
OUR BUDGET OF LORE

LOCAL AND OTHERWISE

Did anything happen to remind you that April the 1st was "All Fools' Day?" We are often reminded of this date by our dear friends.

On another page will be seen the program of the Haysville District Sunday School Convention, which was held in Chemawa on March 26th.

Supt. Wadsworth has workmen at the task of reconstructing the lavatory for Brewer Hall. Work has been progressing rapidly since good weather set in. When completed the lavatory will represent an improvement which was greatly needed.

William Lovelace, formerly assistant engineer at Chemawa but now engineer at Ft. Simcoe, paid Chemawa friends a brief visit recently. He was in splendid health when here and spoke in highest terms of his present position and location. He likes Ft. Simcoe, the people, and his job. A number of former Chemawans are working there and he reports them all well and doing well.

Not a great many days ago we were visited by Miss M. Burgess, who a number of years ago had charge of the printing department at Carlisle during the schooldays of Mr. Smith and while here was the guest of the latter and Mrs. Smith. Miss Burgess at present is making her home in Chicago. She passed through Chemawa while on a tour of the Pacific coast. She intended to go north from here into Canada, thence to her home in Chicago.

Dr. Charles M. Buchanan, superintendent at Tulalip, arrived at Chemawa on March 13th to assist in the work of starting the new course of study, he having been appointed by Commissioner Sells to look after this work at Chemawa and nearly all of the schools in the state of Washington. The Doctor found many old-time friends here who were pleased to greet him and who enjoyed visits with him while he was here. He proved, as everyone knew he would, thoroughly versed on the various phases of the new course of study and had a most entertaining way of explaining matters and clearing away obstacles. As he had been one of the men chosen from the field to assist in outlining the course he was able to explain everything from the standpoint of first hand knowledge. As matters now stand he is a very busy man, for he still has the duties as superintendent of his own school to look after, added to which is the immense amount of field work that it has become his special mission to supervise.
