OCEAN AND LAKE EACH TAKE LIFE

(Associated Press Leased Wire)

TWIN ROCKS, Ore., Aug. 22.—Lawrence Anderson, 27, Portland carpenter, was drowned yesterday when he was swept out in the surf while bathing. His uncle, W. R. Buhler, of Portland, made a futile effort to rescue him.

PORTLAND, Ore., Aug. 22.—Dale Lionberger, 17, was drowned yesterday at Blue Lake when he sank suddenly while attempting to swim to a float. Efforts of life savers to find the body were unavailing for 20 minutes. When the boy was found a pulmotor was used, but he could not be resuscitated.

Try Watkins' whole mixed spices for pickling. Phone 177. 120 W. Lane St.

PORTLAND MAN IS KILLED BY AUTOIST

(Associated Press Leased Wire)

PORTLAND, Ore., Aug. 22.—Struck by an auto while walking across the west approach of the Burnside bridge Saturday night, Fred E. Day, 68, a watchman for the Oregon, Washington Railroad and Navigation company, was killed. His body was identified Sunday when his wife reported to the police that he was missing.

Eat barbecue sandwiches and live forever. Brand's Road Stand.

TEN DAYS FREE TRIAL

We will deliver for your approval our famous "Moor-Rest" double deck bedspring and let you use it for ten days without charge. How To Build An Airplane That Should Fly At The Least a Minute

EDITOR'S NOTE: This is the fifth article in a series telling the boys of Roseburg how to make airplanes. Previous articles told how to make a glider and the various fittings of the model, including the propeller. Reference to these articles is necessary, as we now tell you how to build a real flying plane. The information in these articles is furnished by the Playground and Recreation Association of America.

Now to build a real airplane. One that will fly for at least a minute and sometimes as long as three minutes, if you follow the directions carefully. This is a tractor model, one which is pulled through the air by the force of its propeller.

The following materials are necessary:

One piece pine of balsa 15 inches by 4 inch by 3/32 inch.

Two pieces of pine or balsa wood 16 inches by 1-8 inch square.

One propeller blank 10 inches by 1-8 inches by 1-16 inch.

Five pieces of bamboo 3 inches by 1-32 inch by 1-64 inch.

One piece of bamboo 5 inches by 1-8 inch by 1-16 inch.

One piece of bamboo 13 inches by 1-32 inch square.

One piece of bamboo 6 inches by 1-32 inch by 1-64 inch.

One sheet of Japanese tissue paper 20 by 12 inches.

One propeller nail bearing.

One propeller shaft and two washers.

The rudder is made from the long piece of bamboo. Hold the section to be bent over a candle flame and when the wood becomes heated it can be formed into the shape shown in the drawing. It will be noticed that the base of the rudder is extended beyond the upright portion and bound to the motor stick under the rear hook.

Ambroid or glue should be used in all of the wrappings and joints. When using ambroid, coat each of the pieces to be joined and let them dry. Then apply a second coat, allowing the ambroid to set.

To cover the rudder, give the frame a coat of banana oil and lay a piece of Japanese tissue paper over the frame. Press the

paper against the frame so that it will adhere, and when it is dry trim off the excess paper with a razor blade.

The horizontal stabilizer is made by ambroiding the six-inch length of bamboo to the under side of the motor stick one inch from the rear. The center of a piece of silk thread a foot and a half long is tied to the base of the rudder at a point one inch from the end of the motor stick. The two ends are then carried around opposite ends of the bamboo tail piece and fastened to the motor stick three inches in front of the other quibble raised, necessitating a bamboo piece. A touch of ambroid should be given where the thread passes the bamboo stick and where it is tied. When this tail frame has set, it should be covered on the under side with a piece of Japanese tissue paper in a similar manner to that employed for the rudder.

To form the wing, the two 16-inch pieces of wood are given a slanting cut in the center and rejoined as shown in the detail view, thus forming a slight upward angle. The three-inch lengths of bamboo, which are to be the ribs, are slightly heated and curved, as shown in the end view. The end of each rib is then split for a short distance and fastened to the front and rear wing edges. Ambroid or glue should be employed in this joint.

When this ladder-like frame is completed, the unused pieces of

bamboo remaining should be bent into a semi-circle of three-inch diameter and carefully split in half, making two ends of the same shape. These should be ambroided in each end of the wing frame. Before covering the wing frame, two piano wire wing clips are made to the shape shown in the detail drawing near the assembled view. The center section of these wing clips should be of such size that it will grip the motor stick firmly. In the clip at the right in the drawing the distance between the bottom of the stick portion and the bottom of the two legs should be 7-16 inches. The wing clip at the left is bound and ambroided to the front spar of the wing and the right-hand clip is similarly fastened to the rear spar in the center.

The wing can now be covered with tissue paper. The section of paper between the two wing clips can be cut to fit, but the rest of the paper can be left overlaid and trimmed after the banana oil has set.

Make Shaft of Wire

The tractor propeller is carved as described in a previous article. The propeller shaft is made from piano wire and two washers are used on the shaft between the bearing and the propeller to cut down the friction. The length of rubber thread is tied in a loop, using a square knot, and strung on the model between the two hooks and through the two rubber guides.

To assemble the model, the wing should be fastened on the under side of the motor stick by placing the stick in the two clips. Because the rear clip is higher than the front one, the wing is placed at the angle which is necessary for proper lift.

To fly the model, wind the propeller in the opposite direction to that intended for flight, turning it several hundred times until the rubber thread is tightly twisted. To launch, hold the propeller with one hand and the model in the center with the other hand, and cast it gently forward. If the motor climbs too steeply, the wing should be set back or adjusted to have a less angle of inclination. If it noses down, the wing can be set forward or inclined steeper.

Tomorrow: How to build a twin-motored plane.

NOTICE TO CONTRACTORS

Sealed bids will be received by the Board of Directors of School District No. 21 of Douglas County, Oregon, at school building at Canas Valley, Oregon, on September 1, 1927, at seven o'clock p. m. for the construction of a new school building for said School District No. 21, according to plans and specifications prepared by P. Manion, White, architect, Sherlock Building, Portland, Oregon.

Bids to cover all labor and material for the general work of the building separately from plumbing and heating, and plumbing and heating to be included in separate bids.

No bid will be considered unless accompanied by cash, or bidder's bond or certified check in favor of George H. Trueman, chairman, for an amount equal to at least ten per cent of the amount bid, said sum to be forfeited in case of failure to enter into contract and sufficient bond on the part of any bidder whose bid is accepted. The successful bidder will be required to furnish an approved surety company bond in the amount of fifty per cent of the contract price, to insure faithful performance of the work and payment for all labor and material, said bond to cover details mentioned in the specifications.

Plans and specifications may be obtained at the office of L. W. Metzger, Roseburg, Oregon, or Mrs. C. J. Bierg's residence, Route 2, Roseburg, Oregon (Riverdale).

A deposit of Five (\$5.00) dollars will be required of each bidder to insure proper return of drawings and specifications.

The right is reserved to reject any or all bids.

By order of the school board of School Dist. No. 21.

MRS. C. J. BIERG, Clerk of said District.

NOTICE TO CONTRACTORS

Sealed bids will be received by the Board of Directors of School District No. 123 at the school building at Riverdale, Oregon, on August 27, 1927, at seven o'clock p. m. for the construction of a new school building for said school District No. 123 according to plans and specifications.

Bids to cover all labor and material for the general work of the building separately from plumbing and heating, and plumbing and heating to be included in separate bids.

No bid will be considered unless accompanied by cash, or bidder's bond or certified check in favor of J. P. Bonebrake, chairman, for an amount equal to at least ten per cent of the amount bid, said sum to be forfeited in case of failure to enter into contract and sufficient bond on the part of any bidder whose bid is accepted. The successful bidder will be required to furnish an approved surety company bond in the amount of fifty per cent of the contract price, to insure faithful performance of the work and payment for all labor and material, said bond to cover details mentioned in the specifications.

Plans and specifications may be obtained at the office of L. W. Metzger, Roseburg, Oregon, or Mrs. C. J. Bierg's residence, Route 2, Roseburg, Oregon (Riverdale).

A deposit of Five (\$5.00) dollars will be required of each bidder to insure proper return of drawings and specifications.

The right is reserved to reject any or all bids.

By order of the school board of School Dist. No. 123.

MRS. C. J. BIERG, Clerk of said District.
