ROSEBURG—OAKLAND

Swim for Health and Pleasure

Come and swim or learn to swim in the best swimming water in Oregon, the Umpqua River just above the city where the water is clean and pure. If you have no bathing suit, you can rent one on the grounds for a nominal fee. Also nice clean dressing rooms for ladies and men with a board walk right into the water. Raft and spring board out in deep water for those who wish to dive. Swimming contests will be staged, so get in practice for these.

Directions by way of Oak street bridge, and follow the river to above the dam, or by way of Mill street and the swinging bridge.

Refreshments served on the grounds.

DECISION GIVES HAND VICTORY IN BOUT WITH DAVIS

MARSHFIELD, Ore., July 7.—Charles Davis, local wrestler, lost the decision to Ralph Hand in a long match at Crescent City Saturday night, before a crowd of 1600 people. The match was very even throughout, and the judges' decision was not received favorably. It was declared by several who were present, a draw being the only apparent fair decision.

Hand got the first fall from Davis after an hour's wrestling, with a toe-hold, while Davis took the second fall five minutes later with the same hold. Then after two hours more of wrestling neither was able to get a fall, but Hand was given the decision.

It was stated that "Bull" Montana of movie fame had challenged the winner in a contest at San Francisco soon. It is not known whether Hand will accept the challenge.

As a climax to the Fourth of July celebration at Myrtle Point, the wrestling match between Ted Thye of Portland and Sam Grant of Spokane drew a good sized crowd. Ted Thye won by two falls from Grant, the first in 22 minutes and the second in three minutes.

Thye won both his falls by his famous hold, the wristlock.

FIRST 1925 PRUNE SALE IN WASHINGTON 12 CTS FOR 308

SALEM, Ore., June 7.—According to a report reaching Salem the Washington Growers association of Clark county, has confirmed the first sale to be reported of the 1925 crop of prunes, the report stating that the association has confirmed 1925 30s at 11 cents and 1925 40s at 8 1/2 cents.

The peak price at which 1924 30s were sold was 12 cents, and the 1924 crop of 40s opened last year at 8 1/2 cents.

According to estimates by local packers there are less than 5,000,000 pounds of the northwest crop of 1924s left on the coast.

Heat with gas.

LOCAL BOYS WIN TENNIS MATCHES AT NORTH BEND

Robert Gile, Jr., Hall Seely, Merrill Ritter, Jr., and John Hunt have returned from North Bend, where they defeated the North Bend high school, and a professional team in a closely contested tennis tournament. The Roseburg boys won every match by straight sets, and brought back several beautiful myrtle wood cups as trophies.

In singles "Bob" Gile defeated Jack East, professional, who has been undefeated for two years. Gile took his sets 6-4 and 6-0. Ritter and Hunt won the professional doubles 6-2 and 6-1, while Gile and Seely took the high school doubles 6-4 and 6-2.

The boys found the North Bend court to be very fast and were greatly pleased with the fine reception given them by the Coos Bay tennis players.

Spend your vacation at Boswell Mineral Springs.

GRAIN MARKET ON DOWNWARD TREND; CROP IMPROVING

(Associated Press Leased Wire.)
EUGENE, Ore., July 8.—Mark Broom, alleged moonshiner, who, according to officers, has been sought for the past two years on liquor charges resulting from a raid in September 1923, and who was indicted at a recent session of the grand jury on six counts, was found guilty by a trial jury in circuit court here yesterday on a charge of setting up and operating a distillery. The jury deliberated for more than three hours before arriving at a verdict.

SUMMER HOBIERY
That women's silk hose at \$1.00 at Carr's is still by far the best buy anywhere. Big line of men's, women's and children's summer hose at Carr's.

(Associated Press Leased Wire.)
PORTLAND, July 8.—The summary of weather and crop conditions in Oregon for the week ending July 7 issued today by the United States Weather Bureau shows conditions generally good.

The report follows:
The weather was generally moderately warm, though on several mornings the temperature fell rather low. Precipitation was confined to a few scattered showers

Ask for Horlick's The ORIGINAL Malted Milk Safe Milk and Diet For Infants, Invalids, The Aged Nourishing—Digestible—No Cooking—No Avoid Imitations—Substitutes

In Eastern localities and some light misty rain along the coast. In Malheur county some local damage was done by hail, high wind, and heavy rain. Water for irrigation is generally abundant, but the breaking of a reservoir in eastern Baker county is expected to cause a local shortage of water later.

Cereals: Winter and early sown spring grain is maturing rapidly, and harvest is well under way in the milder sections. The extreme heat of the previous week caused damage to small grain, but it was not so great as was feared. Corn is doing well.

Fruits: Early apples are in market in a number of places. The main crop of apples is sizing well, but some injury from heat is reported. The ripening of cherries is extending to some of the later districts. Picking of raspberries and loganberries is advancing rapidly.

Loganberries were somewhat hurt by the heat of the previous week. Black raspberries are more plentiful than usual. Apricots and early peaches are becoming more plentiful in the market.

Meadows, pastures and ranges: The second crop of alfalfa is ready to be cut in Umatilla county. Most clover, vetch, and oat hay in the Willamette valley has been cut.

Vetch and oats generally gave good results, clover was good in some localities, but other places had very little following the unfavorable season of 1924. Baling is in progress in southern counties.

Pastures, where not irrigated, are drying, but have generally held up better than usual. Low ranges are drying, but an abundance of feed continues at high levels.

Food on range is generally sufficient.

Livestock: Some lambs and range cattle have been marketed in good condition. Stock is generally in good condition.

Miscellaneous: Planting of the late crop of potatoes is mostly complete, and the crop is coming up well. Tomatoes are ripening in Umatilla county. In the Willamette valley there is complaint of celery going to seed. Hops are setting. Some flax is ready to pull; much flax headed short. A large acreage of broccoli is being planted. Unirrigated gardens need rain.

RUBBER PRICE IS HIGHEST IN NINE YEARS IN NINE

LONDON, July 8.—Rubber for immediate delivery touched 4 1/2 pence per pound on the exchange here today, the highest quotation since February 1916.

The advance is due to a decreased supply as a result of the scheme for restriction of output from rubber plantations and a continuing insistent demand for rubber from manufacturers, especially in the United States and Europe.

Have You a Bad Back? Then the Advice of This Roseburg Resident Will Interest You.

Does your back ache night and day? Blister work; destroy your rest? Are you tortured with stabbing pains? When you stoop, lift or bend? Then likely your kidneys are weak. More troubles, may soon appear. Headaches, dizziness, nervousness; Or uric acid and its ills, Help your weakened kidneys with a stimulant diuretic. Use Doan's Pills.

Read this Roseburg testimony: P. P. Oar, 6 North Ave., says: "My kidneys troubled me a lot and I had such backaches I could hardly stoop. My kidneys didn't act right, either. Doan's Pills soon fixed me up in good shape. The aches and pains left my back and my kidneys were regulated."

Get a bottle at dealers. Foster-Milburn Co., Mfrs., Buffalo, N. Y.

TRADE SCHOOL FOR BOYS MAINTAINED

Seven hundred boys in the most unique school in the world, during the year 1924 earned \$400,000 for themselves and manufactured \$770,000 worth of materials. That's the remarkable record of the Henry Ford Trade School in the eighth year of its existence.

The idea of such a school was conceived by Mr. Ford in 1916, and in October of that year it was organized and incorporated under the laws of Michigan as a private school. The spur behind the act on Mr. Ford's part was a desire to furnish the opportunity for boys to learn a trade; more especially boys whose circumstances make it imperative that they earn something toward their own support.

And just how popular the school has become may be judged from the fact that at the present time the faculty comprises fifty instructors, the pupils number more than 700, and there are more than 3,000 boys on the waiting list eager to be enrolled.

Of course with a waiting list of this magnitude, at present there is little hope for our out of town boys being admitted. In fact the institution is not big enough to accommodate even the Detroit youths who have felt the urge to learn and earn the Ford way.

The entrance age for the boys desiring to attend the school is between 12 and 15 years of age, and when he graduates at 18, providing he has been conscientious in his studies and work, he is master of a highly remunerative trade and can command a good job of money.

However, a majority of the graduates are absorbed by the Ford Motor Company, the young men preferring to work for the company.

The school workshop is in one of the buildings of the Highland Park Plant of the Ford Motor Company adjoining the school and is fitted with more than \$500,000 worth of equipment and has 35,000 square feet of floor space. In this shop a variety of Ford parts are knowledge gained in the class manufactured, all of which are bought by the Ford Motor Company if they pass inspection. When a boy has become proficient in his work he is placed in the tool department where he makes tools, files, dies and fixtures. These also must pass rigid inspection before being accepted by the company.

The school curriculum includes English, mechanical drawing, shop arithmetic, algebra, geometry, trigonometry, physics, chemistry, qualitative analysis, quantitative analysis, metallurgy, metallography, and civics; while shop classes provide instruction in the operation of lathes, milling machines, grinders, shapers, and nickel plating. Also included in this part of the student's education is a complete course in bench, die, gage, carpenter shop, sheet metal, hardening, forge and foundry operation.

FARM NEWS

For codling-moth in southern Oregon the growers find that a succession of cover sprays at about two week intervals is applied to get best results in clean fruit. The practice is continued through the early summer months with cover sprays recommended in the experiment station spray program for Oregon.

Watch the chicks more than the thermometer. They will show you if the temperature is right—no matter what the thermometer reads. Watch them constantly during the first week as this is the critical period, advises the O. A. C. experiment station.

Anthracnose canker and fruit rot are prevented by a single thorough application of bordeaux mixture 4-4-50. Good economy is to put the bordeaux on with the July or August worm spray, says the O. A. C. experiment station.

Have you sprayed the brooder house yet? Contaminated houses and equipment are the cause of spreading much disease in Oregon, the experiment station says. Use a foot spray material with a coal tar base and be sure to reach all of the corners and cracks in the house.

Red spiders, which are likely to strike at almost any plant in Oregon from low-growing annuals to tall trees, develop most rapidly and become most harmful in dry weather. The best protection so far reported by the Oregon experiment station is dusting with sulfur. Most sulfur containing insecticides are effective if applied thoroughly, and some growers use liquid sulfur solutions.

Anthracnose disease of gooseberries is indicated by the presence of many small dark spots on the leaves that often cause the leaves to drop. Bordeaux applied in 4-4-50 strength thoroughly to both surfaces of the leaves is the remedy found effective by the Oregon experiment station. Directions for making and using the spray may be had on application to the agricultural college at Corvallis.

The stand of clover obtained on the experiment station fields has been improved 50 per cent by the use of lime on poor land. Through a drowth, lime especially helps the young clover and grass to survive successfully.

Rotation with legumes is necessary to keep up the nitrogen and humus supply of soils for general farming, says the experiment station. Where legumes fall, due to soil acidity, the use of lime becomes essential to the establishment of a permanent system of soil management. Ground limestone added to the acid soils of the station lands near Corvallis react with the soil acids and overcome the sourness of the soils.

Corn silage, free from mold and made from fairly mature corn, is excelled in Oregon as a cheap winter ration for horses, says the experiment station.

A stunted yearling generally means a stunted mature horse, reports the experiment station. A growthy yearling does not require the feed and care afterward that a stunted one does.

Cottonseed meal sharpens the appetites of fattening animals, causing them to eat more and make greater gains.

Anthracnose disease of gooseberries is indicated by the presence of many small dark spots on the leaves to drop. Bordeaux applied in 4-4-50 strength thoroughly to both surfaces of the leaves is the remedy found effective by the Oregon experiment station. Directions for making and using the spray may be had on application to the agricultural college at Corvallis.

Red sorrel thrives in Oregon on acid soil—clover won't, the experiment station finds. The heavier and sourer the soil becomes, the better the crop of sorrel, and the more evident the need to lime.

Making Hogs Profitable
Oregon produces about 210,000 hogs annually, while it consumes about 390,000 head annually. But the state college of agriculture is recommending that hogs be raised in this state only on the farm waste basis, and that they be little or no profit in the enterprise. The hog is a great scavenger, a grazing animal. He will make pork shut up in a pen, but not profitable pork unless his food is mostly something other than what he will eat.—Portland Telegram.

Codling Moth Control
(By B. D. Cooney)
All apple and pear growers should at this time have finished the second moth spray. No time should be lost by those who have not done this important work. Field examinations show the moth to be at the peak in egg deposition. This means that a flood of worms will be attacking apples and pears within one week or ten days. All growers are urged to apply this spray if clean apples are wanted.

Farmers Make Clear Profit.
That agriculture has again become a profitable industry is apparent from a study of cost and sale price of the principal crops on thousands of farms fairly well scattered through the country, which has been made by the department of agriculture. As the cost includes charges for the labor of the farmer and his family and interest on his investment, the profit shown is "net," without which the farmer and his family would have their living and a living wage. This situation came about in 1924 as a result of the rise in value of farm products, crops showing a loss in 1923 and 1922.

When a clear profit of 21 cents a bushel is made on wheat, 7 cents on corn, 5 cents on a pound on cotton, 7 cents a bushel on oats, the farmer has a margin to clear off debts and to make improvements. Naturally there was wide variation between different sections and different farms. Potatoes are an example, the profit in the southeast being \$63.95 an acre, while in the north central states it was only \$3.58 an acre.

Farm products have now reached the same price level as commodities in general. They may be held there if one-crop farming should be restricted to those areas where the far reported by the Oregon experiment station is dusting with sulfur.

Farm Pointers
Tilling to be satisfactory in heavy weather must handle half an inch an acre of rainfall every 24 hours. In unusual storm periods the O. A. C. experiment station field titles have run off as much as an inch an acre in one day.

Vegetables that are irrigated at the O. A. C. experiment station by running the water in furrows along the side of the plants are tomatoes, sweet corn, rhubarb, cucumbers, melons, beans, and squash, and such general crops as are grown with rather a wide distance between the rows.

Shothole borers attack only the trees that have been set back by injury enough to form a "Sour sap" condition. On boring into such a tree the insects prepare to feed their young grubs by planting in the tunnel a fungus that will grow only in sour sap conditions.

The beetles are attracted to trees in this condition, and attack them. So the first step in O. A. C. experiment station control is to find the cause of poor vitality in the tree, and to remove it as much as possible. Seriously infested trees should be cut out and burned.
