Engineer M. B. Germond informed The News yesterday that the road known as the Umpqua-Garden Valley thoroughfare would be practically closed to all traffic for the next several weeks owing to a considerable amount of construction now in progress, and all travel for the Coles Valley district should take one or the other of the two routes leading to this section. Mr. Germond says considerable heavy work is to be accomplished on the above road and that it will be so badly torn up as to eliminate all traffic for some weeks to come.

COOL CREAM SOON AFTER SEPARATING

CORYALLIS, July 23.—Milk should always be separated when warm and the cream cooled immediately. A cooler is a practical utensil to use.
"In passing the milk over a cream cooler from the separator, it is aerated, thus getting rid of the cowy or barny flavor which is so common in milk and cream," said D. Chappell, assistant professor of dairy husbandry in O. A. C. "If a cream cooler is not used, the fresh cream should be placed in a tank of cold running water and stirred frequently as stirring allows the cream

to cool much more rapidly.
"A common fault is to pour the sweet warm cream in with the night's cold cream. This should not be done for the warm cream warms up the cold cream to a point where bacteria will grow rapidly thus causing the cream to sour. The proper method is to have two cream cans. In one keep the cold cream and use the other for cooling the fresh cream. When cold the cream can be poured into the other can of cold cream."

People are living in tents, as dwelling houses are not to be had. The other towns are doing an excellent business. The logging camps are running full blast and dairying is a big business. Judge Marsters predicts a big future for Coos county.

TRAFFIC IS DISORGANIZED.
