Farewell Social—Students and Employees	-	7:30 P. M.

ITEMS FROM THE TRADES

Notice to students: Now is the time to give the best effort you have, as everyone is busy. Get the habit.

Charles Ell is building a linen closet at the Superintendent's residence, which will be completed this week.

The tailors are well along with their spring work and are at present busy with costumes for the commencement entertainment.

The carpenters are finishing the cases for the domestic art department, as well as the stage properties for the auditorium. They have a great deal of other work in progress also.

The baby chicks continue to grow. In fact, they grow so rapidly it will soon be necessary to build more houses for them. Mr. Henry Turner is a busy man these days feeding and caring for them.

A great deal of well-deserved praise is heard of the stencils designed and made by Martin Colby in the mechanical drawing room. The painters recently finished stenciling the designs on the panel screens made by the carpenters some time ago.

Mrs. Shafer, hospital cook, is taking a week off which she will spend at Lebanon, Oregon. Her sister, Mrs. R. S. Howard, of Salem, took her place during her absence.

The engineers are cleaning up and doing some repairing about the plant. Our new chief engineer, Mr. Beck, from Spokane, Washington, arrived several days ago and has taken charge of the work.

The leather workers are busy as usual with shoes and harness. The wet weather of the past spring has been very hard on shoes and they experience considerable difficulty in keeping pace with the demand for repairs.

The plumbers have just finished placing the drinking fountain at the library. They also put in a gasoline tank at the Superintendent's residence this week. John Hanson and John Malataire have recently joined this detail.

Mr. Beebe and detail have been whitewashing the fences about the place. If anyone is needing to be whitewashed we suggest they apply to him, as he claims he will do a thorough job. This detail has also done some good and much-needed work on the drives about the grounds.

The painters are painting the bandstand and will begin on the Superintendent's residence soon. Our outside work has been considerably delayed this spring on account of bad weather. The inside work they have done is all to the good and they have several pieces of furniture to finish before demonstration week.

Mr. Charles Beck is now chief engineer at Chemawa. He arrived Monday, May 16. He is much pleased with our school in every particular. He has a daughter, Miss Ula, who is attending the University of Washington in Seattle. A son is trap drummer in the Salem Symphony Orchestra. We are all glad to have Mr. Beck with us.

The machinists are about ready to put their demonstration work in shape for exhibit. This department does innumerable jobs about the plant that would be expensive if done in town and is a thoroughly paying proposition, both instructively and financially. The hand tools manufactured by the boys of this detail and the other work done in this department is a source of surprise to not a few.

The blacksmiths have been making some parts for the swings that were recently rebuilt at Winona Hall. By the prompt and efficient work of this department the farm machinery was all repaired and ready to use as soon as weather conditions permitted the beginning of farm operations. The boys of this detail have also done considerable work in auto repairing this spring and are eager for more to do, which shows the right spirit.
