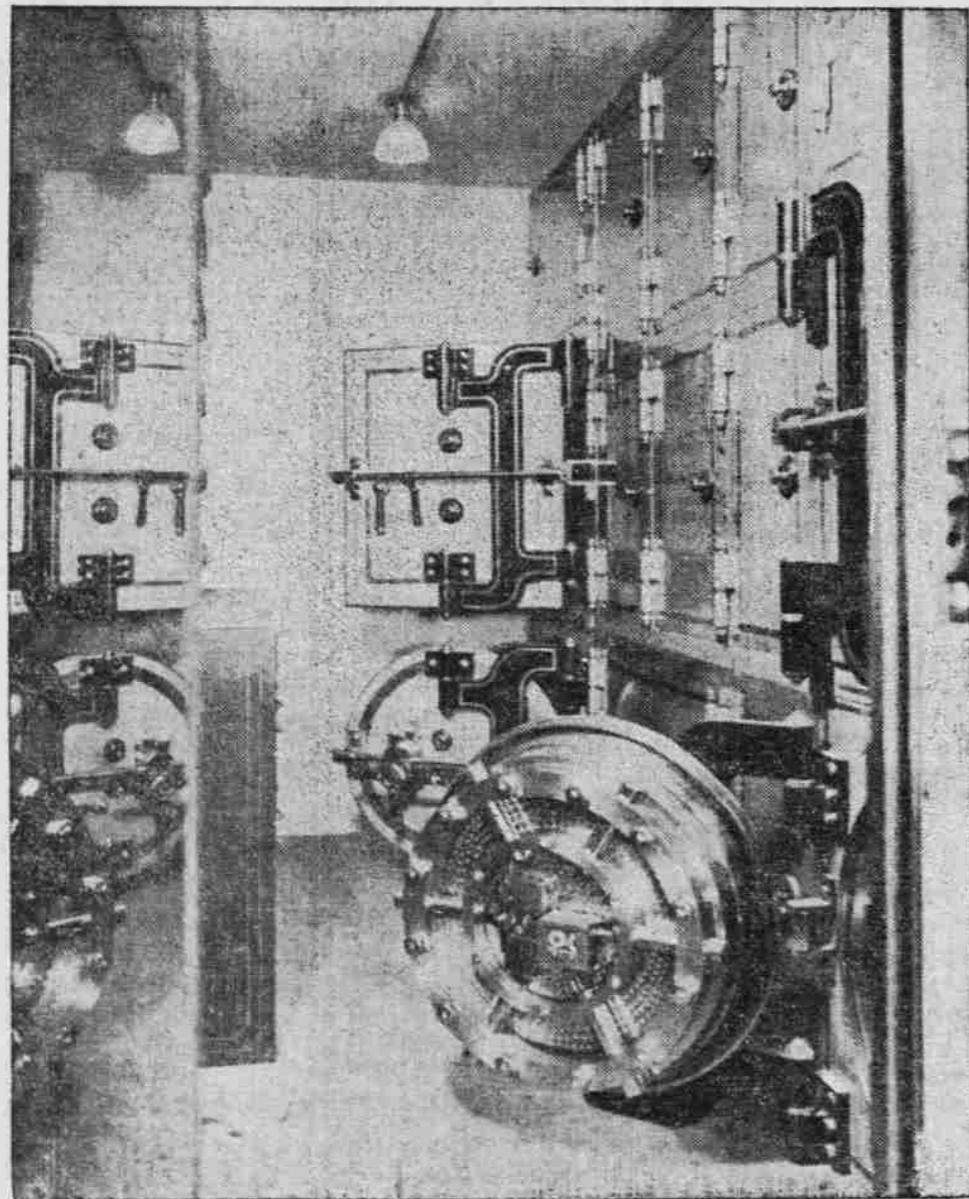

In arranging these vaults and safe-deposit boxes, every want of the public has been considered, not only in its scheme of construction, but in the care and mechanical perfection of the work. The arranging of the safe-deposit boxes, the system of checking keys and many other devices absolutely new and necessary for a perfect arrangement, have been provided. Special attention was given the safe-deposit boxes, as well as the system of individual protection to patrons; and many other points not enjoyed nor permitted in any other plan of arrangement known.

DESIGN

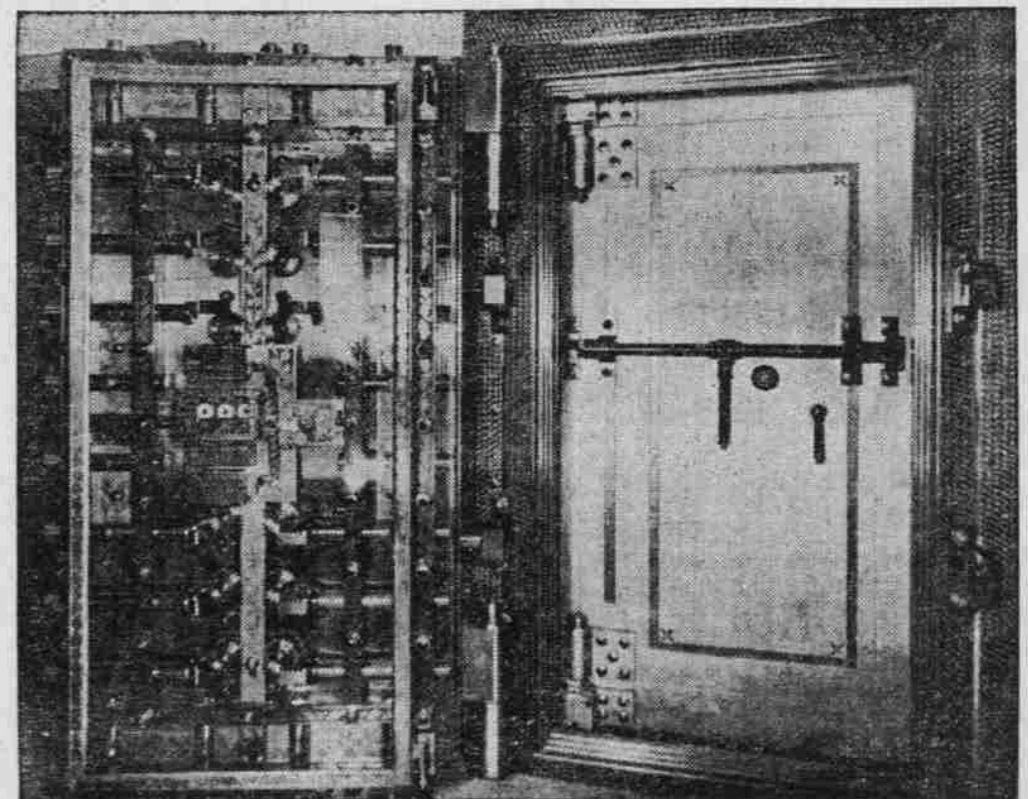

In the designing of this entire work the greatest care was taken and the best systems in the country were inspected and thoroughly investigated before plans were decided upon, after which this magnificent system of vaults was completed and designed by the Herring-Hall-Marvin Safe Company of Hamilton, Ohio, with a view of producing a piece of work not only perfect in construction, but in design as well. How fully this has been accomplished has been appreciated by the many who have visited the bank and viewed this work.

SYSTEM

The system of time locks, combination locks, and the checking and rechecking of these locks by numerous devices, in conjunction with a thorough individual protective system to each safe-deposit box-renter, private booths, courteous attendance, etc., give to this system of vault and safe-deposit construction the very best ever devised, and in advance of any heretofore compiled. The absolute protection given by the coin vaults and individual burglar-proof safes, safeguards the money and securities. The book vaults are perfect in arrangement and for the speedy and accurate handling and filing of the many books and papers necessary to such an institution. In fact, every point has been considered where system could be perfected.
