

POWER HOUSE SURVEY.

Site for New Plant to Be Selected When Pres. Strahorn Arrives.

W. E. Weed, foreman of the Electric and Water companies, is conducting the preliminary survey this week for the new power house soon to be built. Engineer Clarke, of Jues-

sen & Clarke, has immediate charge of the survey. The power plant will probably be located on the West Side, but the exact site will not be decided upon until President Strahorn arrives. The object is to have all the necessary data in hand when he arrives so that active construction may proceed without delay.

President Strahorn sailed from

Liverpool on the Cedric which arrived in New York last Sunday. He is expected here about the middle of May.

New Photograph Gallery.

B. D. Postlethwaite, of the firm of Reed & Postlethwaite, Baker City, photographers, was in the city yesterday making arrangements to estab-

lish a branch gallery here. The branch will be located on Mill street opposite the Golden Eagle.

The celebrated Gund's—"the beer of good cheer"—always on draught at Dunphy's The Club.

Big Mill Will be Built on the South Pole This Year

WHY DON'T YOU BUY SOMETHING GOOD

You all know the **North Pole** mine is the great mine of Oregon and one of the world's greatest gold producers.

The **South Pole** mine joins the North Pole at its end lines and owns jointly three claims with the North Pole, and has in all, 4986 feet on the North Pole vein. The North Pole is valued by this camp at \$10,000,000. Don't the **South Pole** look as though it ought to be good at present prices?

There is over 2,500 feet of development now on the great North Pole vein on the **South Pole** ground. Tons upon tons of ore above the various tunnel levels. The great North Pole is over 1200 feet deep at the very end lines of the **South Pole**. Is this not a legitimate mining proposition? The one ore shoot of the North Pole mine is valued alone at \$5,000,000. Do you suppose this stops at the end lines of the **South Pole**, because there is a different ownership of the ground? This stock will advance in price and its advance warranted by the additional ore reserves blocked out. The **South Pole** should make, next to the North Pole, the greatest paying mine in Oregon.

This mine is being steadily worked and will continue to be. The mining is not done on paper.
