RESTRICT IMMIGRATION; ADVANCE AMERICANIZATION

THOSE WHO have read in the symbol of the Statue of Liberty that foreign races and people shall have a perpetual franchise individually and collectively to enter this new world democracy, should begin to revise their opinion before the alien license permitted in America under this franchise of sentimentality develops into a cancer with potential possibilities to destroy the tenets of America's political gospel of justice and liberty, freedom and equality. In the maelstrom of unrestricted immigration the human dregs and dross of Europe have flowed freely through our gates effecting a gradual process of contamination, polluting the purer strains of the American people. The selfish forces bent on battering down constructive restriction of quantity and quality immigration, should read the ominous signs of the foreign influence that is gradually changing the American aspect of our bigger cities where thronging millions of foreign people and races have established communal units, where foreign customs, foreign habits and foreign tongues hold sway to the exclusion of everything indicating an American neighborhood.

While the American people are demanding that a restrictive immigration policy be maintained, more attention should be given the crying need for constructive Americanization work throughout the nation. There are undoubted values; high aspirations and ideals among those who are living in isolated racial group centers. These values must be redeemed. The Americanization movement is America's agency of redemption. Are you backing the Americanization movement?
