

POWER AND PROMPTITUDE

(Continued from page 1)

your life what you have not put into it any more than you can draw out of a bank what you have not deposited. The character of a boy or girl indicates pretty correctly what kind of a man or woman they will be.

In conclusion, let us urge each of you to go to work at Chemawa with a stout heart, with courage and enthusiasm, work and keep it up—stick, because it is your duty to do so. And remember that many of our grandest men and women started out poor and had no other capital than pure grit and invincible purpose, and that those who hold out, endure to the end, will reap a good harvest and be what the world calls successful.

If you finish at Chemawa with the full school course you will have something of which to be proud. You will then have an education that will fit you for success.

INDUSTRIAL ITEMS

The machinists are mounting the marine motor that they brought out from Salem last fall.

The masons have plastered the new concrete steps in front of the new shops and have built a concrete ramp at the rear of the building also.

The engineers have made a decided improvement in the grounds about the power plant recently. They are to be congratulated on their efforts.

Our poultry yard looks prosperous these days. A fine lot of young fowls are coming on and the prospect for a large egg production this next fall is excellent.

The new bleachers built recently will add a great deal to the seating capacity of our athletic field. One unit has been completed and another will be made as soon as possible.

The first unit of the scenery for the operetta to be given at the close of school is about ready to erect. We will have to commend the carpenters and painters for this work.

The tailoring department is turning out some colonial costumes that are certainly a credit to the department. We wish we might all dress in so fine a costume, but fear the wear and tear would be too much for them.

Our farm and garden details go manfully to work to get us a good crop again this year. It is a noticeable fact that their part toward a crop is always well done. This should encourage the Lord of the elements to meet them half way.

About the largest demonstration the industrial de-

partments have had will be the new shops' addition. The departments represented are carpentry, masonry, painting, plumbing, engineering and blacksmithing. So far we have found no way to get the bakers represented, but hope to do so in the near future.

In every walk of life some energy, time and money must be expended to produce anything. One of the lessons that must be learned is that "the greatest success in any line is only attainable through the greatest labor." Knowing that the above is true there remains only one course to realize greatly from our trades, and that is to put greater effort and thought into our work.

We sometimes hear people say they are not getting anything out of their trade. The individuals who are most inclined to voice such a sentiment are those who have failed to put something into their several trades upon which to draw. It is a well-known fact that the farmer must put seed into the ground—at no small labor to himself and his equipment—if he is to reap any crop. The mechanic must put materials and labor into his job to produce a finished article.

DOMESTIC SCIENCE NOTES

Maytime brings smiles to us and success in our cooking and baking.

The Freshies have had varied experiences as waitresses at the parties and dinners. We have enjoyed this work and feel that it has given us valuable training.

Our meal-planning work still goes on. We can manage much better now and hope some day to be "experts" in this line.

One of our freshmen put this question to a friend: "Is a quail a little beast?" Which shows she belongs in this class.

We are looking forward to demonstration week, when we will be able to show to all of you what we can do.

Yours till next week,

THE "FROSH."

DOMESTIC ART NOTES

Good day, folks!

Look what the wind blew in—just the "happy twenty-niners."

We have just about completed some of the fancy colonial costumes that are to be worn in the operetta and are starting on some other things for the same use.

We were lucky last week while cleaning up for some visitors, we found some very nice useful articles with attractive hand work. Miss Vesper was very nice in letting us have a bargain.

We are giving a little help also on some of the dresses for the fashion show.

Good-bye,

TWENTY-NINERS.
