

Children Cry for Fletcher's CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other narcotic substance. Its age is its guarantee. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic and Diarrhoea; allaying Feverishness arising therefrom, and by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep. S. C. BARTRUM ON THE SALMON QUESTION.

Editor News:

I notice considerable sentiment has been started recently in reference to holding the royal chinook salmon at Winchester pending the completion of the racks at the hatchery. From the comments that I have heard and the articles I have read in the papers, there appears to be an entirely wrong impression as to the actual conditions existing and reasons for holding these fish. The facts are: on account of the extreme high water in the North Umpqua river this season, it has been impossible up to the present time to install the racks at the hatchery above Glide for the purpose of holding the chinook salmon for propagation purposes. A very large run passed through the ladder at Winchester before it was closed and fearing that the balance of the salmon would pass the hatchery before the racks could be installed, Master Fish Warden R. E. Clanton together with several others made a trip to the hatchery and also to Winchester, and it was the judgment of these men, myself included, that it would be wise to hold the salmon at Winchester temporarily until the racks could be installed at the hatchery.

This method was the only means by which the usual nine of ten million salmon eggs could be secured for propagation purposes. The racks are now being installed as rapidly as possible and within a few days the fish can be allowed to ascend the river.

The statement that hundreds of fish are killing themselves at Winchester is erroneous. I have had occasion to visit Winchester a good many times since the fish have been held there and I have not seen a single salmon injured or killed except from wounds by illegal gaffing in violation of the law. I understand, however, that there has been one or two salmon injured by reason of persons throwing rocks at them, stampeding them back down over the rocks and crowding an occasional one out of the water.

The state has three men there at the dam for the purpose of watching the fish and to protect them from unlawful gaffing. When a fish is thus thrown from the water, they take them and put them back again.

It has been suggested to petition the governor to issue a proclamation in order that these fish could be caught and issued to poor for food purposes. This idea is absurd. The governor being a member of the fish and game commission, charged with the responsibility of the perpetuation of the salmon supply would probably not consider such a move, even though the law permitted it, which it does not. The salmon that are being held at Winchester are brook fish and must be saved for that purpose to insure a future supply. To take these fish for food at this time under the plan suggested would be exactly parallel with killing

brood sows, cows, or hens for food. This might be necessary in a time of extreme emergency but at this time such an emergency does not exist. Ordinarily the racks are installed at the hatchery early in May, where the salmon are held until September, when the eggs are taken for artificial propagation. If these fish were not temporarily held at Winchester there would be none for propagation purposes this year.

The importance of saving the brood fish is vital to the salmon industry as it will supply a cheap food for the thousands of fishing along the streams. Don't get alarmed over the situation at Winchester for the state is doing the very best it can under the circumstances. Go and see the fish, but don't throw rocks at them to see them jump, or otherwise disturb them. Give them a chance and all but a very small per cent will reach the hatchery.

JUDGE, YOU'D BE AMAZED TO KNOW HOW SATISFYING THIS LITTLE CHEW IS.

SEE! THE JUDGE HAS USED W-B CUT TOBACCO SINCE IT FIRST CAME ON THE MARKET. IT'S THE LITTLE CHEW THAT SATISFIES.

ZAT SO?

INTELLIGENT people have a way of sizing things up for themselves—W-B CUT is all shreds, all tobacco; and ordinary plug is leaf with a lot of heavy, gummy sweetening, holding it together. But everything doesn't go by quantity either; W-B CUT is a rich, sappy chew, because it's rich, sappy tobacco. It doesn't take so much W-B to satisfy. Take a small chew. Then notice how it lasts.
