GOOD ROADS STORY

Tells of What Can Be Earned Good Roads.

Here are some astounding figures prices on products, of the annual cost of bad roads to a group of some 4,000 farmers living in the vicinity of Minneapolis. story they tell is probably the story of many other sections of the coun-

Loss because of longer route Loss because of slow progress 75,627,64 Loss because of extra trips 296,288.09 Loss because of specific reasons 221:374 16 Loss because of inability to haul manure 91,926.80

Total loss\$747,149.80 The merchants and manufacturers of Minneapolis lost even more heav-ily. Accurate statistics show that for the year 1911 their loss was \$910,000, because of the wretched conditions of the important arteries of traffle radiating from the city. Combining the loss of farmer and merchant we have a grand total of about \$1,657,000 a year, sufficient to pay five per cent interest on \$30,-For \$21,000,000 three thousand miles of splendid road could be built which would not only bring immediate cash benefits to the farmer but would vastly increase the value of his land.

If the cost of bad roads to the farmers of the nation were to be compiled the totals would be stag-gering. The cost of the Spanish-American war would be trifling by comparisan.

To return to the group of suburban Minnesota farmers, it is reckoned that the bad road tax was \$1.70 per acre, \$14.20 on each \$1,000, and one and a half per cent of the total farm value of the district. Statistles for 1912 have not been compiled, but they will probably agree with the 1911 figures, which show that the loss to each individual farmer because of bad roads is nearly \$200 a year. Those 4,000 farmers paid twenty-five times as much for bad bad roads as they did for fertilizers.

Hard on Potato Growers

All these extremely interesting data were obtained by the committee on highways of the Civic and Commerce Association of Minneapo-lis. Fifty rural letter carriers were employed to comb the Minneapolis trade district for information. The district covered is included within a radius of twenty-five niles from Minneapolis. The canvass occupied three months and 4069 farmers replied in some fashion to the twenty questions concerning their loss from had rouds which had been framed by the investigating committee.

The majority of the farmers explained that most of their trips were made over bad roads because the fall was the time when they could best afford to leave their farms and also that the fall was the time when it was possible to make a little more profit by hauling manure on the return trip.

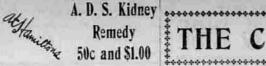

The big Anoka potato country is tributary to Minneapolis and St. Paul, and it costs the farmer who bauls his crops to the cities about ten or fifteen cents more a bushel than if he hauls to a siding in Anoka county. If he could haul three tons at a trip be could make \$15 cash on his produce and an additional profit by hauling back manure to the farm.

The most important of the twenty questions put to the farmers was "What direct loss do you remember that you suffered in 1911 because of had roads, whether owing to ina-billty to market when you could get the most money, or because of spoiling produce, or injury to horses or wagons, or any other reasons?

Some of the Specific Losses Although many of the answers were extravagant and hysterical the committee was able by a process of elimination to reach specific conclusions and tabulate a scale of working averages. All statements of loss that gave no reason were thrown out and so were all such sweeping statements as "\$100 for loss of time, spoiling of melons, and so forth. Some of the replies were extremely interesting. "Our outfit will last one-third as long on had roads as it will on good roads," came from a firm that marketed \$50,000 worth butter. Here are some of the fuminating replies estimating indi-

Twenty loads of fertilizer,

vidual loss:

Got stuck, broke a wagon, took a whole day instead of half a day.

If roads are bad we must leave They are carefully compiled and the home shortly after midnight in order to make the market at six o'clock.

> I have potatoes in the cellar on account of bad roads.

These replies from a single town \$ 61,994.01 run the whole gamut of loss:

I could have been through two says: weeks sooner and had twenty loads more manure.

Broke wagon and wagon racks, repairs \$15. If I had carried my 20 londs of

potatoes to Minneapolis instead of the station I could have got from 10 to 15 cents more per bushel. Tired horses, empty stomachs,

broken whips,

It softens tomatoes and melons so that one has to take what one can get for them. Lamed a horse and broke shafts.

Lost 50 cents a ton on S tons of cabbage. Broke harness several

One farmer who was asked what was the total wholesale value of his farm produce for 1911, responded: "I wouldn't even tell the assessor the truth about that, but I will say that if the roads were good I would raise more truck and garden stuff and buy an automobile to deliver it.

Altogether 2800 of 4069 farmers questioned sent in responses. Of the majority who replied 1102 answered every question in exactly the way the committee desired, and only these answers were used in the final calculations. The 1102 replies were representative to a highly satisfactory degree of the 4069 farmers of the district representing almost exact proportions of population, acreage and geographical distribution.

The committee learned that the 4069 farmers of the district hauled life and tire insurance companies and to market in 1911, 500,000 tons of farm produce and sold it for \$6,they spent was equal to 800 years of eight-hour work days. The distance they travelled was equal to 188 times the circumference of the earth.

Benefits Pay Higher Taxes

Their produce was all grown in the district tributary to Minneapolis, and should have been brought to Minneapolis, Instead because of bad roads, the farmers took 21 per cent of it elsewhere. The neglect of the roads shut the rates against the produce of \$50 fabmers and turned away the sales of more than 4000 ocrnous. Of course the trade lost was much smaller, for farmers trade where it is most convenient and seil where it is mest profitable; but the lack of market reduced materially roots in unwholesome dwellings the prosperity of those who did trade in Minneapolis; and even when they ST. LOUIS OUSTS BILLBOARDS.

did come they lost maney.

The loss of time is due part; to The loss of time is due part; to Nine Year Legal Battle Brings Banish-slower pregress, partly to taking a most For Dig Signs.

The final rest of the billboard trust took place in St. Leuis ofter a nine man and team is 48 cents an hour, and at this rate the loss of time due to not taking a shorter route was in 1911 about \$85,000. The loss of time due to slower progress was ore, and to each of these owners a man and team is 48 cents an hour.

betterments it would replace the of notification, one day's grace being farm implements owned in the district every three years, the cattle every 3 years, the horses every 4 the effending boards will come down years and all other domestic animals and Building Commissioner McKeivey, combined every six months, it

Turning for a moment from the farmers' to the merchants' loss it is town. I muit the easy to estimate that, as stated at the beginning of this article. The loss of the merchants and manufacturers of the merchants and manufacturers. No billboard may approach pearsus of the merchants and manufacturers of the merchants and manufacturers of Minneanotis because of bad roads was in 1911 a little more than \$910.
000. This is figured from a total delivery cost of \$6,000,000. Add the line of the lot. this loss to the farmers' loss, and the grand total of ascertainable losses due to bad roads in 1911 was \$1,657,000

Working from this figure it is simple as a rule of thumb to esti-mate that the spending of \$20,00,000 for the building of 3000 miles of good roads in the Minneapolis district would be anything but a burden for the farmer to carry. The in-creased taxation would be lost sight of in the benefits to accrue, and the good roads themselves would pay handsome dividends.

COMMUNITY CONCERN IN BETTER HOUSING.

Plans Should Embrace Tenements and Single Family Dwellings.

Housing reform applies not only to tenements, but to the single family dwelling also, according to John Hilder, field secretary of the National Housing association. Writing in the Survey, he

"We have learned that bad housing may be found not only in the single family shacks, but even in what is styled a single family residence. Just ns it was found impossible to draw a valid distinction between an 'apart-ment house' and a 'tenement house,' so is it impossible to draw one be-tween shack and residence.
"The new conception of what a city

dwelling should be required to provide for its inhabitants runs counter to some established customs

CLOTHESTALK

by Mrs. Hurst.

EVERY Season has its social demands and clothes needs—but particularly do the outdoor months command attention to the question of dress—because then our activities come within the range of vision of a much greater number. Right now is a good time to look to your clothes requirements for the coming season, because the opportunities for selection

are at their height. In fact we have anticipated your interest in the clothes subject wth a display more elaborate than usual. The light weight, distinctively Summer suit with its grace and comfort will be more popular than ever this season and we have a number of unusual fabrics to show you. Nor have we neglected the shirt neckwear, hat, shoe, hosiery or umbrella question. Hence we can extend you a cordial invitation to call on us with assurance

that you will find your visit most interesting. "DUDS FOR MEN"
