SMALL CAR ADAPTED TO UNIVERSAL USES

Looking large as one of the important factors contributing to the improvement of traffic conditions, not only in metropolitan centers but on main traveled highways where congestion develops particularly on Sundays and holidays, is the increasing tendency toward the use of the small, light car.

Personal convenience, the element which enters strongly into the lives of all of us, appears as the principal incentive back of the growing swing of sentiment toward the more compact motor car unit.

The public, quick to respond to things which insure further comfort and safety in motoring, has been observant of the advantages the small car has in the traffic line, its ability to stop quick, the ease with which it gets in and out of parking spaces and its general flexibility.

Always signal with the hand when slowing down, turning, or stopping, even though you have an automatic or mechanical warning device.

HOW TO PROTECT YOUR MOTOR CAR IN COLD WEATHER

"The average car owner is seldom in a position to know just what must be done to his car in the winter to approach as nearly as possible conditions as they exist in warm weather. For this reason," says Earl Burr, of Burr & Sons, local Studebaker dealers, "the following suggestions should be carefully observed by all automobile owners."

Before any anti-freeze solution is used, the water circulating system should be inspected for leaks, and repairs made, if necessary. It is usually a good plan to replace hose connections at this time of the year. Do not use anti-freeze compounds containing calcium chloride or other similar compounds, as they corrode the inside of the radiator.

The only satisfactory solution of which we know is alcohol and water. Denatured alcohol is preferred, wood alcohol can be used. Wood alcohol often contains free acetic acid and should never be used unless it is known to be free from acid. If acid is present, damage to the radiator will result.

The following table shows different proportioned mixtures with temperatures at which the solution will begin to freeze:

Alcohol	Water	Begins to freeze Deg. Fahr.
19 pct.	80 pct.	27
20 pct.	80 pct.	19
30 pct.	70 pct.	10
40 pct.	60 pct.	2 below 0
50 pct.	50 pct.	18 below 0

Glycerine is sometimes used with alcohol to keep the alcohol evaporation to a minimum. However, it is rather expensive and also has a tendency to damage the rubber hose connections. If glycerine is used, mix the alcohol and glycerine in equal proportions and use this mixture in the same percentage as alcohol in the above table.

It must be remembered that it is necessary to add alcohol from time to time to replace what is lost due to evaporation. Whenever necessary to fill the radiator, to replace loss by evaporation, use a mixture of 40 water and 60 alcohol. During the winter months the fan belt can be loosened, which will reduce the flow of air through the radiator and thereby allow motor to run warmer than it otherwise would.

It will assist greatly in approximating the summer temperature of the motor if radiator and hood covers are used. With a radiator cover that is adjustable, a large part of the radiator can be covered, allowing the motor to readily warm up, and then adjusted to a suitable opening to keep the motor running warm but still not allowing it to overheat. A hood cover will keep heat under the hood, assisting in keeping the motor warm while running and also keeping the motor from cooling off rapidly when stopped, thereby making starting easier the next time the motor is started.

Carburetor
Due to the low gravity gasoline now being used, it is very essential, more especially in cold weather, to get as much heat as possible to the mixture to properly vaporize the gasoline to prevent condensation. It will assist greatly in approximating the summer temperature of the motor if radiator and hood covers are used as instructed above.

In starting the motor, make sure that the choke is pulled all the way out until the motor starts, then push it in slightly until the motor warms up but do not have it even partly out longer than is necessary. Raising a cold motor will not warm it up, retard the spark and let the engine idle slowly.

Lubricating System
Oil should be drained more frequently from the motor in winter than in summer. Cold temperature increases the dilution of the oil by raw fuel, especially when the choke is kept closed too long. It is not advisable to drive a car until after the motor has been turning over at a slow rate of speed long enough to give the oil a chance to get well into all of the working parts.

Condensation in the cylinders due to cold weather often results in the mixing of the gasoline with the oil. We recommend under average conditions, the oil be drained approximately every 1000 miles in order to guard against excessive wear of the bearings or cylinder walls. However, it is advisable to change the oil every month during winter driving regardless of when fresh oil was last added. The oil pan should be removed and washed out with kerosene occasionally in order to prevent any accumulation of sediment which might have a detrimental effect upon the bearings.

CORN HUSKERS ARE SCARCE THIS SEASON IN IOWA

(International News Service.)
SIoux CITY, Ia., Oct. 31.—An unusually large demand for corn huskers throughout the corn belt will fall into this month, according to J. W. Helms, Federal employment agent here.

Corn-husking has been delayed by wet and unusually mild weather. As a result the work is piling up and will cause a serious jam within the next few weeks. From four to five cents a bushel will be paid for husking.

DEMAND FOR SMALL CARS GROWS APACE

The response is apparent in the constantly growing demand for the small car, a demand which has been unusually heavy since the first of the present year and which is further expressing itself as the enclosed car buying season approaches.

Men whose business keeps them on the exceptional facilities afforded by the small car and they were quick to adapt it as their standard motor car equipment.

Owners of large cars, finding their movements more and more restricted as traffic congestion increases, are rapidly reaching the conclusion that as an auxiliary motor transportation unit the small car is an essential business convenience.

Another interesting feature is the partiality which women drivers are showing for the smaller car. They find it more convenient and less fatiguing to operate, affording them a quick and convenient means of transportation for the shopping tours, for little trips to market, for afternoon calls and for meeting other family requirements.

And new buyers, profiting by the experience of others, in investigating the merits of the small car, find it meets all modern motoring demands with the additional advantage of easier handling in the traffic line, thereby effecting a greater element of safety.

Short wheelbase, small turning radius, ease of steering, the impossibility of failure to accomplish gear shift and do it noiselessly, positive brakes and a motor noted for its dependability are features of the Ford which have contributed largely in making it the most popular of all small cars.

And a much higher degree of owner satisfaction has been effected in these cars by recent improvements in both open and enclosed types, resulting in better style and greater riding comfort.

STYLES "DRESSIER" NOW

(International News Service.)
LONDON, Oct. 31.—Men are becoming more "dressy."

This is the verdict of the snappy men's wear periodicals on the new season's English dress designs for men.

They see a return to pre-war styles instead of the "evanescent lounge suit and sloppy overcoat," and express the fervent hope that it will be permanent.

REPRESENTATIVE OF W. B. A. HERE

Mrs. Caroline O'Brien of Portland has been spending the past week in Roseburg in the interest of the Women's Benefit Association of the Macabees, planning a district rally to be held at Eugene November 9. The Roseburg review number 11 will participate and the guard team of Roseburg will give a fancy drill which will be a special feature of the rally. Mrs. O'Brien left this morning for Ashland where she will hold the southern Oregon rally. During Mrs. O'Brien's visit in this city she was entertained by the women of the Benefit Association.

ROLLER SKATING OUT OF DOORS POPULAR IN OHIO

(International News Service.)
LIMA, Ohio, Oct. 31.—A new fad is popular with young women in Putnam county. Lure of the country at autumn time is abetting the practice. The women folk have donned skates and are hiking thru the rural districts on the rollers.

The record for long journeys thus far, goes to Misses Catherine Seaman and Ruth Belch, both of Columbus Grove. Starting on Sunday morning they skated to Ottawa, over a road of Kentucky rock, in 1 hour and 15 minutes. They said they will repeat the experience. The distance was eight miles. Long journeys on rollers, and skating parties, have supplanted winter roasts and motoring trips for young people in Putnam county.

Try to drive with them the bus as little as possible. A sudden stop may stop pedestrians in their tracks rather than warning them.

Four more snow and still growing! The Roseburg News-Review is recognized as one of the best papers in the state. Try our circulation service. It is the most skeptical.

The intercollegiate season will open February 2, when Oregon meets the team from Oregon Agricultural college. An invasion of the northwestern will begin February 15, when the varsity will meet wrestlers of the University of Idaho, Washington State, Oregon and University of Washington. The Websters will close the season on March 6, with G. A. C. as opponents.

SCHOOL CENSUS IS BEING TAKEN

A complete census of all the children of the county who are of school age is being made throughout the county this week. Reports will not be filed until the latter part of the week or the fore part of next. This work is under the supervision of the county superintendent and is being conducted in every school district. According to O. C. Brown, county superintendent, the school population for the past few years has not showed much fluctuation and although it has shifted its center the average remains approximately the same. This year, however, the superintendent announces that an increase will surprise him. All over the state it has been found that the increase this year has been obvious and it is expected that Douglas County will hold its own.

H. H. Church has been appointed to take the city census and is carrying out that work this week. So far a good part of the territory has been covered, but no definite figures are obtainable which show any increase has occurred since last year. When the report does come in, an increased school population will naturally mean increased population for the city.

RESISTS PITCHFORK BLOW; RETALIATES WITH SLEDGE

(International News Service.)
DES MOINES, Ia., Oct. 31.—A pair of modern cavemen, who playfully battled with sledgehammers and pitchforks appeared in court here as answer charges of "assault with intent to do great bodily harm."

According to the evidence George C. Russell attacked Wayne Wright. Both are farmers. Russell insisted that when he entered Wright's barnyard last February Wright took off his coat and picked up a sledge hammer.

Wright's menacing attitude provoked Russell, the latter admitted. Evidence showed he tapped Wright on the head a few times with a pitchfork.
