

Among some of the interesting headings of the outlines is one showing "What Tuberculosis Does," under which the information is given that 200,000 people are killed each year by tuberculosis; that one-third of all deaths between the ages of 18 and 45 are caused by this disease; that it costs over \$500,000,000 a year to the United States; and that not less than one million people are sick with it all the time in this country. Some of the other headings show what tuberculosis is; its predisposing and immediate causes; its commonest early symptoms; how it may be treated, cured and prevented; and what is being done in the movement for the prevention of the disease. Under the last heading an enumeration of the various agencies, including the sanatoria, anti-tuberculosis associations and open air schools engaged in this work is given.

Copies of the sermon outlines will be sent to any clergymen or other interested person, free of charge on application at the office of The National Association for the Study and Prevention of Tuberculosis, 105 East 22nd Street, New York City.

AGRICULTURE FOR GRADES

OUTLINED BY ALBERT H. GILLETT *Teacher of Agriculture*

Boys Who Have Farms and Boys Who Expect to Be Farmers Should Have an Agricultural Training

MANY are the boys in our Indian schools who should be encouraged to take agricultural training. Most of the Indian boys have allotments that will prove of great value to them if they get an understanding of how to develop the natural and agricultural resources of the farm. To make a success of any line of business a man must have a thorough understanding of the principles underlying his trade or profession.

We have the wealth of great minds at our command in book form. Scientific agriculture as recorded in books is no longer ridiculed by successful business farmers. Agricultural papers and magazines contain many hints and suggestions that are invaluable to the trained agriculturalist. The man with a trained mind is able to apply the hints and suggestions to his individual farm.

How shall the Indian boy get his training in agriculture? He must enter upon a good course in agriculture in an educational institution
