

**HANDICAPPED**

This is the case with many Lakeview People.

Too many Lakeview citizens are handicapped with bad backs. The unceasing pain causes constant misery, making work a burden and stooping or lifting an impossibility. The back aches at night, preventing refreshing rest and in the morning is stiff and lame. Plasters and liniments may give relief but cannot reach the cause if the kidneys are weak. To eliminate the pains and aches of kidney back-ache you must cure the kidneys.

The following statement should convince every Lakeview reader of their efficiency.

Mrs. I. H. White, 518 W. Hamilton St. Medford, Or., says: "Twice I had attacks of kidney trouble. A dull pain settled in my back and I got dizzy and nervous. There seemed to be no rest for me day or night. I was all run down. I tried Doan's Kidney Pills and I soon found that I had the

right remedy. They acted quickly and brought the best of results. I don't believe Doan's Kidney Pills can be equalled in curing kidney trouble. They gave me a permanent cure and I haven't had any sign of kidney trouble for years."

Price 50c, at all centers. Don't simply use for a kidney remedy—get Doan's Kidney Pills—the same that Mrs. White had. Foster-Milburn Co., Props., Buffalo, N. Y.

It takes about so much fuel in the shape of food consumed to keep an animal's body warm. For this reason it is a matter of economy to give the stock shelter in the coldest weather in order to reduce the feed bill referred to in a moment.

Mutton sheep should never be mixed breeds on the farm. Get one good mutton breed, stick to it and develop to the highest notch possible. A lot of mixed lambs never bring the highest price on the market. It is those of one breed, uniform in size, shape and condition, that get the big money.

**Vacation Precautions.**

When you are planning your vacation, if you are going to a new locality, take as much pains to learn about the healthfulness of the place as if you were about to buy a home there. In the few weeks of the summer's outing a family may sow the seeds of illness that will last for months, if it does not prove fatal. So, when writing for the price of rooms and board and the prospects for catches of black bans, ask the summer hotel proprietor what is the source of his water supply, how he disposes of his garbage and other refuse and whether he screens his house against flies and mosquitoes. If you take pains to do this you will not only be safeguarding yourself and family against typhoid fever and malaria—probably the most prevalent of summer caught diseases—but you will also be giving the resort proprietor a practical lesson in sanitation and good citizenship.

**USE OF SLAG IN ROAD BUILDING**

**Better Than Stone For the Macadam Highway.**

**SPARE ROLLER, SPOIL ROAD**

**Plenty of Water Absolutely Necessary in Manufacture of Slag Roads—Slag is Cheaper, Lasts Better Under All Conditions and is Easier to Get.**

To construct a highway correctly proper excavation should first be made and the subbase thoroughly well rolled with a roller of at least ten tons in weight. This should be done no matter what kind of base material is used. However, in the construction of a slag road, in order to obtain the very best results, it is necessary that the loose slag be spread on the subbase to a proper depth and then thoroughly rolled from time to time as the work progresses.

During such procedure it is recommended that the road be kept well wet with water, if water is available, and in finishing it is only necessary to put on top of the slag base about two inches of slag screenings, which contain dust and slag particles as large as one-fourth of an inch, which, like all cement, is inert in the dry state.

This likewise should be thoroughly wet and well rolled. In fact, the top should never be put on except with plenty of water and thoroughly rolled. This is necessary because of the natural cementing qualities of slag, and in order to get it properly bound this material must be rolled to eliminate as many voids as possible.

A slag road built under these specifications, instead of deteriorating, as is too often the case with most other road metals, will gradually improve until the entire roadbed becomes a solid mass, thereby giving practically a concrete road.

It is indeed to watch road forces at work, not only along country highways, but more especially in the cities.

CUTTING SLAG FOR ROAD WORK.

where there are macadamized roads, for the waste of time and material is something appalling.

Streets are repaired merely by throwing loose slag or some other material into the ruts and, instead of finishing the job by rolling and compacting the material, making it more or less permanent, the loose material is allowed to remain, and vehicles passing over it, instead of compacting the filling, will cause the particles to grind into dust, which will be carried off either by the wind or by rapidly moving automobiles, leaving the street in as bad condition as before it was repaired.

Slag is the one material that not only is cheaper as a rule than all other road bases, but it is available in large quantities and at all times, regardless of the weather. The rainy season has no effect on the shipment of slag, as is the case in the rock quarries and gravel pits, and by reason of the fact that it is usually loaded at points where a number of railroad center cars are available when such is not the case at quarries and gravel pits located exclusively on one line.

The advantages to be derived from the use of slag in building highways may be analyzed as follows:

It is a natural cement rock. It will cement together if properly compressed by wetting and rolling. It is, as a rule, vastly cheaper than any other road material. It is available in large quantities and at all times, regardless of weather conditions. It is an impervious material. It is considerably lighter in weight than stone or gravel, consequently a great saving in freight is effected where distances are equal.

**A New Road Material.**

A new road material designed to stand hard usage from automobiles is being tried by a Swiss engineer, W. Erlich, and is said to consist of a mixture of broken stone about the size of a hazelnut, but not limestone, with a binding material whose composition is not divulged by the inventor. In the present process the stone is heated at first from 100 to 150 degrees C. and mixed at this temperature with the melted composition. When in use the mass is remelted in order to put it on the road. A road roller heated to a rather high point is passed over the surface, the roller weighing about six tons. Reports state that a very good road surface can be obtained in this way.

**BRIEF DAIRY LORE.**

The calf stall should be plentifully supplied with good clean, dry bedding.

No dairyman should forget that his barn is a place where human food is produced.

Observe with care and note as a first point that a cow should have a large and ample sized body.

A brush or old whisk broom is handy to brush off loose hair and dirt from the udder before milking.

What the dairy industry needs most is an improved breed of dairymen instead of a new breed of cows.

The choice pure bred calf would be a splendid gift for either the boy or the girl.

To a certain extent nature provides for the comfort and food supply of the dairy cow in the summer time, but if we depend too greatly upon nature in the winter time we may find our returns somewhat unsatisfactory.

**KEEP STABLES CLEAN.**

**Filthy Horse Stalls Almost Certain to Produce Disease.**

Light, air and dryness of bedding are the requirements for a sanitary horse stable. In most cases the stable is at fault. It will be ankle deep in wet manure and soggy trash. The man who permits such a condition to exist will use the currycomb and brush only when he feels like it.

Muddy roads, filthy stable floors and lack of proper care of the horses' feet are nearly certain to result in an attack of "scratches" some time during the winter.

Scratches is an inflammation resulting from dirt, filth and cold, aggravated by driving or working in the mud. It is hard to cure. Prevention is easy compared with curing the cracks and raw sores that accompany the irritation.

Briefly stated, this trouble may be prevented by keeping the stall clean and removing the mud from the horse's feet. If there are no holes to collect urine and liquid filth in the stable floor, if manure is promptly removed and plenty of dry bedding is provided, there will be no appearance of scratches.

**SHOTES THAT THUMP.**

**Lack of Exercise and Damp Beds Often Cause the Disease.**

When we have wintered fall pigs in the open field with a run of ten rods to feeding place we have never had a pig affected with thumps, but when running in the feed lot and sleeping in a nearby hog house that was closer and warmer we had trouble with thumps, writes G. P. Williams in the National Stockman. The longer these shotes are left in the drove the worse they thump and sooner or later die. We have found two treatments that proved successful.

The first treatment is to take the affected pig from the drove as soon as he

At one time the Chester White was rated as the largest breed in the United States, but the tendency of modern breeding has been toward the production of a finer boned, smoother and smaller hog than that of the Poland China. In general conformation the Chester White is similar to the Poland China in size, though it is commonly claimed that it is a larger breed. The face is straight, and the snout is usually a little longer than that of the Poland China. In general conformation the Chester White is similar to the Poland China, though often longer in body. The illustration shows a prize winning Chester White boar.

is observed thumping and sell to a shipper, even though a special trip be necessary to take him to the yards. The other method is designed to be effective and consists in turning the affected shote into a field with a small pen only scantily supplied with bedding. The pig generally does a good deal of fretting along the fence in trying to get out, and in a few days this exercise and fresh air will often be found to have stopped his thumping. Dust, lack of exercise, sudden change from warm pens to outside drafts, damp beds, etc., are common causes of thumps, and remedial agencies must be along the line of correcting these details.

**Watering Cows.**

Where water is before cows constantly it is interesting to note how often they will take a few swallows, then go ahead with eating or chewing cud, says Hoard's Dairyman. It would be hard to estimate the benefit of having water before the cows in winter when it is warmed to the temperature of even a cold barn over the system of turning cows out to drink once or twice a day from a tank that is too often frozen, or even if the water is fairly warm the atmosphere is too cold for cow comfort, and she is compelled to drink far too much at one time, thereby chilling her and diverting energy that should be used in making milk to bringing her temperature up to normal.

**The Best Automatic Farm Gate**

**Catarrh Cannot Be Cured.**

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you must take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly upon the blood and mucous surfaces. Hall's Catarrh Cure is not a quack medicine. It was prescribed by one of the best physicians in this country for years and is a regular prescription. It is composed of the best tones known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing catarrh. Send for testimonials, free.

F. J. CHENEY & CO., Props., Toledo, O.  
Sold by Druggists, price 75c.  
Take Hall's Family Pills for constipation.

**\$1000 Dollars Reward**

We, W. F. Detert and W. D. Duke, own all the cattle branded 70 or XL and formerly owned by Cox & Clark and the Herford Land & Cattle Company. These cattle are now on the ranges of Modoc and Lassen Counties. For information leading to the arrest and conviction of any party or parties illegally branding, killing, driving off or disposing of any of the above cattle we will pay ONE THOUSAND DOLLARS and the costs of arrest and prosecution. Send all information to F. H. Day Alturas, Modoc county Cal., or to us at Latrobe, El Dorado County, Cal. If guilty party might escape, promptly notify the Sheriff of the county in which the illegal act was committed and advise us by wire at our expense.

W. F. DETERT,  
W. D. DUKE.

**Strayed or Stolen**

Strayed or stolen from Abert Lake on the 15th of March, three horses of the following description:

One grey gelding, branded 2L and horseshoe on left shoulder; one grey four-year old mare branded quarter circle lay on right side; and one bay mare with white hind leg, branded quarter circle D upside down.

A liberal reward will be given for the recovery of same by Jerry P. Egan and Dan Sullivan of Plush, Oregon. D 18

**\$1,000 REWARD**

The Oregon or Florida and Nevada Live Stock Association, which the members will give a reward of \$1,000 for a bad conviction of a horse-stealing horse, cattle or mules belonging to any of its members.

In addition to the above, the undersigned offers on the same condition \$500.00 for all horse-stealing horse-shoe bars on both or either w. w. Brand recorded in eight counties, Range 7, Harney, Lake and Crook counties, horses reported when sold.

None but grown horses sold, and only in large batches. W. W. BROWN, Plush, Oregon.

**HOW TO PREVENT BILIOUS ATTACKS**

"Coming events cast their shadows before." This is especially true of bilious attacks. Your appetite will fail, you will feel dull and languid. If you are subject to bilious attacks take three of Chamberlain's Tablets as soon as these symptoms appear and the attack may be warded off. For sale by all dealers.
