

**INDUSTRIAL ITEMS**

The dairy force are rebuilding fence on the lake land.

The painters are at work on Winona Hall at present.

The carpenters are progressing nicely with the interior of the shops' addition. Also the electricians are coming on with the wiring.

The new walk in front of the west cottages recently completed by the masons is a great improvement. The employes living there wish to express their appreciation for the improvement.

Mr. Ross and detail are preparing the flower beds on the lawns and about the buildings for the spring planting. An additional piece of ground has been laid out near the green house where the plants recently purchased are to be set out.

Much land has been added to the farm again this spring by the farmers, though available weather for blasting stumps has been scarce. The newly-cleared land has been broken and a crop will be raised on it this season.

Baseball practice is at 4:00 P. M. We find the successful candidates can work until 3:45 and be ready for practice at 4:00, while some others have to quit quite some time earlier in order to get there at practice time. The latter do not make good base runners. What is the reason?

The tractor is busy in the west field and has turned over quite a piece of land. It is fortunate that the farm is equipped with this machine for it can cover so much more ground in a day than teams could plow and that is an added advantage where every minute counts, as it does in this climate.

**SENIOR NOTES**

Most of the Seniors attended the Nonpareil Annual party. They say they certainly enjoyed themselves.

John Kalarak deserves notice for his promptness in answering "current events" questions in the assembly last week.

Reginald DePoe returned last week and delighted a lot of his friends with his hearty old smile. We are all glad he came back.

The botany class are studying about the classification of flowers. We have already analyzed several varieties and find the work most interesting.

Raymond Haldane had the honor of reading at the general assembly an article written and sent by Luther Burbank about the use of tobacco and its results.

Last week the seniors were writing "Legends" for their English work. It continued for three or four days like a serial in a magazine. Some of the boys had very interesting stories.

There is much to wire up in the new shop building. Our two senior electricians, Reginald DePoe and Louis Dupuis, are now wiring the mason department, which formerly was the old power plant.

We are very fortunate in having "Abey" Stepetin, as our "question box" today at the general assembly. Remember his old-time motto, "Always do your friends good," by answering his questions.

The machinists of the senior class are repairing and making all kinds of useful implements in the shop, which goes to show that when they start to work in a strange shop they will be able to make and do something without much directing from the boss.

Hoo rah! for our side. One of our senior masons is making concrete blocks for building purposes. Willard J. Williams will be the first boy to graduate from this department in the history of Chemawa. We did not know his occupation until recently. We find him to be the only senior mason to finish the course.

**DOMESTIC SCIENCE NOTES**

The time is drawing near for the Sophomores to leave for the sewing room. Just to show that we are improving, there were no failures in cooking this week.

We made some good bread last Tuesday. It was enough to make high school lunches for two days. We hope to make other kinds this week.

Martha Orsen, one of the "Wigwam" girls, is substituting at the hospital this week.

Emma Escholt is back after an absence due to illness.

In line with our study of home gardening we planted a parsley bed last week. We hope those who come next will care for it and keep it growing.

Yours till next week,

THE SOPHOMORES.

**DOMESTIC ART NOTES**

Good morning, folks!

We'll be leaving you in a week, but not for good. We're only promoted to the Domestic Science to do our bit there

If you want your folks to see some good-looking dresses you had better write them about it. They make their first appearance in public when the school operetta is given, so just add a line or two about us in your letters. We'd be very grateful.

The carpenters have just given our department an added touch of decoration and we're obliged to them.

Our first lesson in dynamic symmetry will be given on Thursday morning and we're all patiently waiting for it, as we know that it will be an interesting lesson.

We assure you that we're learning quite a bit from our experienced instructor. We'll tell you about it next week, so don't fail to look us up.

The studious and industrious

JUNIORS.
