OUR EDUCATION

By ANNE PHILLIPS, Chemawa Student

Education is the most important essential in our lives. It equips us to live happily and successfully. Many of the people who are illiterates are very unhappy because they do not secure the joys and beauties of life around them. They are in a class by themselves and are usually "set off" from the educated class because they are not congenial. They are not able to find profitable work without a great deal of labor attached to it. The demand for employment asks for educated and intelligent workers and not ignorant and untrained ones. The demand always seeks for the best fitted. In order to be happy and successful we must have an education.

We all want to be on an equal basis with the educated people, do we not? If we seek equality in that respect, we must meet the demand; namely, the needed learning, and then start as they did. We do not want our country inhabited with illiterates. We want the best kind, the helpful kind, the useful kind; those who have had training in certain vocations and who will meet the requirements. An educated person is better equipped to meet many of the opportunities which will come to him. He will be able to face bravely and thoughtfully the difficulties in store for him. One's goal should be to reach high standards.

When we have acquired our education we must use it in the right way. We should profit by it ourselves. We should see that society profits by it. Some selfish educated people do not take interest in other people or civic society. As long as they satisfy their own needs they do not care for the others. We must not be like that; we should use our education in helping to solve the problems of mankind. Let other people who have had little or no education profit by our example.

Education is the foundation of everything; therefore, we all should endeavor to acquire it in every respect when we have it offered to us so freely.

IS THIS NEWS FOR YOU?

By Our Freshmen Students

The term "moving pictures" goes back to the first decade of the eighteenth century, when a panorama of moving figures was invented by a German, Jacobus Morian, and exhibited in England. Old handbills tell

of the wonders of this instrument, but it has not been determined whether or not the moving figures were working models or Marionettes. However, it is believed they were similar to figures seen on old clock faces—painted images moving on flat surfaces.

The cadets of West Point are appointed in number and from sources as follows: Four from each state at large, two from each congressional district, two from each territory, four from the District of Columbia, two from natives of Porto Rico, 122 from the United States at large, and 180 from among the enlisted men of the regular army and the National Guard.

Soup dates back to the earliest wars, when starving peasants eked out a sad and miserable existence. Famine, siege and plagues schooled them to use the poorest part of the animal, to use weeds, flowers, and vegetables which developed flavors and ingredients characteristic of the different countries. The "birds nest" soup, containing a species of swallow, is well known in Japan, but the soup considered typical of that country is "beche-de-mer," made from dried fish.

INTERESTING NOTES

The following interesting paragraphs were contributed by pupils of the freshmen class and prove the value of a good school library, the privilege of visiting it, and the will to "dig" a little:

The United States declared war on Germany on April 6, 1917.

The name of the upper river Thames to Oxford is called the Isis. Isis was the chief goddess in Egyptian Mythology.

The ancient city that is situated on the Tiber is Rome.

The title of "Barbarossa" was given to Frederick I of Germany because of his red beard.

The most important river in Germany is the Rhine.

There are three broad classes into which pottery is divided, earthenware, stoneware and porcelain.

Sarah Bernhardt made a moving picture called "Queen Elizabeth."

The United States military academy was established by the government in 1802 at West Point.

British lieutenant, Blackbeard, plied his trade in
