

WORK AND ITS BLESSINGS

(Continued from page 1)

spirit and you will rob it of its drudgery. Resolve that you will like it as long as you are obliged to do it, and that very mental attitude will be a step in fitting you for work for which you may be especially adapted. When you work in a grudging, unwilling spirit you may discourage and weaken the very qualities in yourself that would enable you to lift yourself out of an uncongenial atmosphere into the one for which you long.

If you have a level head, perseverance, and the right spirit, you can make success enough even in the thing you do not like to enable you to open the door to your real work—the work wherein your heart lies. Good work never goes unrewarded. The willingness to do right, the spirit which never tires trying to do its best, which puts willing effort into the humblest and most disagreeable task, is the spirit which accomplishes big things. There is no other road to happiness than work.

Students, and readers, the railroad wreck which occurred near Chemawa not long ago was caused by reason of two men—conductor and brakeman—of the train which was run into failing to realize their responsibility and attend to work entrusted to them and the result was the total loss of thousands of dollars worth of property and the maiming of several men for life. The habit of carelessness and lack of responsibility is seen often at Chemawa, as elsewhere, and we wish to impress upon our students especially, as well as readers in general, that such habit grows and is so dangerous that sooner or later the careless, irresponsible and indifferent person will be brought to grief. Do your work well, give it care, feel its responsibility, and you will thereby avert many horrible tragedies and add to your happiness and usefulness in the world and your fellows will seek you out and call you blessed. By this sort of work should you be known.

DOMESTIC SCIENCE NOTES

The Juniors and Seniors will be the next class in the domestic science.

The dining room has had a coat of white enamel that adds greatly to its appearance.

The girls have finished several pieces of fancy work in the domestic science, but would have liked to complete the sets they started,

The girls receiving the highest averages were Jessie Cleveland and Rebecca Carpenter. Henrietta Chamberlin and Lillian Gauthier tied in the third highest average.

Last week the Sophomore girls were very busy. Both divisions have given a demonstration dinner and

invited guests to dine, and also to show how much they have learned since they entered this department.

The little D. S. orderly of the A division was mysteriously looking in a pan and one of the girls asked, "What are you looking for?" The orderly replied, "I coughed my toos (tooth) out and I'm looking for it."

ACADEMIC NOTES

The eighth grade is studying cylinders, pyramids and cones.

The examinations are all over and now the sophies are wondering about their grades.

The juniors have been studying nitrogeous and non-nitrogenous compounds in chemistry.

The juniors are much interested in studying about the athletic sports and education of the ancient Greeks.

On Wednesday forenoon the juniors held a contest in algebra to show who was the speediest and most accurate.

The engineers have been very busy repairing boilers and pumps. They are going to put new tubes in boiler No. 6.

For a junior to get on the honor roll is a difficult task. This month Elizabeth Churchill and Wallace Morgan were successful.

Rebecca Carpenter, Erma LaClair, Cruz McDaniels and Roy Courville of the eighth grade B are on the honor roll for this month.

The track men have been out daily getting in condition for the non-conference track and field meet which will take place in Portland early this spring.

Among the juniors Wallace Morgan is considered the "wise guy" in algebra, while Edna Hill, better known as "Bunker," is second among the "sharks."

Albert Spearson, Joseph Racine and the Evans brothers of the Junior class are expecting to take part in the annual five-mile race staged by the Portland News at Portland this Spring.

The newly-elected officers of the eighth grade are, President, Charles Buchert; vice-president, Jessie Cleveland; secretary, Henrietta Chamberlin; sergeant-at-arms, Carrie Anderson; treasurer, Cruz McDaniels.

The juniors held their regular class meeting last Friday. Following a business meeting an enjoyable program was given consisting of the class song, a recitation by Stanley Orton, an instrumental duet by Charles and Wilfred Evans, an impromptu talk by Frank Sookum, a song by Albert Spearson. James Choate, George Thomas and Elmer Therriault, and a recitation by Frances Fitzpatrick.
