

How Far Will Your Dollar Go Today ?

What you get for a dollar determines its value. And the secret of economical buying is information. The man or woman who is best informed is the one who buys to best advantage.

Every day this newspaper contains information that you should have in order to increase your buying power. The advertisements are intimate little lessons in economy. They are notices of how—where—when and for what your dollar will go farthest.

This advertising awaits your pleasure. It does not force itself upon you. At your convenience you can study it to learn where to go for the product or service you require—to discover where and how you can buy most easily and to best advantage.

It's a fascinating and worth-while practice to see just how you can make your dollar do its best for you.

The Advertisements will tell you

Veterans Buy on Strength of Bonus

Barometric of what the demand for medium priced homes and small agricultural tracts is to be when the recently enacted soldiers' bonus law is actually put into operation, permitting ex-service men to borrow up to \$3000 for investment in homes and other real estate, are the deals based on the loan feature of the bonus law which local real estate dealers report under way.

Many ex-service men have already contracted for the properties they are going to buy with the loan money, according to the real estate men, and the deals only wait the release of the actual money by the state to be consummated.

Most of these deals are for homes of the \$2000 to \$5000 class, but some few of them are for small berry and orchard tracts.

In few of the cases yet reported have the purchasers sought to make the deal on the strength of the loan money entirely, all making cash payments of \$100 to \$200 to bind the deal until the loan money is available. Thus the cash payments are being brought well above the \$2000 mark, and owners are assuming second mortgages for the balances.

That these men, even when they have no funds to invest other than the loan they will receive from the state, will find plenty of property owners ready and willing to take second mortgages for the balances over \$2000, is the opinion expressed by several realtors. They base their prediction on the fact that \$2000 in cash is much more than most sellers have been receiving on \$4000 and \$5000 deals, and the lenient payment features of the bonus law, which will allow purchasers to make substantial monthly payments on the property in sums approximating normal rents without over burdening financial strain.

Big Hunting Year Expected

SALEM, Aug. 18.—What is expected to be the biggest deer season for years will start on the west side of the Cascade mountains next Saturday. Many campers and mountaineers have reported that animals and tracks have been seen in such numbers as to justify the expectation for a big year, and local sportsmen are unanimous in their opinion that such will be the case.

The season, which began last year September 1, has been advanced this year a few days and will start August 20, remaining open until October 20, for all territory west of the mountains. In the second district east of the Cascades the dates will run from September 1 to October 31.

Much of the hunting will be done in southern Oregon, where sportsmen expect to find the deer most numerous, but reports indicate that good shooting will be found in the Siletz and Tillamook districts and on the upper Santiam and Abiqua rivers. A number of parties have already left the city for southern Oregon and elsewhere ready to be among the mountains when the season opens.

Boys and Girls to Win Prizes

CORVALLIS, Aug. 18.—Pig club members of Oregon will get a chance at \$400 in prizes offered by the Union stock yards of Portland thru G. A. Pierson, president. Pigs must be exhibited at the Pacific International Livestock exposition, where the cash prizes will be awarded.

The purpose of the Union people is to give the boys and girls encouragement for feeding pigs for market and to demonstrate the rate of gain in weight as associated with cost of grain and profit. Any pig club member in the state is eligible, and those who compete will not be barred from any other contest.

Four pigs from the same litter fed for market for a period of four months, entered at the start of the feed period, and records kept for three months, are the rules. County club leaders will supervise the work and records.

For prize awards the state will be divided into three districts, each district to get a first prize of \$10, second of \$5, third of \$2.5, fourth \$2, and fifth \$1.

The first district will consist of Clatsop, Columbia, Tillamook, Washington, Multnomah, Clackamas, and Yamhill counties—the second of Polk, Marion, Lincoln, Benton, Linn, Lane, Douglas, Cook, Curry, Josephine and Jackson—and the third to consist of all remaining counties.

Japanese Prince to Become Regent

By HENRY W. KINNEY. (United Press Staff Correspondent.) TOKYO, Aug. 18.—When the Crown Prince returns from his visit in Europe he will be appointed regent of Japan.

This was the belief today of the best informed public men and journalists, but as yet no whisper even has been allowed to filter through into print. No newspaper would dare discuss the matter as it would mean certain and instant suppression.

The Crown Prince is now of age, according to Japanese count. Over a year ago, when the ill health of the Emperor reached the stage where he could no longer attend public functions, and when it became necessary to have the Emperor or the Crown

Prince receive ambassadors and perform similar duties in his place, there was some talk about appointment of a regent, but the Crown Prince was not mentioned at the time, and the Imperial household department promptly denied the story.

Now it is pointed out, the Crown Prince is receiving the finishing touches in his training as a future sovereign by his visit in Europe and there will be every reason for placing him in the position as regent, when he returns.

In the meantime the press satifies itself with elaborate speculations with regard to the movements of the elder statesman, particularly a long conference which Prince Yamagata and Prince Saionji recently had with the Emperor. Most of the papers confined themselves to the supposition that the talk concerned itself with arrangements for the Crown Prince's return and for his wedding.

Whether the Crown Prince is, in fact, made regent immediately upon his return to Japan or not, the public looks forward towards great changes, owing to his experience abroad. Great satisfaction has been expressed at his rabbling, altho with ordinary mortals in England, France and elsewhere. The mass of the people, as well as many enlightened men of high rank, look forward to a more democratic turn of things.

Final Checks Mailed by Yoncalla Bank

Checks have been prepared and are today being mailed to all creditors who file claims in connection with the Yoncalla State Bank. This is a final dividend representing 10 per cent.

The bank was chartered Feb. 4, 1909, with an authorized capital stock of \$10,000,000. This bank was closed Feb. 22, 1917, by the superintendent of banks and on that date the assets aggregated \$74,352.18.

With the final dividend the depositors have received an aggregate dividend payment of 60 per cent. The liquidation is now closed.

Isaac Taylor returned to his home here last evening after spending the past few days in Seaside visiting with friends and an old school mate to have the Emperor or the Crown

GROWING WINTER WHEAT IN NORTH

Hardier Varieties Introduced That Give Better Yields and Mature Earlier.

BETTER DROUGHT RESISTANT

Better Division of Labor Permits Fall Seeding and Earlier Harvesting—Careful Selection of Seed Will Aid Yield.

(Prepared by the United States Department of Agriculture.)

Since the introduction of the hardy varieties of wheat from southeastern Europe there has been a decided northward movement of the winter-wheat area. This movement has been rapid in recent years. The reasons therefor are the generally large yields of winter wheat due, first, to its earlier maturity, thus enabling it to escape hail, hot winds and disease; second, to its greater drought resistance; and third, to the better division of labor, which it allows through fall seeding and earlier harvesting.

The profitable production of wheat in the eastern part of the United States depends to a considerable extent on the choice of the best-adapted varieties. In general, the soft red winter wheats are popular in the northern United States, especially in New York and Pennsylvania. In the extreme western portion of the eastern area, which is limited on the west approximately by the line of 30 inches of rainfall, hard red winter wheats of the Turkey type are grown. Along the line of 30 inches rainfall there is a transition zone in which hard and soft red winter wheats succeed about equally well.

Better Varieties for Many Farms. Many farmers are doubtless growing poorer varieties of wheat than they might grow if they knew exactly what was adapted to their localities and farms. The United States Department of Agriculture has just issued Farm-

Harvesting Wheat.

ers' Bulletin 1168, Varieties of Winter Wheat, Adapted to the Eastern United States, which charts localities in which various types of wheat can be grown to advantage, and lists the varieties adapted to each particular locality.

The bulletin suggests that there is a large local demand in New England for wheat as a poultry or stock feed, and it should not be difficult for several farmers in almost every neighborhood to sell all the wheat they can raise at a good price to their neighbors. Winter wheat will doubtless produce better average yields, where it can be grown, than spring wheat, if proper cultural methods and suitable varieties are used.

Improve Wheat Yield.

Wheat can be improved in yield and in other desirable characteristics by the selection of good heads or good plants from the general field and growing the seed from each individual head or plant in separate rows. Continued selection will result in constantly improved seed. Another method of purifying a variety and increasing the yield is what may be called mass selection. This consists simply in picking out good heads from the field at large, sowing the selected seed in a small area, and reseeding it the next harvest time. The bulletin may be had on application.

WILL DELIVER LUMBER.

Maynard and Jenks of Glendale will deliver rough or dressed lumber for \$20 per 1000.

WELL-BRED POULTRY AROUSING INTEREST

Poultrymen Help Better Sires—Better Stock Movement.

Nebraska Live Stock Owners Enrolled in Campaign Report Standard-Bred Fowls—Plymouth Rocks and Leghorns Lead.

(Prepared by the United States Department of Agriculture.)

In the absence of census data on the quality of farm poultry, information being received by the United States Department of Agriculture in connection with the Better Sires—Better Stock movement is believed to be of interest to poultrymen. For instance, of 75 livestock owners in Webster

Barred Plymouth Rock.

county, Nebraska, who in one day enrolled in the better sires drive, 65 reported standard-bred fowls. The flocks averaged 94 birds. The principal breeds reported are, in the order stated, Plymouth Rocks, Leghorns, Rhode Island Reds, Orpingtons and Wyandottes. Barred Plymouth Rocks were more numerous than other varieties in the breed. Of the Leghorns the White Leghorns were raised in largest numbers, while of the Wyandottes the white variety was somewhat more popular than the Silver-Laced Wyandottes, which were second. Buff Orpingtons were the only variety of that breed reported.

The facts stated are believed to show interest in the keeping of well-bred poultry, especially since the Better Sires—Better Stock blanks merely call for the number of poultry kept; and in all cases the live-stock owners volunteered the facts about breeds and varieties. It is also noteworthy that, whereas the better-sires drive is aimed chiefly at the improvement of breeding males, in the case of poultry a large majority of females likewise are standard bred.

FARM CHIMNEYS NEED STUDY

They Should Start From Ground and Not Be Placed on Brackets—Make Foundation Solid.

All chimneys for farm buildings should start from the ground. Those placed on brackets are unsafe and often increase the rate of insurance. In a properly designed house of moderate size, one or at most two chimneys, each containing several flues, will serve every purpose. If possible, a flue should be provided for each stove, as much better drafts are thereby obtained, say specialists of the United States Department of Agriculture.

The chimney should have a solid foundation of brick or stone, and if of brick, of course, an extra footing should be laid. The exterior walls should be two bricks thick and the division walls one brick thick. In case the chimney is lined with one of the patent fire-clay linings now on the market one brick will prove of sufficient thickness for the exterior walls.

In case it is necessary to carry a stovepipe any considerable distance inside a partition to reach the chimney, a terra cotta flue should be used, and where a pipe passes completely through a partition it should be protected with a ventilated tinble.
