NEA Service.
WAXAHACHIE, Tex., Jan. 20.—Take a lovers' quarrel in which the young man leaves home, vowing he'll never return—Send him into Mexico, put him in front of a firing squad and have him escape death at the last minute—Bring him back home years later, have him gain fame and fortune as an artist—And then, after 40 years have passed, have him meet his old-time sweetheart and marry her—And you have all of the ingredients for a pretty fine story.

A Wandering Artist
In this case the story happens to be true. It's the story of D. Frank Brown, artist and soldier of fortune, and Irene Rives, the sweetheart he found after 40 years of wandering.

Back in the '80s Brown and Miss Rives were sweethearts in the town of Florence, Tex. They planned to get married when they had finished high school, but the girl's parents objected, the two quarreled, and Brown left in a huff.

He wandered into Mexico and spent 15 years there, painting the beauties of Mexico's mountains

and towns. He went on into Central America, the West Indies, South America, and then returned to Mexico.

During the turmoil that followed the fall of Porfirio Diaz, Brown nearly lost his life. Twice he was seized by the Zapata band and condemned to be shot. On each occasion he escaped, the last time with a reward of 3000 pesos on his head.

He had accumulated a fair-sized fortune during his wanderings, but the bulk of it was lost in the hurry-burly of Mexico's revolutions. Brown at length concluded that Mexico was too troublous a country, so he returned to the United States and became a teacher of art at an eastern university.

During all of this time Brown and his former sweetheart had not heard of one another. Each had married once, but Brown's wife had died during his Mexican adventures, while Miss Rives' husband died in 1919. And the two former lovers often thought of one another.

So, last summer, Brown acted on impulse and wrote to the town of Florence to see if Irene were still alive.

Very quickly he got an answer. More letters were exchanged—and then Brown packed up and came to Texas.

Waiting for Him
Irene Rives met him at the dock at Galveston. The two had not seen one another for 40 years. A matronly woman and a grey-haired man, well on in middle age, had taken the place of the two youths who had been sweethearts so long ago.

But true love, as the story books say, can laugh at the passing of years. And Irene Rives and Frank Brown were married shortly after their reunion.

The two came to Waxahachie. Townspeople who had heard of their romance met them at the station and gave them an old-time charivari. Brown, beaming with happiness, presented the city with a number of valuable paintings and announced he would make his home here.

Any day after the work is done, Brown and his wife may be seen strolling down the city's streets, hand in hand. Their youth was spent years ago. But they don't seem to care.

SOMETHING ABOUT RELATIVE VALUES OF FOODS NEEDED

Food materials vary greatly in the amount of protein, fat and carbohydrates which they contain. Some have only one kind of fuel, others two, and some all three, and these in varying proportions. The fuel value of a food material is, then, the amount of energy it is capable of yielding in the body.

The calorie is the standard unit of measurement used in ascertaining the energy or fuel value of different food materials. One calorie represents the amount of heat needed to raise one pound of water four degrees Fahrenheit.

To take care of the internal work of the body, breathing, digestion, muscular activity and for the multiple work of the cells each hour during the twenty-four, we must have a certain number of calories as our basic requirement. Age, size, occupation and sex all affect the total quantity of food needed, as well as the relative amounts of each kind of food material.

For example, a man weighing about 150 pounds, doing active muscular work, needs approximately 3400 calories each day. He requires 60 calories an hour throughout the entire twenty-four for the internal work of his body. To take care of his eight hours' active labor, he needs 180 calories an hour more. For each of three hours of light activity, he needs 110 more calories per hour, and for five hours sitting at rest, 40 calories per hour. This gives his

Merger Head?

Reports have been current in automobile circles that Edward Ver Linden, who resigned recently as president of Peerless Motor Company of Cleveland, would become head of a great automobile merger engineered by W. C. Durant.

total daily caloric requirement of 3410.

Boys and girls in their teens need as much food as grown people, and in some cases more.

This is because they have not completed their growth and are unusually active. Children from two to twelve years must be given surprisingly large amounts of food, as compared to grown persons.

There is a widespread misunderstanding as to the caloric content of staple foods. Perhaps no more striking instance exists of this than in the case of crackers and

cookies. In the past they have been considered all too generally as merely adjuncts to the meal.

Yet few foods possess as high energy-yielding values as the products of the cookie and cracker factory. Though dainty in structure, delicate in flavor and attractive in appearance, biscuits and crackers are still relatively inexpensive sources of energy, comparing favorably with our common sources of food supply.

For the purpose of comparison, the fuel values of several biscuit and cracker products and of other typical foods are given in the following table. The values represent calories per pound of food.

Cheese Cracker	2100
Sugar Cookies	2040
Vanilla Wafer	2020
Sandwich Piece	1970
Graham Cracker	1955
Soda Cracker	1925
Ginger Snap	1895
Cream Cheese	1885
Fig Bar	1690
White Bread	1180
Whole Wheat Bread	1110
Ice Cream	833
Beef Steak, raw	745
Salmon, canned	600
Potatoes, raw	385
Whole Milk	315

SOLONS A JEALOUS LOT

By NEA SERVICE
WASHINGTON.—Our worthy solons in Congress are a jealous lot. Take for instance the other day when Congressman Eaton of New Jersey became so unkind of the dignity in the House of Representatives that he referred to the Senate as "the higher body." Came a chorus of protests and the record was revised to "the lower body."

NOT THE FIRST

She: How dare you! Papa said he would kill the first man who kissed me.
He: How interesting. And did he?

Along Flew Ruth

An airplane for sport, a horse for exercise! That's the formula of Ruth Nichols, society girl of Rye, N. Y., who made a non-stop flight from New York to Miami the other day. Here's the smile she brought home from the aerial journey.

A dictionary of occupational terms printed by Great Britain lists 16,837 ways of making a living.

TELEPHONE LINE TO CONTINENTAL EUROPE IS OPENED

Long distance telephone service from the United States and Cuba will be extended to continental Europe Thursday morning, January 19th, with the opening of service to Brussels and Antwerp in Belgium, according to Mr. Farrington, manager of The Pacific Telephone and Telegraphic Company at Roseburg, Belgium, thus becomes the first continental nation to be brought within speaking distance of the average American home.

Connection will be made via London, using the Trans-Atlantic radio-telephone link which has been in service for the past year. Extensions to other European cities of importance are contemplated in the near future. It is stated, Trans-Atlantic telephone service to Belgium points will be in operation from 7:30 a. m. to 6 p. m. Eastern Standard time, the same period as that now in use for London. The rate for Belgium will be \$3.00 higher for three minutes and \$1.00 higher for each succeeding minute than the present rates from the United States and Cuba to London. Thus a New York-Brussels or a New York-Antwerp call will cost \$78.00 for the first three minutes and \$26.00 for each minute thereafter. This will make the charge for calls from the Pacific coast points \$90.00 for the first three minutes of conversation and \$30.00 for each additional minute of conversation, according to Mr. Farrington. Calls will be handled in the order of their filing. The method of placing a call is the same as that for any other long distance point.

The longest prize fight in history lasted for 276 rounds. It was between Jack Jones and Patsy Tunney at Cheshire, England, in 1825.
