The Asylum.

The contention about the insane asylum among Eastern Oregon papers would remind one of the quarrel between the boys in an old tale about the stars and the firmament, one boy supposing the stars represented cattle and were his, and the other claiming the sky as a pasture ground. The question arising where the kine would graze led to a quarrel resulting in a bitter fight. The insane asylum row is just as profitless. Gov. Pennoyer, Secretary McBride and Treasurer Metscham will decide the point and will compare impartially all the claims of each. Old Preventives.

All the old preventives are being used in the present raid of influenza, and some new ones. Faith in the camphor bag still prevails, and English people, who, it must be admitted, are peculiarly afflicted with the distemper find practical solace in the Roman fover safeguard. A three or four grain quinine capsule is taken at 5:30 in the morning. followed at once with a small cup of black coffee. A newer agent, said to prevent efficiently, is to hang damp cloths, upon which thirty drops of volatile oil of eucalyptus are sprinkled, in rooms and corridors; a little should be mixed with spirits of wine and used as a spray. Eucalyptus in minute doses, one drop on a lump of sugar, is sometimes employed to ward off scarlet fever where one has been exposed. It is not, however, regarded as an absolute prophy-lactic. It should be used only under the directions of a physician.—Her Point of View in New York Times.

A Diamond Worth \$40,000 A magnificent diamond, a perfect octahedron, weighing 205 carats, has been purchased from a river digger by a Kimberley buyer. It is the second largest stone ever found in the Vaal diggings, the largest being the celebrated Spalding diamond of 280 carats, but which was vellow and of bad shape. The price paid for the stone recently found is said to have been £2,000. Since his return from the river the buyer has been offered £8,000 for it, which offer has been refused.-South African Mining Journal.

The report comes from Mason, Mich. that the meanest man on earth lives there. He is said to have wrapped large fat icicles in fancy colored paper and given them to the children as a new kind of candy.

Duration of Life Among Birds The distinguished German biologist, Weisman, has pointed out that there is less exact knowledge on the subject of duration of life among birds than might be expected, considering how many in number are the ornithologists and the ornithological societies. Small singing birds live from eight to eighteen years. Ravens have lived for almost 100 years in captivity, and parrots longer than that. Fowls live ten to twenty years (and are then sold as spring chickens to young housekeepers).

The wild goose lives upward of 100 years, and swans are said to have at tained the age of 300. The long life of pirds has been interpreted as compensation for their feeble fertility, and for the great mortality of their young.

Obviously, as Weisman observes, such birds must reach a great age, or they would long ago have been exterminated.
