Royal Baking Powder

Highest of all in Leavening Power.—U. S. Gov't Report, Aug. 17, 1889.

ABSOLUTELY PURE

have to some extent with fruit. Peaches are reported in your columns as damaged by frost, and so they are—on low land, but trees on the upland are bearing well and this promises to be a good year for them where they escaped the frost.

One orchardist who groaned in spirit over the prospect of having to spend several hundred dollars to thin his trees of surplus fruit, has had his fears lightened by the very unusual occurrence that the trees have thinned themselves very "judiciously" in many instances, while in other cases there has been "a falling off."

A GOOD APPLE AND PEAR CROP FOR 1890.

Last year the apple and pear orchards of Western Oregon were so generally devastated by the apple worm and fungus that between the two there were not truly perfect apples to be had. The fungus made fruit scabby and gnarled and so imperfect that the codlin moth left us was rendered unsalable by the fungus growth. Only very lately has it been discovered that we are measurably free to-day from these terrible pests that damaged Oregon orchards hundreds of thousands of dollars in 1889. I have examined old and young orchards near Salem and on the Santiam and after minute examination have not been able to find a single apple infested with a worm. While some appeared to be so, when cut open they showed merely a scar on the surface, such as many insects may cause. The fruit is generally smooth and perfect as regards fungus, for while occasional specimens are a little troubled the general average is in good shape. If the orchardist would thin their fruit and pluck off all that is small or imperfect many will have good apple crops and there is every reason to believe they will have a good market for them.

It is said that the codlin moth's ravages are to be seen in some other orchards, but I have not found them after very careful examination of several large orchards. I am inclined to believe the very wet winter was too much for the insect. While they resist cold it may be that they cannot resist excessive wet. If this is true it is possible Oregon can grow fruit to advantage much of the time. In any case they can use proper methods, as stated above, and grow good fruit by use of proper precautions and at small expense.

The absence of these pests this year shows that Oregon possesses great advantages over California for growing fruits native to our latitude. It offers encouragement for many to undertake fruit-growing as a business, for if they conduct operations properly and thoroughly they can win great success.

It is true that in regard to standard prunes, some varieties, in some instances, have thinned themselves down to a small yield. The Italian holds out well, and is a variety that sticks to the tree in superabundance. The Petit, or French prune, has fallen off to an extent never before known. It is undoubtedly due to the very warm days a month ago that fruit has been affected as related above.

The fruit grower has a promise of good crops for 1890. Rain began while this was being written and it is probable the showers may continue long enough to accomplish good results. We have a neighbor whose enterprise and skill should be a lesson to us. It is only by constant improvement and progress that we can hold our own and we cannot afford to let Californians excel our work. At least we must equal their work, and if possible lead off in excellence and skill of our own.

INDUCEMENTS ARE GOOD.

There is every inducement for the Oregon fruit-grower to improve and be enterprising. Our fruit takes the lead in the world's markets and we have a soil and climate that enables to make our products reliably superior. We wonder at the semi-tropical products of California, but our own production—when well handled and cultivated—furnishes as choice specimens of the fruits of the temperate zone as the world can afford. We can produce them in luxuriance and with an excellence that cannot be excelled. The fruit-grower must be educated to his profession and must constantly study to learn more and more of those wonderful secrets that nature is so ready to impart to whoever brings honest effort and steady labor to the business of growing superior fruits. The orange, lemon, pine apple and fig, are in no way superior to the Oregon apple, pear, peach, grape, plum and prune.
