

M. Bellesortes of Revue des Deux Mondes of Paris. M. Bellesortes is making a tour of the world in the interest of the Revue, similar to the one which he made about ten years ago. M. Bellesortes will return to his native country from the Pacific by way of Japan, which he also visited about ten years ago. The distinguished guests spent an interested and interesting day at Tulalip. During the visitation a match game was in progress between students of the Mount Vernon High School and the Indian students of Tulalip. This fact prompted the question as to whether or not the baseball fever has, like Caesar, divided Gallia into three parts; to which query Monsieur vouchsafed the information that they played little baseball but a great deal of football.

THE NEED AND OPPORTUNITY OF STUDYING

WE expect to give years of our lives to studying almost every question; but most of the young people start out for themselves with no more preparation than would make for a walk in the country or an afternoon shopping. The fact is, he or she is depending too much on the other people, without an idea of their future difficulties. Although we may find life a little easier by diverting so much work away from our own brain and hands, we should stop and realize that we are losing the chance of our own development. We are getting to lead machine-made lives. This is essentially true in most schools; students do not make the best use of their time in studies or work. They are depending too much on the teacher for their lessons. We must plan beforehand what results we expect from certain studies or trades.

It is inevitable in the development of a strong character and mind that we should desire the help of the teacher or instructor on certain lines of study and trade. We must conform in a measure to the conditions and the needs of the people in the communities from which we came.

We cannot achieve the best for the individual and the race if we live on other people's efforts, we cannot possibly know what we really are without experimenting with our own life, and developing it through work,
