Correspondent Believes All Women Should Be Voters.

Editor News: Will you kindly print a few lines favoring woman suffrage? If women are "people" they have the right to vote, according to the constitution of the United States.

All male citizens except idiotic, insane or criminal have a right to vote. In some states women are placed below these in the political world.

In New Jersey, under the federal constitution, women voted for Washington, Adams and Jefferson, and were not designated "the new woman."

The only part of the constitution which could be called into account on this subject is the second clause of the fourteenth amendment, but the nation does not consider a woman's vote unconstitutional, else it would not honor those of suffrage states.

The first clause of the fourteenth amendment says: "All persons, born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States, and of the state wherein they reside."

This clause does not say "all men", but "all persons" and unless women are not persons they are citizens.

The second clause says: "No state shall make or enforce any law which shall abridge the privileges or immunities of the citizens of the United States."

Then follows the fifteenth amendment on the rights of citizens, not men: "The right of citizens to vote shall not be denied or abridged by the United States, or any state, on account of race, color, or previous condition of servitude."

Christ said that the cry of the woman would gain the hearing of the judge. Then the nation will recognize women as belonging to the human race, and women will vote as citizens.

Instead of having a government of the men, by the men, and for the men, we will have a government "of the people, by the people, and for the people." That is what we need in this land of liberty.

NOTICE.

Parties using Grand Union Tea Co. goods will be pleased to learn that headquarters are now located at the old stand, corner Lane and Pine streets. For prompt delivery telephone J. D. Palm, agent. m7

SQUIRREL POISON.

Every kernel of Bolduan's Poison Grain contains a deadly dose of powerful, quick-acting poison, "set" in the grain by a patented process. Rain, snow, dew or damp ground does not wash out this poison. It is the only poison which is as good six months after as the first day it is put out in the fields. The best poison you've ever used, or your money back. **MARSTERS DRUG CO.**

ALMOST LOST THEIR POSITIONS.

Young Looking, Up-to-date Men Are Wanted.

Gray-haired men look too old. They are pushed aside—often discharged. Hundreds write us every year that by using HAY'S HAIR HEALTH they have restored their hair to its natural color—kept themselves young looking, and kept their positions for this reason.

Don't be one of the old looking ones—begin using HAY'S HAIR HEALTH today—it will keep you among the young ones.

Marsters Drug Co., and Hamilton Drug Co. sell it for 50c and \$1.00, or from Philo Hay Spec. Co., Newark, N. J.

Hermann Marsters, the plumber, is prepared to install gas fittings as well as pipe houses. He guarantees his work to be first-class in every respect.

DAILY WEATHER REPORT.

THE FLY CROP.

While it is impossible to forecast the weather or tell just how large the different crops will be, there need be no guesswork on the question of flies. It is safe to take it for granted that there will be the usual number of the dirty pests. It is true there are not as many of them about right now as there will be in eight weeks, but it is none too early to begin waging a vigorous campaign against them. The fight against them should be waged along two general lines—first, reducing their breeding places to a minimum, and, next, to destroy them with traps and poison as soon as they put in an appearance. The several prepared fly dopes are excellent, but care should be taken to see that they are kept out of the reach of little children. Another dope that is not harmful to the human is made by adding a couple of tablespoonsful of formalin to a pint of water and placing this in shallow dishes where the flies gather. A little sugar and a few drops of vinegar will serve to increase its drawing power. The most effective trap is made by inserting a cone made of wire screen with a small hole in the tip in the bottom of a barrel or smaller receptacle with wire sides, made fly tight. This should be put where the flies gather, raised three or four inches on supports and a dish of some sweet stuff placed beneath to more effectively draw the flies. They will creep up this cone into the trap, and the more flies there are trapped the more will want to get into it.

PRESERVING EGGS.

Now that the season of cheaper eggs is at hand there may be some readers who will want to preserve some for fall and winter use. One of the best methods of a good many that have been tried is by the use of the water glass solution, or sodium silicate. This chemical costs about 30 cents a quart and can be got at most any drug store. This should be thoroughly mixed with water that has been boiled and cooled at the rate of a quart of the water glass to nine quarts of water. The best receptacle to use is an earthenware vessel, which should be scalded out before being used. Only clean, fresh and uncracked eggs should be put down. The jar containing the eggs should be put in a cool place and covered with sucking or a board cover to prevent evaporation of the solution. Experience shows that eggs laid in April and May will keep longer than those secured in other months.

WHY IT PAYS.

Briefly, the philosophy of the advantage of clover growing lies in this fact—that, while a ton of clover hay takes from the soil about \$8 in fertilizing elements, there is added to the soil through the root systems, which take nitrogen from the air, about the same volume of fertilizers. This means that one can grow clover and just about keep even. However, if one feeds this clover hay on the farm and returns the manure to the soil the farm will be the gainer by approximately \$4 worth of fertilizers for every ton of hay produced. It is due to this fact that sections where dairying is carried on and where cattle and sheep are fed become more fertile and prosperous as the years go by.

WHY THEY STAY.

Folks living in security on the highland watersheds, far removed from the Missouri and Mississippi river bottoms, wonder sometimes why folks persist in living where the water level in these rivers is higher than the beds they sleep in at night and where in time of spring freshets they are likely to be drowned out of house and home. The secret of this persistence may be accounted for in part by the fact that many of these people are of limited resources and have not the wherewithal to buy land elsewhere, but in larger part because these lowlands, overflowed as they are with the silt laden waters at floodtime, are as fertile and productive as was ever the valley of the Nile.

A LIVE STOCK SPECIAL.

The good work which is being done along the line of animal husbandry in the Wisconsin State Agricultural college at Madison is being spread abroad in the southern and western parts of the state this spring by means of the running of live stock specialists, officials of the several railroads co-operating in admirable fashion with representatives from the college. Not only are lectures on the advantage of raising improved breeds of stock given, but representatives of the several kinds of domestic animals are taken along as object lessons to drive home the arguments presented in the talks. It is a good work that is being done and means benefit for all parties concerned.

CUTWORM AGAIN.

While gardeners in many sections of the country have been hoping that there would be a letup in the cutworm pest this spring, indications point to the contrary. Gardeners who have made early hotbeds find the worms already at work and doing much damage. If one is compelled to wage a campaign against the worms there is no better way than moistening bean or clover or alfalfa hay in a solution of paris green and scattering the bait along rows of newly set plants. As the worms do most of their work at night, the bait should be scattered in the evening. They will feed on it during the night and kick the bucket the next morning.
