Electric Vacuum Washing Machine

The manufacturers guarantee it, and we guarantee it. The guarantee is that it must do satisfactory work. Think of this, a washing that would take you the better part of a forenoon to rub out, done in an hour or two and without any great labor on your part. Five or ten minutes for tub full of clothes. Then run them through the electrically driven wringer, fill washer again and while it is washing the second lot you have swung the wringer over the rinsing tub and put them through, then over the bluing water, put them through, and are done with the first. The second lot being ready, repeat the operation, and there has been no straining or lifting. The cost of machine is still within reach of all—\$95.00 on installments, with a discount for cash.

Sugar Cards to Be Distributed.
Sugar cards are now being printed and within a few days the good housekeeper will have her card in the care of the grocer with which she deals and a record of how many there is in the family and also the amount of sugar on hand at this time. The government requires that all householders return the amount of canning sugar on hand not used for canning by the close of the season. It is two pounds for each person for household use per month and with the card system it is not so easy for the person who is inclined to not play fair to get the sugar. It was because so many were not playing fair with the government on the two pounds a month restriction, that it was found advisable by the food administration to put in the card system. In England there is a limit of

two pounds per month, in France 1 1/2 pounds and in Italy, one pound. To Discourage Runaways.

HOW COLD AFFECTS SOUNDS

Numerous Examples Can Be Given, but Exact Reason is Hard to Explain.

A close observer describes two phenomena of nature not easily explained: First, that natural sounds are very different in the colder than in the warmer months of the year; and, second, that waters have different tints during the colder and warmer months.

A number of examples occur to prove the first phenomenon. Who has not noticed the contrast in the noise of the wind in different seasons when it blows around the corner of the house—in summer what a soft, mellow tone it has and in winter what a harsh, rough whistle?

Then, again, let us stroll along the banks of a stream in May, June or July, and we will observe that the water will then make a gentle, babbling sound, while in November or winter it will, with not great volume, make a hoarse, gurgling noise.

Still again, if we ramble in the woods during late spring or early summer, we cannot but notice with what a softness and mildness the wind has been blowing through the tops of the trees; on the other hand, what a roaring it makes in cold weather.

Perhaps the trees being with or without foliage may cause some difference, but it will be observed in May, before the leaves are out to any extent, there is even then a marked difference between that time and December. Often we have heard it along telegraph wires during the summer and winter, and have noted the contrast.—St. Louis Globe Democrat.
