

CONGRESSMAN KEARNS SOUNDS WARNING AGAINST HENRY FORD'S MUSCLE SHOALS PLAN

GOVERNMENT BUILT DAM AT MUSCLE SHOALS

CONGRESSMAN KEARNS WHO SAYS FORD IS FOOLING THE FARMERS

Henry Ford's plan to secure a 100-year title to Muscle Shoals, the gigantic producer of water power, has received a severe jolt at the hands of Congressman C. C. Kearns of Ohio, who filed with the House of Representatives an official report charging Ford with an attempt to fool the farmer and laboring man of the country.

In his report, Kearns charges that Ford's promises of cheap fertilizer to farmers and the employment of a million men, if he should get Muscle Shoals, are without foundation. The Ohio Congressman's charges have aroused much opposition to the already much discussed Ford scheme.

Congressman Kearns' report, which is also signed by seven other members of the House Military Affairs Committee, condemns the

Ford promise as designed to gain popular support for his Muscle Shoals plan. The Congressman who signs the report says Ford gives no guarantee to manufacture fertilizer at all.

No Fertilizer Guarantee.

"Mr. Ford has at all times steadfastly refused to bind his proposed company in the contract to make fertilizer if certain contingencies should happen," says this latest report on the Ford plan. "Our position is that this is a hollow promise made to enlist the support of the farmers and not absolutely binding on any fact contained in the contract or existing outside of the contract."

If Ford's proposal is accepted, Congressman Kearns declares the company at Muscle Shoals will be given the use of two dams and powerhouse fully equipped for a period of 100 years and it will only be required to pay as rental therefor 4 per cent on \$50,000,000, although the dams will have cost the taxpayers of the country \$67,000,000.

"It must be remembered," says

he, "that Mr. Ford does not own these dams but he is given the use of them. Hence if the dams should break the government must stand not only the cost of rebuilding, but must pay any damage that arises in consequence of the escape of this impounded water. How many millions, or even billions, this is going to amount to in the course of 100 years we do not know and neither do you."

If Muscle Shoals is turned over to Mr. Ford, Mr. Kearns says, Ford would not have to pay taxes on the cost of the dams at any time during his 100-year period. The company to be organized by Mr. Ford would be a private company, he alleges, doing business for itself and uncontrolled or unhampered in any way by any utility commission, either State or Federal, except that if this company makes fertilizer it must make it at a profit not to exceed 8 per cent.

If Mr. Ford's proposition is accepted, the Congressman declares, Ford will receive privileges and rights denied to every other man or group of men at the United States.

their share of blame and they have been characterized as blind because they do not see our follies. Others attempt to solve the problem by saying that the fault lies with youth itself, while still others claim the freedom of today is due to war, to the abandonment of religion, or to the decay of home influence. Answers are hazy and the question still remains."

BIDS FOR PAINTING CANYONVILLE SCHOOL HOUSE

Sealed bids to contract the painting of the Canyonville school house will be received up to 6 o'clock p. m. Thursday, July 20th, 1932. Bidding is for 60 ft. square and 28 ft. high. The school board reserves the right to reject any and all bids.

Dated July 14, 1932.
HARRIETT ODLE,
School Clerk, Canyonville, Ore.

Tuition Fees Will Be Raised

EUGENE, July 17.—Tuition fees for non-resident students in the Oregon Agricultural college and the University of Oregon were raised from \$69 a year to \$105 a year, effective with the opening of the next fall term, by action of joint committee of the regents of both institutions held in Albany this week.

This action, taken as a means of reducing the burden of state taxation, puts the two Oregon institutions on a par with the Universities of Washington and California in the matter of non-resident tuition. In each of the neighboring states the differential between the charges paid by the residents and those by students from outside the state is equal to the \$105 to be charged in Oregon. Under the new system graduate students in both institutions will be exempt and ex-servicemen will be held for only half of the new fee. The

regents' committee emphasizes that the increased fee is not retroactive; any non-resident who has entered the university or the college under the present fee of \$69 a year will be permitted to finish his course at that rate.

It was the aim of the committee, as explained after the meeting, to put the fees where they would not be prohibitive and at the same time would be on an even basis with the other states, so that the flow of non-resident students would neither be entirely cut off nor become a flood which would tax the institutions' facilities.

Members of the joint committee in charge of the matter of fees are Judge J. W. Hamilton, of Roseburg, chairman, and C. E. Woodson, of Heppner, both of the university board of regents, and J. K. Weatherford, of Albany, chairman, and Walter M. Pierce, of La Grande, both of the college board. President P. L. Campbell, of the university, and President W. J. Kerr, of the college, met with the committee.

TO THE FEDERATED SHOP CRAFTS OF ROSEBURG

Gentlemen: I respectfully ask that you have Mr. Van Shike attend the city council on July 17th so that he may be heard in person as this will be much better than his affidavit. L. L. Maheux, City Marshal.

REVIVAL MEETING NOTICE

The meetings at the tent on the court house grounds continue with fair interest. The sermon last night by Evangelist McKay was a rare treat. His text, or theme, was, "God, Man, and the Record."

Come tonight and hear the discourse on the "Six States of Man," showing his states or conditions here, in the intermediate, and in the Eternal states.

No collections taken at these meetings. Friend, is it You we want, not your money. Come!

FARM NEWS

DAMAGE DONE TO GRAIN BY MOTHS

Insects Can Be Destroyed by Use of Heat or by Fumigation With Poisonous Gases.

CARBON DISULPHID IS BEST

By Exercising Proper Precautions Infestations in Field Can Be Reduced—Thoroughly Clean Old Bins and Granaries.

(Prepared by the United States Department of Agriculture)

Most of the damage done by insects to grain in storage and shipment is due to four species, the granary weevil, the rice or black weevil, the lesser grain borer or Australian weevil, and the Angoumois grain moth, according to Farmers' Bulletin 1299, "Common Grain Pests," prepared by E. A. Back and R. T. Cotton and just published by the United States Department of Agriculture. Others of the 40 species or groups of species described in the bulletin can cause great damage if storage conditions are unusually favorable for their increase.

Remedial measures are mentioned only briefly in the bulletin. The insects, it is said, can be destroyed by the use of heat, or by fumigation with poisonous gases. A temperature of 120 degrees to 130 degrees, Fahrenheit, maintained for a short time, will kill all stages of grain-infesting insects, without injury to the germinating qualities of the grain. Carbon disulphid, carbon tetrachlorid and hydrocyanic acid gas are the fumigants in most common use today in treating infested grain. Of these, carbon disulphid is the best for treating grain in the bulk. It is said. Information on this subject is contained in other publications of the department.

Prevent Infestation. Infestation of grain in the field cannot be entirely prevented, but, by proper precautions, it can be reduced to a minimum, the bulletin points out. The first generation of insects in the maturing grain is usually small, and if the grain is cut as soon as ripe, threshed as soon as dry, and then placed in clean, deep bins, the damage from this source will be slight.

It is when the grain is left in the field long after it is ripe that serious infestation results, for the insects increase in one or two generations to enormous numbers. In the case of corn in the field, only ears damaged through carelessness in shucking, so

Tip End of Ear of Corn Showing Round Holes in Kernels Made by the Angoumois Grain Moth.

that the kernels are exposed, are subject to the attack of grain insects. Farmers should therefore, it is said, grow a variety of corn that develops a long, tight shuck.

Newly harvested small grain should not be stored unthreshed for any length of time, as in this condition it is very susceptible to infestation. If promptly threshed and stored in deep bins, only a thin layer on top of the bin is likely to become infested. Corn may be stored in the shuck if the husk is long and tight and fully covers the tip, but all ears with loose, broken

shuck or damaged husks should be shucked and stored separately.

Avoid Dirty Bins.

Clean grain should never be stored in old bins, granaries or storehouses until they have been thoroughly cleaned and freed from the accumulations of waste grain and other materials harboring grain insects.

Bags of all kinds that have previously held grain should not be allowed in granaries or warehouses or be refilled until they have been sterilized or otherwise freed from insects. The use of tight cribs will keep the grain free from infestation by insects that might fly in from the outside.

Copies of the bulletin may be had free upon application to the department at Washington.

BEST DEPTH OF CULTIVATION

When Corn Is Eighteen Inches High Roots Will Meet Across 3½-Foot Row in Friable Soil.

When the stalks of corn are 18 inches high, the roots have met across a 3½-foot row in light, friable soils. Deep cultivation at this time will cut many of the roots and check the growth of the plants. A good rule to follow is to cultivate deep early in the season, and shallow later when the plants are larger.

PROPER BALANCE TO MANURE

Some Farmers Try Little Experiment on Small Piece of Land to Find Condition.

It is a pretty good idea, and one followed by a lot of hard-headed, practical farmers, to balance the barnyard manure a little with either rock or acid phosphate. Barnyard manure is a balanced ration when it comes to plant foods for some crops. That is why some farmers try a little experiment on a half acre or so of ground just to see what their land lacks. About forty or fifty pounds of acid phosphate per ton of manure, or 400 to 500 pounds per acre, may be applied to a small part of the field, and the results will show whether it will pay to put the fertilizer on the whole field.

It makes the acid phosphate easy to apply simply to spread it evenly on the top of each acre of land of manure so that each ton of the manure will carry with it the above mentioned amount of the phosphate.

ALFALFA SEEDED IN SUMMER

Considerable Success Attained at University of Illinois in Rotation With Corn.

Considerable success has been attained in seeding alfalfa on the dairy farm at the University of Illinois where a rotation of corn for silage and alfalfa for hay are the principal crops. Fall wheat is sown after the corn is cut for the silo. The next year the wheat stubble is plowed as early as possible and a very thorough seed bed prepared. The alfalfa is seeded as soon as there is sufficient rain. About the 28th of September wheat is drilled. This gives a crop of wheat and two cuttings of alfalfa the next year.

LIME INFLUENCE IS LASTING

Where Applied in Liberal Quantities Soil Shows Beneficial Effects for Years.

It has been observed that where lime has been applied in fairly liberal quantities to soil, the soil shows the beneficial effects for a number of years afterward. In long-time tests made by the Ohio experiment station the crop yields during the last six years of a 13-year period were much larger than during the first seven years.

PROVIDE RIGHT VENTILATION

Leave Opening on South Side of House to Equal One-Tenth of Total Floor Space.

In providing ventilation, enough space should be left open in the south side of poultry houses so that the open front will equal one-tenth of the total floor space. This open screen ought to be near the bottom of the south side rather than at the top, so that the warm air from the roosts will not flow up and out of the open space.

Make Cooking a Real Pleasure.

Prepare your food with a "Waterless Cooker." It retains all the natural flavor; more economical; no worry; foods can't burn; cooks vegetables and meats better than any other way. We want you to see the new Cooker.

RAVENS—From The Buffers Shovel. Farm are now offered for sale. A thirty bunch of registered yearlings and two-year-olds with size and quality combined. 10 these you will receive the benefit from years of selective breeding. Mrs. Walter E. Stafford, route 2, Junction City, Ore. Phone, Eugene 32-12.
FOR SALE OR TRADE for Roseburg property. 243 acres in Clatsop, Wn. A room house, new big barn with hay-mow for 20 tons, 2 all-year springing pigs, 30 acres or more cleared, balance yellow pine, tamarack and fir, good new black loam soil, just 1600 lb. brown Percherons, well matched, 1 2-year-old Percheron on foal, 2 saddle horses, 3 sets harness, 2 touring Elkhart, wide tire wagon, mower, rake, harrow, garden cultivator, 2 plows, some household goods. This place is an easily road from Lewiston, Ids. to Grange, Ore. Ideal stopping place for travelers. Will sacrifice for quick deal. Mrs. H. G. Galt, Clatsop, Wn. Austin Co.

SAVANT IS BUFFER FOR FLAPPERS

ATLANTIC CITY, N. J., July 17.—The flapper, both masculine and feminine, has good standards and aspirations and critics are unwarranted. Daniel Dehrie, 16-old honor student, in his valedictory address at the commencement of the Atlantic City high school.

People have the idea," he said, "because a girl wears short, red dresses, bobs her hair and has a vocabulary of her own, she is immoral, and because a modern covers sixty miles in sixty minutes in his motor car, because he goes nightly to the latest jazz music and considers parental discipline to be administered by him to his parents, that he is becoming overbearing and wayward and he grows up unworthy and unable to carry his burden of youth."

Youth has been accused of everything that is sordid because a few rowdies and self-conceited persons have been allowed to have their say. They merely have a wronged view."

Flappers, both masculine and feminine, he said, are signs of the time. They want criticism where it belongs and not upon youth.

Where does the fault lie?" the boy asked. "Our parents have received

all the new ones in Face Powders

If you have heard of a new face powder that we haven't heard of, tell us about it and we will get it for you, or there are a lot of your favorite brands sold by us, and those advertised in the magazines every month.
