The last heard of the fugitive was at Talent Sunday, and he has probably succeeded in making good his escape, though the authorities think he is still between Dunsmuir and Roseburg, as all trains at these two points have been closely guarded. It is thought that Forester will try to get back to Canada, where he is said to have a wife and child.

A. L. Kruger, dining room inspector of the Southern Pacific Co., arrived in the city today from Oakland, Cal., to look after business matters in connection with his regular duties.

OUR BIRTH RATE IS NORMAL

Census Bureau Statistics Show That Births Exceed Deaths by About One-Third.

The census bureau, on the strength of registered returns, gives figures to show that the birth rate in the United States exceeds the death rate by one-third, which is a gratifying fact. We are not one of the nations that need be anxious on this vital point as far as present conditions are concerned. One of the most serious troubles in France is the warning in its censuses that in some years more of its inhabitants die than are born. Some of its neighbors grow much faster in population. This disparity was somewhat noticed in the past, yet without fully realizing the terrible menace involved. The desolated towns and farms of France are a monument to the old census admonitions and the awful sacrifice of young French manhood is far more dreadful than the devastation. Often have the public men of France sounded an alarm on the defective birth rate. It is much discussed now by thoughtful French legislators and writers. A census always demands intelligent study.

The United States grows by immigration as well as births, and our school system tends to Americanize the whole body of citizens. Our schools are a great melting pot for Americans of the future and to increase their proportionate number. The welfare of children is a great national issue. The birth rate and death rate need continuous attention.

My son, Joe Neavoll, aged 17 years, having left my home without just cause, I will not be responsible for any debts he may contract nor for any deeds he may do, after this date.

MRS. JESSE NEAVOLL.

Hanged for Symmetry.

One rarely sees a hunchbacked person nowadays. People thus afflicted used to be far more numerous. But medical science has learned how to treat such cases, as well as lateral curvatures of the spine, with remarkable success.

Harold J. Rink of Chicago, has newly patented a contrivance for the purpose of straightening backbones which is interesting. The patient is literally hung up in a doorway by the chin, his toes barely touching the ground. Thus his spinal column is pulled straight, while cords attached to belts that he wears, one under the arms, and the other about the hips, exert drags sidewise to correct a curvature.

Guiding Ships into Harbor.

Experiments like those which the navy department is now making toward the piloting of craft into the harbor appear to be meeting with success. They are certainly worth making. The method is a combination of cable with wireless guidance. An earlier check, the frequent breakage of the cable, has been overcome. It only remains to develop the technique in detail. Very likely the time will come when entering New York harbor will be almost as exactly marked a procedure as driving about the streets in the center of the town according to traffic regulations.—New York Sun.
