

The microscope shows that in the blood of every person suffering from typhoid the little germ is present. It is the cause of the disease. They are supposed to get into the water of milk we drink. The germs multiply so that one germ is capable of producing about one hundred million germs in twenty-four hours. That is why if they get into the water supply of a town they multiply so fast that nearly everybody drinking the water comes down with the disease. There are exceptions, however, and they are persons whose blood is perfect, whose blood is pure, and live active. When the germs get into a healthy body they are thrown off with the other poisons. Hence Chicago statistics show that one out of five persons whose blood is pure two years in four years have resulted from the disease.

The best advice we can give is to put the body into a perfectly sound healthy condition. If you have milk, eat meat, eat fruit, and live active.

Thirty years ago Dr. H. V. Pierce, who is consulting surgeon in the Institute of Hygiene, at New York, and Philadelphia, found that men, women and infants who made into an imitative action (without the use of alcohol) seemed to be the very best means of putting the stomach, blood and all organs in proper condition.

This is the first time close to nature's way of treating disease it was possible to go. For over a third of a century Dr. Pierce's Food is a Medical Discovery has been considered the best food for the young, for the old, for the weak, and for the diseased. It is a tissue builder, better than beef oil because it does not sicken the stomach or offend the taste. It strengthens the nervous system, and restores the vitality to the stomach and puts on health first when the weight of the invalid is reduced below the normal.

Accept no substitute for "Golden Medical Discovery." Nothing else is just a guess.
