HIGH HEELED SHOES PUT CORNS ON TOES

Tells Women How to Dry Up a Corn So It Lifts Out Without Pain.

Modern high-heeled footwear buckles the toes and produces corns, and many of the thousands of hospital cases of infection and lockjaw are the result of woman's suicidal habit of trying to cut away these painful pests.
For little cost there can be obtained at any pharmacy a quarter of an ounce of a drug called freeze-one, which is sufficient to rid one's feet of every hard or soft corn or callus without the slightest danger or inconvenience.
A few drops applied directly upon the tender, aching corn stops the soreness and shortly the entire corn, root and all, lifts right out. It is a sticky substance, which dries the moment it is applied, and thousands of men and women use it because the corn shrivels up and comes out without inflaming or even irritating the surrounding tissue or skin. Cut this out and try it if your corns bother you. (Adv.)
