GIANTS AMONG THE PLANETS. Mighty Jupiter, Whose Diameter Is Elev-en Times That of the Earth.

pin of this solar system is Jupiter, Pellets about eleven times that of our own are better. They're globe; the circumference 275,000 miles at the equator, which would give the says the St. Louis Republic, to bring now separates the earth from the moon-about 240,000 miles - what a Attacks, Sick and Bilious Head- the residents of our little globe. The way to a point inconsistent with any world of Jupiter would appear to us to monarchy at all. have a diameter forty times larger than that of our usual mighty attendaut, and the surface of his disk would occupy a space greater than that of 1,600 pills. And they're more effective. full moons. And this giant of planets One little Pellet for a corrective or is removed from the sun by a distance of 496,660,000 miles; has an orbit of They're guaranteed to give satis- more than 1,000,000,000 miles in extent. faction, or your money is returned. and makes a circuit of its celestial track once every 4,332 days. Thus it will be seen that a year on Jupiter is The MAKERS of Dr. Sage's equal to eleven years ten months and mensity of the world of Jupiter and its

SOME JAPANESE CUSTOMS.

Usual Accompaniments of the Native When Out of Doors.

In Japan almost everyone, says the Waverly Magazine, carries a lantern. By day and night it is dangling at his belt. It resembles a thin, flat box. Each end of the box is fastened to a sort of paper, which, lying in folds, forms, when drawn out, a lantern. The Japanese usually earries also a tiny wooden box, shaped like a cylinder, to hold his candle. A small medicinechest, with half a dozen little boxes, each containing a small portion of medicine, a fan, a pipe and a short sword, all form part of the outfit. The belt of a Japanese is, therefore, a very important part of his dress.

His slippers consist of a sale with a worsted thread at the apper end, through which the great toe is thrust to keep the slipper on. His pillow is a framework of whalebone, or some such substance, into which the back of the neck near the head fits. This is to keep his knot of hair in order, for he does not have his hair dressed every day: and, therefore, is obliged to take care of the piece, which is greased and bound into a one, the rest of the head being closely shaven.

The rich Japanese send their children to school in inferior garments, in order that the children of the poor may not be ashamed to wear their shabby

EXPERIMENTS made in the tobacco cultivation throughout Europe have not given much promise of success.

ATTEMPTS have been made to produce spider silk, but have falled, the ferocious nature of these insects not permitting them to live together in communities.

EMMA GOLDMAN tells a New York interviewer that she loves nothing better than a bath. If Emma doesn't look ont the anarchists will be reading her out of the party.

THE mountain of Fujisian, in Japan, is actually in motion. It is 19,400 feet above sea level, yet the power of the winds in those quarters causes it to away from side to side.

Effects of Cave Air.

The remarkable physiological effects of cave air are well known. A traveler who visited the Mammoth cave in Kentucky says that on emerging the sense of smell was intensified to such an extraordinary degree that most common objects such as trees, plants, animals and even people had strong individual odors, mostly unpleasant. One tree could be easily distinguished from another by its characteristic odor. The effect lasted about half an hour and then passed off. The guides say that this is a usual experience. writers have noticed a similar effect from the sudden change from the pe culiar oxygenated air of the cave to that of the outside world. The sense of smell is greatly intensified in almost every case. This intensification of olfactory perceptions is explained by the rarity of olfactory stimuli in the cave. On emergence, in accordance with a physiological law, the perceptive pow ers for these particular stimuli, having rested, are intensified, so that odors too delicate to make an impression under ordinary circumstances are powerfully felt.

Described the Charges.

Speaking of railway rates, some one tells this story: In an advertisement by a railway company of some uncalled-for goods, the letter I was dropped from the word "lawful." The notice read: "People to whom these packages are directed, are requested to come forward and pay the awful
