Mr. Gilbert found such institutions popular in the smaller cities in the East. They are kept open from 7 to 8 o'clock in the evening to receive deposits in amounts of from \$1 and upwards. These deposits are largely from working people and children, and interest is paid on them.

Mr. Gilbert brought with him a sample of the soil in which the famous Kalamazoo celery is raised. It is black as lamp black and very light, which latter quality makes the wonderful growth and crisp succulent fibre. He also brought a sample of Portland cement, which has been discovered in the bottom of some small lakes in Michigan. It is proving a bomanza.

Mr. Gilbert also looked up the auto obile. He found the factories a year behind in their orders and the demand growing. He says the towns and small cities have greatly improved in the matter of ornamental homes. Public ownership of water and light plants are po; ular, and greatly faciliate sprinkling streets and beautifying homes and publie grounds.

Money is more plentiful than ever known, and as a result interest is very low, with money hunting safe investments on every turn. This of itself is not a good sign of business revival, but as the crops are immense and the country largely agricultural, the people are enjoying good times.
