Average precip. for 34 wet seasons (Sep. to May inclusive) 22.36.

WILLIAM BELL, Observer.

EASTER.

Tomorrow is Easter Sunday. Throughout the Christian world there will be devotion to the Christ who gave up his life on the cross that all that believed in him might be saved.

The day is set apart arbitrarily by common consent. It is observed in every country and every clime where there is a Christian man or woman. It fittingly marks the tribute that although centuries have passed since His resurrection from the grave, the world still pays its devotion to Him and His cause.

Next Monday the men will be paying Easter hat bills.

WE HATE TO PUBLISH THIS?

The Umpqua Valley News is doing some mighty good work in uncovering the filthy conditions at the county seat. A new dive "more notorious than the celebrated Main street abode" is the latest festering spot uncovered.

LOCAL NEWS.

Come and see what we can do for you. We fit the hard to fit. Hislop The Shoe Man With Howard's Shoe Hospital

Thermatic Way The Best A Fireless Cooker That's Made Good There have been fireless cookers—lots of them. Some of them would do near-cooking, but they didn't roast, didn't bake, didn't cook thoroughly. Thermatic will. The inside of the Thermatic is all metal, bright, polished. The cabinet is steel. Nothing to absorb steam, grease, or odors, and is fire-proof. That is one point. Here is another: The covers are hinged and individual for each compartment. The special stop hinge will not break or pull off, and our SIMPLEX fastener is the acme of thorough construction, and most easily snapped into place, drawing down tightly the covers. Its resiliency permits steam to escape into the open air when necessary. The arrangement is so good, others are now attempting to imitate and use the same device. Then, again, most fireless cookers cannot raise the temperature above the boiling point—212 degrees Fahrenheit. This is well enough for some stews and vegetables and cereals, but it cannot possibly roast or bake. The Thermatic does all this, and more. When the roast or pudding is placed in the Thermatic a hot radiator is placed below it and a second one is placed above. This arranged for by our patent folding steel baking rack, supporting the upper radiator. This raises the temperature to about 350 degrees Fahrenheit and insures thorough and perfect cooking; richly browned roasts. This is why we can bake beans, cakes, and puddings, which is absolutely out of the question with the ordinary fireless cooker, and only imperfectly performed by those cookers which have makeshift baking attachments. And yet nothing can possibly burn. The Thermatic cooking vessels are of aluminum, fitted with a tight aluminum cover. Food—no matter what kind—comes out of the Thermatic more appetizing in appearance and more delicious in flavor than if you fretted and worried over a hot stove for hours. The steel cabinet, the Dilmaco metal lining, the perfect insulation, and the tightly clamped cover—these and the radiators for roasting and baking—are the secrets of the Thermatic's perfection, and IT DOES THE WORK. The economy of fuel means much to you, too. You can easily CUT YOUR COAL OR GAS BILLS IN HALF by using the Thermatic. And the Thermatic will relieve you of an immense amount of work. Don't work in a hot kitchen over a hot stove! Don't spend all your time cooking! Buy a Thermatic. Let it do the work for you. Remember, it will pay for itself many times over every year in the saving of fuel, time, trouble, and worry. Order one today. No. 1—One 8 quart vessel. One compartment. \$10.00. No. 2—One 8 quart and one 4 quart vessel. Two compartments. \$15.00. No. 3—Three 8 quart vessels. Three compartments. \$22.50. Equipment with each Thermatic includes Tongs, Baking Rack, Radiators, and clothbound Cook Book with complete instructions. Churchill Hardware Co.
