COMMERCIAL

THURSDAY, March 23, 1882.

March weather has been against our farm ers, and has held them back from spring plowing, so that they are, many of them, quite behind hand with their work. The winter, for two months past, has been miserably disagree get in their crops as early as is desirable.

When we read, last week, of rains in California, the weather was remarkably pleasant here, but we have always noticed that rains in California work their way north; so, sure snough, they have reached us, and given us a continuance of the rams we could well ansp nee with.

The effect of recent rains has been to revive the hopes of California farmers, for their the State; and the San Joaquin valley, that was parched and appeared lost, looks beautiful. It is singular, but true, that one good rain, that comes opportunely, makes a tolerably sure thing of a wheat crop there.

When Californians anticipate a drouth they hold over enough wheat to help them out in case of scarcity. A month ago they felt sure that there would be a poor harvest, and with 500,000 tons of wheat in hand March 1, considered it certain that so much of it would be held over that the tonnage supply would be more than sufficient for all their needs, but recent rains, coming unexpectedly, but not too late to be beneficial, have put a new face on matters. It is now believed that all the surplus grain left over from 1881 will be sold and slfipped, and if so, the tonnage supply will be a small pattern, if sufficient for actual seeds. This has caused a firm demand for yessels and advance in freights, which have recently ruled 5s to 7 6d per ton higher there than here, for as the season's trade winds up with us, we find that our wheat supply dwin dles to less than expectations, while the California supply is considerably greater than was supposed

Well posted parties figure up the entire surplus for export from the Columbia river the ment year at 250,000 tons, or at about 200,000 bushels, while California's wheat export during this harvest year will reach 1,300,000 tons, or over forty-three millions of bushels. The total export from California and the Columbia river will reach 52,000,000 bushels, or load a thousand ships of one thousand tone register.

Exporters here believe that the Californi situation will tone down soon, and that there is no just reason for the advance in freights. As it is, we cannot get ships below 52s 6d to

well get accustomed to, for Oregon and Washington possess as much area of wheat land as to see this coast furnish 100,000,000 bushels of wheat for foreign consumption.

It is rather strange that our own surplus is partly due to the fact that of late years our farmers are turning mere attention to summer fallowing, and trying to keep up the soil by better farming. Another reason has been that the price of pork induced many to feed their hogs liberally last fall and winter, so should not be prosecuted extensively and with that less wheat went into warehouse.

the Liverpool prices that ruled last October, the growth of cities will open a good market our farmers would, many of them, have the for gilt edged products. This is a line of heart-burn because they did not hold on to trade that we should carry to perfection so as their wheat, for wheat would be an average of to be entirely independent of California dai-\$1 to \$1 10 per bushel through the valley if ries. the English market were as good as it was last fall. The way it has remained on a level is rather extraordinary.

During the week just passed we have read in the papers that the English and foreign 31 cents; pork, on foot, 7 to 8 cents. markets were strong and improving. When we ask exporters here the facts, they explain that the market is getting constantly stronger, and where there were no buwers at current rates a fortnight since, there are now many buyers, and they recognize a small advance. The English cablegrams of an exporting firm show that there is scarce any change in the market in four weeks. The latest offer for a cargo for immediate shipment here is 47s 6d per 500 pounds for an iron ship; 47s for a cargo in a wooden ship, and both the Western Belle and Reporter, large wooden vessels, have just been sold—or their cargoes have—

A7s per 500 pound show that there is scarce any change in the at 47s per 500 pound.

On the 10th a cargo was sold for 47s; there has been an advance of 3d per quarter since the 15th. On February 22 an Oregon cargo was sold in England at 51s 9d per quarter, and on March 22 another cargo was sold for 51s 6d, a slight decline; both those cargoes had arrived there. The fact is that the English and European grain trade is firm and brisk sales are made, and we may hope that the markets will not weaken There has been an advance of five cents per bushel at New York during the week.

Freights in California are held well up to 60s per ton to United Kingdom, while wooden ships have been chartered here at 50s, and at present the outside figure would be 52s 6d, and might be 45s, only that there is a demand in California because they have not enough ships on the way to carry off their surplus. On Tuesday the Crown Prince, in this river now, was chartered in England, reported to e for less than 52s 6d.

To show what an ample supply of tonnage ve have on hand and on the way, there are now seven good ships at Portland, five of which are receiving freight, and two are seeking charters, and are very anxious, as no one wishes to take them at over 50s. Besides these there are on the way 32 vessels with capacity to carry 50,000 tons, which, with 7 now in port, make 60,000 tons of shipping, while we have not nearly that much Firm. wheat or flour to send away. In view of this fact, orders have been given for several vesable, and farmers must crowd their teams to s la bound here not to enter the river, but to go to San Francisco, still no one doubts that o :r tonnage supply is superfluous. On Tuesday the British bark Emily Chaplin arrived, without any previous notice.

On Wednesday the English market opened strong, but a later cablegram says there was a disappointing feeling at the close.

Buyers give the range of this market at \$1.625 to \$1.635 per cental for good Valley wheat, but we have heard of \$1.64 being paid for a round lot. Any person desiring a lot of good wheat to fill up a ship would be apt to bid up to get it. We hear a rumor that \$1.65 was offered for 1500 tons choice Valley. The for a round lot. Any person desiring a lot average figures can be taken as \$1.624 to \$1.63 in ordinary course of trade.

We notice from the returns of cargo arriv ing in England, published in trade journals, that Oregor wheat is arriving in fine order almost without exception, while California grain cargoes frequently come to hand with claims for damage; also our wheat is quoted at 6s per ton more than best California, and while we at this moment have 6s difference of quality in our favor, and freights are 5s to 7s 6d cheaper here, San Francisco quotations give a better price for wheat than we are able to give at Portland with almost, if not quite 10 cents per bushel shown in our favor. This is an old story with us, for the WILLAMETTE FARMER has for years shown the same state of things. We ought to-day to have \$1.75 per cental for wheat if these figures are correct, and we challenge any one to deny their cor-

Oats are no longer in demand for shipmen to California. Ample rains give assurance of coming average crop. The local demand holds them at 574 cents per bushel, and rathe weak.

Potatoes have been shipped in such quan tity that the California market is oversupplied; prices here are 75 to 80 cents. It is not impossible they may rule lower if the new crop there comes on well.

Latest news from California reports a glut in the potato market, as shipments from this region exceed all expectations; 20,000 sacks arrived from Portland within eight days, and that overdid the business and sent prices

Hops have been for three consecutive years

whenever an extra choice lot of dried fruit comes to market it finds a purchaser at fair California, with much more reliability as to rates. This line of production can improve yield, so the world may expect in a few years its profits more by improving its quality than in any other way.

All pork products are well up, but we hear that dealers here have checked shipments to does not show more present increase, but that this city for the reason that the supply on hand has been overabundant. There is good inducement for all farmers to make pork production a scaple business.

Dairying becomes more a regular trade than heretofore and there is no reason why it scientific skill. Farmers should remember If the present freight rates were backed by that we are now in a developing stage and

Eggs are down to 15 cents-very plenty. Chickens are lower-\$4 per dozen.

Veal is worth 7 cents per pound for good carcasses; sheep, 31 to 4 cents; beef, on foot;

Australian sool, quiet at 456,46c. Cape wool ranges from 296,33c as to quality. Carpet wools are quiet and remain unchanged.

The Cereal Crop of 1881.

The cereal estimates of the Department of Agriculture for the crop of 1881 are comple ed, showing a more general reduction in yield than for many years. During the five preceding years no one of the grain crops met with serious disaster. In 1875 the wheat product was reduced, while the corn crop was above an average. In 1874 the reverse was true, wheat making an average crop and corn true, wheat making an average crop and corn nearly as bad a failure as in 1881. In 1869 corn was a comparative failure, while wheat produced more than an average yield. In no season since the inauguration of crop reporting has there been so general disaster, involving corn, wheat, barley, buckwheat and rye, cats alone being exempt from loss.

The aggregate of corn estimates is 1,194, 916,000 bushels, grown upon 64,262,025 acres, or 18 6-10 bushels per acre. This is a reduction of 31 per cent. from the crop of 1880.

The wheat crop aggregates 380,280,000 bushels, a reduction of 22 per cent, grown upon 37,700,020 acres, a yield of 10 1-10 bush-

usnels, a reduction of 22 per cent, grown upon 37,709,020 acres, a yield of 10 1-10 bushels per acre, the lowest rate of yield yet reported for the entire crop.

Rys—20,704,950 bushels, a reduction of 27 per cent; area, 1,789,100 acres, yielding 24 7-10 bushels per acre.

Barley-41, 161, 330 bushels, a reduction of observed the second of the sec

acre.

Buckwheat—9,486,200 bushels, grown on 828,815 acres, yielding 11 4-10 bushels per

Hops have been for three consecutive years at a fair price and we hear of more hop-yards to be planted. No man with limited means can afford to invest all in so precarious an article, for while we are reasonably certain to realize fair crops with judicious handling, the porters, or soon would be.

The weak foreign market is based somewhat upon the general expectation of a good harvest all over the world next summer. From all quarters there is report that appearances favor a good crop. Another reason for low figures is the unusually great surplus from this coast, but that is a matter they may as

FIXING COMPENSATION. - The work of weighing all mails passing over the various railroads in this county will be commenced on April 1st, and be continued for 30 working days, in order to estimate the amount the gov-ernment shall pay for carrying said mails. The calculation made will be the basis of the remuneration to be allowed the railroad com-panies for the next four years

DIED. -Mrs. Ira Goodcough, one of Ore gon's pioneer women, died at her residence on Yambill street at 9 o'clock pesterday morning. Mrs. Goodbough had been suffering for some months past with Bright's disease. She leaves four children, two sons and two daughters, all of whom are grown up.

Eastern Cranberry Vines FOR SALE FROM A. J. BURR'S BOG, Olympia, W. T.

Send money by registered letter, money order, or by Wells, Fargo & Co., with directions for forwarding,

In 1877, I planted three 50-foot beds of the New Jer-sey cranberry vines. I planted them eighteen inches apart, each way; sanded one bed six inches deep, one three inches, and the other I planted on the natural oog.

The sanded beds yield but few berries, and are dying the last of gathered from the natural bed two

The sanded beds yield but few berries, and are dying out. In 1880 I gathered from the natural bed two large sugar barrels full of herries, and only one barrel from both the sanded ones. (I sold the three barrels in Olympia for 850. They wire equal to about five ordinary cranberry barrels.)

Muck or peat land that overflows until about the first of May is the best for the cranberry. Keep the water on the vines until the late frosts are over, and you will have a good crop every year. If not subject to late frosts, water can be dispensed with.

Plant by dropping the vines eighteen inches apart, each way, and forcing into the muck with a forked stick or wedge shaped dibble. He out the weeds the first year; pull them out by hand the second, and the third year they will take care of themselves.

Plant in May and October.

A. J. BURR.
