

Measured by Miles—

Or, "What Price Gasoline?"

The number of miles you get from your motor—the quality of its performance—the cost of its upkeep—all these are part of the price of gasoline.

That's why Union is the most economical gasoline on the market—because its quality is highest. Yet its price is never more than that of any good gasoline.

And Union Gasoline is non-detonating. Which means that its power-impulses are not hammer-like blows. They follow through!

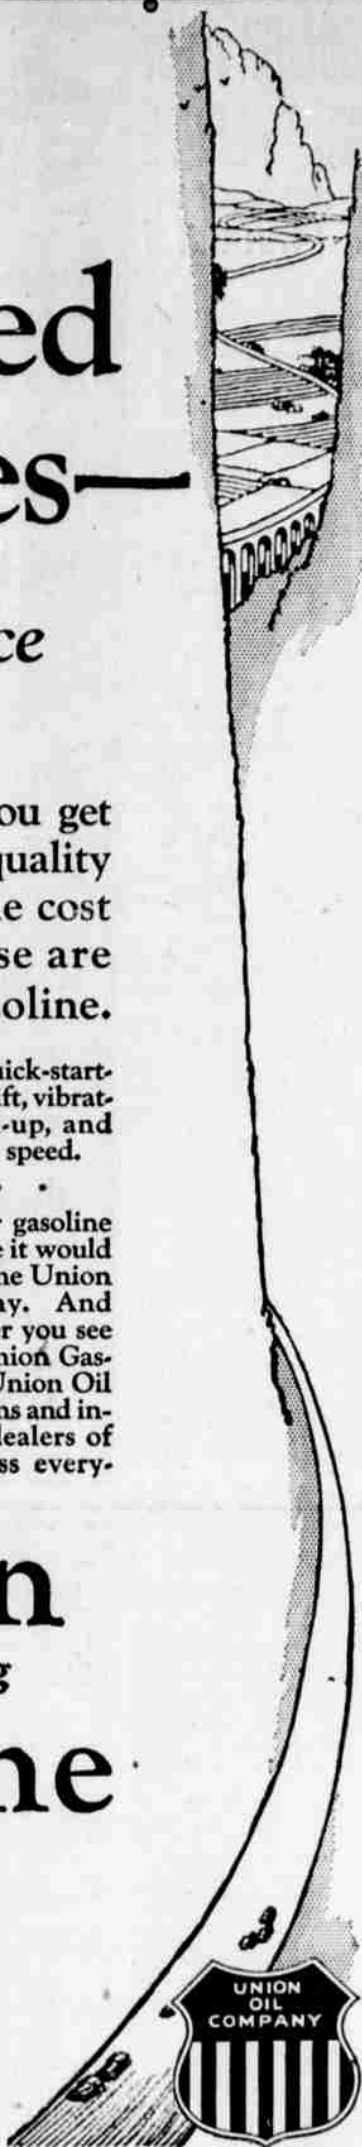

This means much to a motor. It means, for

one thing, quick-starting. Also, swift, vibrationless pick-up, and even, gliding speed.

If a better gasoline were possible it would be made by the Union Oil Company. And sold wherever you see the sign, "Union Gasoline." At Union Oil service stations and independent dealers of the first class everywhere.

MEN WITH WRECKED CAR STRANDED IN THE CITY; HAD BAD LUCK

Seven young men appeared in the sheriff's office today with a hard luck tale, and seeking advice and assistance. It appears that they started from Portland in a wreck of a car and with a small amount of money. Fifteen miles out of Portland the car broke down and one of the members of the party advanced enough for its repair. A few miles further it went down again, but they managed to drive to Roseburg in high gear, both the low and intermediate being stripped. Just outside the city the final blow fell, when a tire blew up and the seven were left stranded, without funds, and with their car broken down. In order to raise funds to continue they offered the machine for sale, but this afternoon were still seeking a buyer.

BLIND MAN BANDIT

(Associated Press Leased Wire.) STOCKTON, Cal., July 9.—While spectators were looking on from their porches across the street, Charles Rossiter, 78, nearly blind and armed with a toy cap pistol and with a blue bandana across his face, held up and robbed Wallace Homes, of 36 here last night. Rossiter was trailed by his victim, captured and turned over to the police. He was jailed on a charge of robbery.

WILL ROGERS MAY RUN FOR GOVERNOR OKLAHOMA CITY, Okla., July 9.—A reported movement to entice Will Rogers the cowboy-actor from the footlights along Broadway and make him a candidate for governor of Oklahoma next year was looked at askance by Oklahoma politicians "boom".

ADA BLACKJACK TO BE RETURNED SOON

(Associated Press Leased Wire.) SEATTLE, July 9.—The Alaska division of the United States Bureau of Education announced here today that Ada Blackjack would be returned to Nome, Alaska, on the bureau's steamer Boxer, leaving here about Monday. Ada came to the states after being rescued August 26, 1923, from Wrangell Island, in the Arctic ocean north of Siberia. She went there as seamstress with an expedition dispatched in 1921 by Vilhjalmur Stefansson, an Arctic explorer, working under the Canadian flag. Ada's companions in the expedition, Alan Crawford, Toronto; Lorne E. Knight, McMillanville, Ore.; and Milton Galle, New Braunfels, Texas, perished on the island. With Ada are going her two little children. She is returning to her mother and two sisters. Her husband, an Eskimo like herself, put her aside when she returned from Wrangell. He said: "she plays too much with the white men."

FACTS ABOUT THE GASOLINE YOU USE

"The man who drives up to a green and white pump and has ten or fifteen gallons of General gasoline pumped into the tank of his car, seldom stops to reflect just how far and in what ways that gasoline has traveled before it gets into the station of the independent dealer who supplies him," states C. D. Fies, distributor of General Petroleum Products.

"If we could follow it from the wells where it is produced, perhaps in the Taft, California, field, through miles of pipe line across mountains and over deserts to the refineries; thence through other pipe lines to the harbor, where it is pumped into the huge ocean-going tankers that transport it to the storage tanks at Portland; thence by rail to our distribution

TEMPERATURE 95.

At 3 o'clock this afternoon the mercury at the U. S. weather bureau station stood at 95 degrees, with indications that it would mount one or two degrees higher. With the wind to relieve the heat, it was keenly felt. Yesterday's temperature of 93 degrees was accompanied by the lightest wind movement of the month. The maximum velocity reached during the entire day was 8 miles per hour, while the average for the day was very low. Today's wind velocity was also quite light. Usually the breeze freshens to 10 or 15 miles per hour each afternoon. The hourly temperatures for today were as follows:

5 a. m.	57	10 a. m.	83
6 a. m.	58	11 a. m.	85
7 a. m.	73	12 noon	87
8 a. m.	73	1 p. m.	92
9 a. m.	77	2 p. m.	94
3 p. m.			95

tanks; thence by tank to the service station; and if he could see all the care with which it must be handled at every stage of its journey, he could realize better just what is necessary to bring his gasoline to him.

"The pipe line department of the General Petroleum Corporation has a mileage of over 400 miles in California, and last year handled over 25,000,000 barrels of oil. In pumping it over the mountains it is necessary to have stations which heat the oil in the winter so that it will flow more freely. Oil is routed and dispatched through the pipe lines in much the same manner that the trains are dispatched on the railroad.

"In this connection, a recent report showed that in connection with its pipe lines, the General Petroleum Corporation operates approximately 1,000 miles of telephone and telegraph wire, with 500 telephones and six telegraph offices. With the aid of these instruments and close observation of tank gauges, the operators and engineers are able to operate the pumps in synchronism, and the dispatcher is able to keep in touch with every barrel of oil in transit."

WILLIAM DOWNING DIES

(Associated Press Leased Wire.) SALEM, Ore., July 9.—William Henry Downing, 67, a life long resident of Marion county and former county judge and chairman of the democratic central committee of this county, died at his home near Shaw, 15 miles southeast of Salem at 4 o'clock this morning. Judge Downing was born on a farm in the Waldo hills near Sublimity, May 7, 1858, and has resided in Marion county with a few miles of the state of his birth ever since. He was stricken ill last November but was believed to have entirely recovered until he suffered a relapse about a month ago, which resulted in his death.

BORN

ROBERTS—To Mr. and Mrs. A. E. Roberts of Brockway, on Thursday, July 9, 1925, a son.

Visiting Friends—Phil Welschcker and Wm. Bowers, of Dunsmuir, Calif., are visiting with friends in this city. Both are members of Vance's Arizona Collegians, the popular dance orchestra, which was located in Roseburg for several months and which recently went to Dunsmuir.

BURNING AUTO SET FIRE TO FOREST IN THE TYEE DISTRICT

A new cause for forest fires was entered on the books of the Douglas County Fire Patrol yesterday, when the report was made on the small fire in the Tyee mountain district. It appears that a young man, P. H. Cole, was driving a small automobile along the road, when the car caught fire and was burned. The flames set fire to the grass along the road, which in turn set fire to an acre and a half of second growth fir timber. The owner of the car and his father had the forest fire extinguished by the time the patrol crew arrived. This is the first time, according to Warden Brown, that an automobile has ever set fire to a forest in Douglas County.

Another fire was reported in today, being located below Camas Valley on the Coquille river. The fire escaped from a slashing fire at Camp Number One of the Powers Logging Company. Although it is in Douglas County, it is being handled by the Coos County patrol under the cooperative agreement with the Douglas county organization.

ASTORIA MAY HAVE A POISON MYSTERY

The woman's vital organs will be analyzed for traces which her mother, Mrs. Mary Sjoblom of Astoria believes was administered to her with poisonous intent. Mrs. White was the wife of a Seattle lawyer. She was buried in Ocean View Cemetery September 1, 1923. She formerly lived with her mother in Astoria. In her petition to the court for a disinterment order Mrs. Sjoblom declares it to be her belief that following her daughter's death from poison, which she says was administered by an unknown person, the victim was shot through the dead.

ELECTRIC COOKING —less watching

The roast, for instance—first a quick searing to seal in the savory juices, and then a slow cooking heat as in a fireless cooker. That's in the oven.

But over here, something is simmering gently in a saucepan. Another pan is bubbling vigorously at the lid. Tomorrow morning's prunes are stewing leisurely between whiles.

Dinner is being prepared—and it must be watched, too. For each different dish requires a different method, a different heat. One fire will not do for all.

That's one reason why electric ranges, with their instantly regulated and easily controlled cooking temperatures, from a sizzling, searing heat in one place to a just-keep-it-alive glow in another, are so favored by good cooks. Electricity makes good cookery better, and easier.

And that, plus the surprising economy* of electrical cooking, is a reason why nearly one thousand eight hundred kitchens in the territory served by this company are now fuel-less and ash-less. Nearly one thousand eight hundred electric ranges have made them so.

Ask your nearest dealer to show you several models. Convenient payments, if you like.

THE CALIFORNIA OREGON POWER COMPANY

*The actual average cost of current for electric cooking and lighting, together, in homes in this neighborhood, is \$5.82 a month.

HEALTH BULLETIN

Who Watches For Water?

(State Board of Health.) In the country, each household is responsible for its own water supply. Almost every home has its own well, pump or spring. It is up to the householder to see that the water is pure, if it is contaminated, it rarely affects more than a few people.

Towns and cities supply water to hundreds or thousands of people. The home which gets city water-supply cannot itself look after the purity of the water, but must rely on the city to see that nothing harmful comes with it. One of the first duties of a city is to see that the water which it furnishes its citizens, is not dangerous.

There are three great water-borne diseases: typhoid, dysentery and cholera. In past ages, before attention was paid to the importance of clean water, recurring epidemics of these diseases decimated cities almost everywhere. Long before their infective nature was recognized, it was found that by providing pure water, the epidemics could be stopped, and that the diseases grew much less or even disappeared. The lesson was learned; but even now vigilance is the price of freedom from disease.

Two things must be done by every city providing water. The first is to pick its source so that, as far as possible, it shall be free from all likely contamination. This means that not only shall the water be pure as a usual thing, but that it must be controlled so that no filth can get into it. A few years ago there was a sharp outbreak of typhoid fever, in a town whose water was usually good. The water came from a brook which arose in the hills. It was found that during the winter a family living in the hills had had typhoid fever. Their wastes, which had been frozen on the ground through the cold weather (thus preserving the germs) were washed into the stream with the first spring rains. The epidemic of typhoid in town immediately followed. Here we had a source of water which was usually good, but could easily be contaminated, and was not thoroughly watched. If the water is not entirely pure and certain to remain so, the city must see that it is purified by filtration, chlorination, a combination of the two or some other approved method. Above all, the city must keep its water controlled by regular examinations so that any contamination will be shown before it has a chance to do much harm.

It is most important that city councils realize their responsibility in this matter. Most water supplies are not dangerous most of the time. When they are suspicious, however, the greatest vigilance is necessary. One unexpected contamination can cause an epidemic after years of safety.

What Does the Dry Chief Drink?

Here's the answer: TEA! Lincoln C. Andrews, assistant secretary of the treasury in charge of prohibition enforcement, is an ardent tea drinker and every day at teatime he must have one or two cups. In winter it's hot; in summer it's iced. He is seen sipping his tea as he works.

NOTICE TO WATER CONSUMERS
