

What about carbon?

Chemical analysis shows that all lubricating oils are composed of about 85% carbon and 15% hydrogen in chemical combination.

All lubricating oils form carbon when burned in the combustion chamber. The important thing to determine is the amount and kind of carbon formed by the oil.

Some oils form a good deal of carbon, some a small amount; some produce hard, flinty carbon which will cause a great deal of trouble; others produce a soft, flaky carbon that will do no damage.

The important factors determining the amount and kind of carbon formed by a lubricating oil are the crude from which it is made, the process and care of refining it, its purity and stability.

Advantages of Crude and Vacuum Refining

Great care is exercised in selecting the crudes from which Zerolene is made, to secure only those which contain the most desirable lubricating values and at the same time as little as possible, if any, of the undesirable hydrocarbons such as wax and asphaltum.

In selecting crudes for Zerolene, the Standard Oil Company has the advantage of its own large production of practically every type of crude oil. For this reason the company is not compelled to use any particular crude because it happens to be the only one available.

These selected crudes, carefully refined by our own patented, high-vacuum process, produce in Zerolene, oils of the highest lubricating value, which, when burned in the combustion chamber, develop a very small amount of carbon of a soft, flaky nature, which can do no harm and usually blows out entirely with the exhaust.

LARGE AND FINE—FOR A good ton truck in No. 1 condition see Motor Shop Garage.

Many Attend Bible School

The Daily Vacation Bible School at the Baptist church is proving so popular among the children that registration may have to be closed soon. The opening morning there were 87 children between 6 and 14 years who applied for admission. Within three mornings the registration has risen to more than 150. The teaching staff of about 20 is being enlarged to meet the demands.

Each day the children commit to

memory a large amount of scripture, hear a good Bible story, sometimes dramatizing it. They also sing patriotic songs and hymns. A part of the program that they greatly enjoy is the calisthenics and the craft work which consists in basket making, sewing, quilty work, knife and saw work. A large amount of the girls' sewing materials is donated by the children's parents. Cotton, scraps of gingham, lace, cretonne, and many other kinds of scraps are needed yet. Any of the parents who have such things may send them by the children. Or any who may be interested in the school who have no children in it may do the same.

CLASSIFIED COLUMN

ALL NEW CLASSIFIED ADVERTISEMENTS WILL BE FOUND ON LAST PAGE UNDER HEADING "NEW TODAY."

Important to Every Housewife—

Some New Uses of the "Old Standby" Kingsford's Corn Starch

If your recipe calls for four eggs to one quart of milk, use three eggs and for the egg omitted use one-half tablespoonful of Kingsford's Corn Starch. For smoother, glossier gravies and sauces use a dessert spoonful of Kingsford's instead of a tablespoonful of wheat flour. For lighter, flakier biscuits, pie crusts and muffins, make your pastry flour with one-fourth cup of Kingsford's and three-fourths cup wheat flour.

A little Kingsford's Corn Starch dusted on top of cakes before icing prevents the frosting from running off.

A quarter teaspoonful of Kingsford's Corn Starch put into each of your salt-shakers will keep the salt from caking.

FREE: Ask your grocer or write Johnson-Lieber Company, Portland, Oregon, for beautiful folder of the new Kingsford's Corn Starch recipes.

AMERICA'S FAVORITE SINCE 1848

She used to be plain

NOW it is possible for even the plainest woman to be really attractive, even though her hair is straight, lifeless and full of dandruff.

The new Wildroot treatment soon makes a remarkable change.
