The Iron Mongers

As New York See It

The mechanical changes in life at the last quarter century have left but small trace upon the games of New York youngsters. On the sidewalks one sees the old familiar bean bag, jacks, hopscotch, town ball, rope skipping, prisoner's base and "Amly-over." Even soap boxes with wooden wheels have not been entirely eliminated by the modern coaster. The singing calls of the games, too, have resisted change.

Subway excavations at Columbus Circle have necessitated raising a water main high in the air over Broadway, and the bus conductors at this point shout, "Low bridge. Keep your seats."

One scholarly looking conductor with horn rimmed spectacles coaches his warnings, in words which seldom fail to provoke the mirth of his passengers. "Overhead construction," he says, "Kindly remain seated."

The deluge of tea rooms rejoicing in bizarre names and sporting blue and canary yellow tables has resulted in a new occupation for at least one New Yorker. A sign in the Roaring Forties proclaims a "School of Tea Room Management."

Worried and wealthy theatrical managers of New York, who have spent years trying to get their audiences seated before the curtain rolls up, believe chronic late theater-goers are incurable.

Few seats are occupied ten minutes ahead of time and most persons come rushing in during the last few moments. Those coming in about the middle of the first act usually are couples and parties of friends that have lingered too long over coffee and conversation. Occasionally, notice is served late comers will not be shown to their seats until after the first act but it has little effect.

New Yorkers talk a lot about the "steaks" and its stage and vaudeville actors like to tell "Rube" jokes, but every week-end railway stations are jammed with thousands of persons going to the country.

The rush begins Friday afternoon and by the following afternoon and night is at its height. The long trek back home begins Sunday afternoon and usually is ended by Monday noon.

A newspaper columnist has been trying to discover the definition of a New Yorker. According to one Central Park policeman who stood desperately surveying the higher wooded hills and dunes of his domain, a New Yorker is a person who will carry a newspaper five miles to drop it in Central Park.

came in the visit of a Crown Prince.

Her Royal Highness, Louise of Sweden, finding the American theatres, like that of America, "charming," admitted that she missed the "ices and the lemon squashes" served during the entrance of the continental plays.

The "Occupational Therapy" exhibits of the American Psychiatric association give more than positive proof that art is not always quite sane. Made by the patients in mental hospitals, the rugs, mandibles, book ends, screens, desk sets and furniture exhibited showed a "stuntness" and skill in design and color not always found in the products of more rational guilds.

One enormous carpet, a black background with a poppy-like pattern in blues and greens, is known by the patients of the hospital on Ward's Island as "The Marie Curie Carpet," for permission to work on it is regarded as a sure sign of approaching parole or release.

UNITED STATES TIRES ARE GOOD TIRES

What is a Real Tire Test?

Questions and Answers that may be News to You—by a Tire Engineer of the United States Rubber Company

Question—With 20,000,000 cars running in America, does not the experience of users largely take the place of factory tests?
Answer—On the contrary. The very fact that motor transportation is so important in the life of every one imposes an additional obligation for searching tests on the tire manufacturer. The makers of United States Tires do not expect their customers to test their tires for them.

Question—What does the United States Rubber Company Factory Test include?
Answer—Everything from the Tree to the finished Tire. Raw materials are tested before they go into the tires, and the finished tires are tested in the Company's laboratories and on the Company's road test cars, trucks and buses. They are also watched in actual commercial service.

Question—What do these tests prove?
Answer—The material tests insure the quality of material used. The laboratory and road tests of complete tires "prove up" the correctness of manufacturing processes.

Question—What raw materials are tested?
Answer—Cotton cord, which furnishes the strength and flexibility of the tire; rubber, which binds the various parts of the tire together and forms the tread or wearing surface; compounding ingredients, which we mix with the rubber to give it the necessary qualities; and, steel wire, which is used in making the beads of the tire.

Question—What tests are made on the cord?
Answer—Cord going into the manufacture of U.S. Tires for United States Tires is tested for strength, stretch, size, twist, ply, length of staple, and freedom from imperfections.

Question—What tests are made on rubber?
Answer—Even though the quality and uniformity of Sprayed Rubber is controlled by the processes used on our plantations in the Far East, every shipment received at our factories is again tested for uniformity and also, after mixing with sulphur, it is tested for its rate of vulcanization, its tensile strength and stretch.

Question—What tests are made of compounding ingredients?
Answer—Compounding ingredients are tested to determine their purity and uniformity. They are practically all in powder form and even the degree of fineness to which they have been ground is tested.

Question—What tests are made on Steel Wire?
Answer—Steel wire is given a chemical analysis to determine whether it meets our specifications, and it is also tested for tensile strength and elongation.

Question—Are United States Tires tested alongside of other makes?
Answer—Yes. "These tests are conducted daily in our laboratories and on our road test vehicles.

Question—What is the object of these competitive tests?
Answer—To maintain the superiority of our design and construction.

Question—Does the fact that a large number of tires of a certain design and construction have given satisfactory service obviate the necessity for further tests on tires of the same kind?
Answer—No. Vehicle design and use, and road conditions are constantly changing. Tires that gave excellent satisfaction ten years ago are obsolete today in design and construction.

Question—How does the United States Rubber Company keep abreast of these constantly changing conditions?
Answer—It has a corps of factory trained technical experts in different sections of the country, continually checking the service our tires are rendering under actual operating conditions.

Question—Do all companies test their tires in this way?
Answer—Most all companies make tests of some sort. Very few, if any, carry them to the extent that they are carried by the United States Rubber Company.

AIRPLANE SPIN GIVES DERN WIN OVER JACK WOODS

Sailor Takes First Fall in Hard Bout, But Fails in Attempted Comeback After the 2nd.

Tra Dern, recent conqueror of Ted Thye, gave "Sailor Jack" Woods another dose of the "airplane spin" before a crowd of 250 at the Roseburg armory last night and it decisively ended one of the best wrestling bouts ever seen in the city. Woods, who had captured the preceding fall, made a game effort to resume the struggle for the third and deciding fall, but, despite an extra five minutes rest granted by Dern, he was too "goofy" to even keep his balance on the mat and Referee Glenn Smith, yielding to the urge of the spectators, halted the affair and raised Dern's arm as a signal of victory. The first fall was registered by Woods with a toe hold in 2 1/2 minutes, and the "egghead" producer of Dern's came in 1 1/2 minutes.

Woods was the aggressor in nearly all of the first period and twice forced Dern to crawl off the mat. Dern broke most of the Sailor's holds, however, by a few seconds of spinning his own body. His tactics were clean throughout, while Woods at times was unduly rough and more than once Referee Smith had difficulty making him "break" when the men were off the mat. Woods' chance for taking the first fall was presented to him when Dern, stooping over, reached between his own legs and grabbed one of Woods', putting him on his back. In this position Woods shot out his other leg with terrific force, sending Dern off the mat on his face and partially stunning him. Quickly following up this advantage, Woods jerked Dern back on the edge of the mat and clamped a toe hold on him. Dern patted the floor as a concession of defeat, but Referee Smith had to slap Woods on the back for several seconds before he would let go.

The second period was all Dern's. Taking the aggressive right from the start, Dern, after once furling Woods, for the first time during the bout, to crawl off the mat, raised the Sailor off his feet, spun him around several times and then slammed him on his back. This was "good night" for Woods. After lying helpless for several seconds, Woods began battling with an imaginary foe and had to be helped to his corner, then to the dressing room. At the end of fifteen minutes, when he was still so badly dazed that he was advised to call it a day and quit. Stubbornly refusing, he walked groggily back to the mat and made a pitiful effort to carry on. After making two futile clutching at Dern and falling forward on his face, his condition became apparent to the crowd, who called on the referee to stop the affair and Smith at once complied.

In the second preliminary Herman Muetzel easily took two falls in less than five minutes from Jack Ford. A young brother of Ford lost the first preliminary in one fall to another lad named Hoffman.

McNARY WORKING ON FARM PRODUCE PRICE MEASURES

"Better prices for farm products is more important than more credit," Senator McNary states in a telegram to Foster Putner, the message being received today. Mr. Putner, manager of the Umpqua Broccoli Exchange, recently wired Senator McNary, making the statement that the administration's policy of granting further loans to farmers would only make the situation worse and that the real benefit could be provided by action either in increasing the prices on farm produce or lowering transportation rates. Efforts have been made along the line suggested by Mr. Putner, Senator McNary says.
