MISCELLANEOUS

CAR OWNER—Don't forget to call 553 when in need of auto parts. Sarff's Auto Wrecking House.

ONE FARMER WANTED from producer. Twenty pounds of Thompson Seedless for \$1.25, delivered to any address in Douglas or adjoining Co. Satisfaction guaranteed or money refunded. J. A. Cobb, P. O. Box 413, Red Bluff, Cal.

WOMEN, WOMEN! THIS MUST STOP!

By NEA Service

PARIS—Ever since Eve coaxed Adam into eating the forbidden apple, women have so added much to the world's happiness by a constant source of masculine downfall.

Modernizing that, it is found even at present, man is rabidly a kick against this distraction to his earthly mind by the fair sex.

Recently, an international conference of male university students was organized here to devise a means of forcing female students to separate class rooms.

Say the men: "They annoy us in our work. In the law schools, their bobbed hair, rouged lips and cheeks, and even blackened eyebrows and lashes strike a note entirely out of harmony with the traditional solemnity of the French judicial system."

The odor of perfume, the students say, detracts their attention from their work and "even the professors sniff in ill-disguised repugnance."

ON THE BOYS—

"There seems to be more girls here than boys."

"Yeah, the potting is two to one."—Life.

Automobile Insurance

Your car is not fully equipped unless it is insured. Fire and theft insurance are not the only essential coverages. You should be protected with Public Liability, Property Damage and Collision Insurance. Protect your self from serious loss by insuring today. We will gladly explain these different forms of insurance. Call or phone.

SOIL SURVEY IS FOUNDATION OF FARM PROGRAM

The practical importance of the soil surveys and maps of the United States department of agriculture as a guide to farm practice and a means to increased crop production in the great farming regions of the United States was impressively revealed at the annual meeting of the Soil Survey Association which recently closed its two-day session in Washington with addresses by Dr. A. F. Woods, director of scientific work of the United States department of agriculture, Dr. Henry G. Knight, chief of the bureau of chemistry and soils, and Dr. A. G. McCall, chief of soil investigation of that bureau.

"The soil survey lies at the foundation of our whole program of agriculture. We can not solve our problem until we have a sound and classification. The soil survey is the most important of all the agricultural work that is going forward because the agricultural problem today can be solved only by getting facts and applying them to the present situation," said Doctor Woods.

Doctor Knight said that America today has the best soil survey organization in the world. "Your work is fundamental and comes first if we hope to work out a satisfactory agricultural program," he told the soil scientists.

"It is doubtful if there is any other line of public work of such great economic value that can be done at so low a cost to the taxpayer as the soil survey," Doctor McCall told the soil scientists and pointed out that the \$90,000,000 acres of agricultural lands so far mapped and surveyed in the United States have cost only a fraction over two cents an acre, including both federal and state expenses to date.

The tremendous practical value of the soil survey is securing a definite accounting of the assets and liabilities of soil types in any agricultural region was emphasized by Dr. J. H. Stallins, agronomist for 120,000 acres of land contained in the Penny-Gwinn farm of Florida.

By using the method of the government's soil survey and making a detailed map of its soils in the entire area of that farm, Doctor Stallins has clearly proved which crops are best adapted to each soil and has substituted definite scientific knowledge for the costly guess work and hit-or-miss methods of the average farmer.

This soil survey work has proved that one Florida soil, which produces the largest crops of potatoes is utterly useless for grapes and pecan trees; that other soil which is poorly adapted to Irish

potatoes will grow bumper crops of sweet potatoes; that frequently where two soils meet in the same field there will be a highly successful crop of corn on the one and a total crop failure on the other.

What has been done in detail on this one large farm of Florida has been accomplished in a more general way for the farms of a thousand counties of the United States according to the statements of the soil scientists, agronomists, surveyors and directors of state experiment stations who discussed their work in this phase of the government's agricultural program.

In addition to the great economic benefits to be gained from the use of the soil survey by increasing numbers of farmers as a guide to the selection of soils and the adaptation of the proper land to the right crop, the soil surveyors say that this work of the government has revealed erosion as the greatest solution by establishing the characteristics and location of those soils peculiarly liable to loss from rainwash and gullying.

The greatest loss to soil fertility in the United States is not from poor methods of cultivation but from soil erosion, Hugh H. Bennett, specialist in erosion and field inspector of the bureau of chemistry and soils, told the meeting of soil scientists. He said, there is 21 times the annual loss of plant food from rainwash as from cropping. He pointed out practical means of preventing erosion, particularly the practice of terracing which has been successfully applied to 49,000 acres of land in Texas during the past year.

Dr. C. F. Marbut, chief of the soil survey, United States department of agriculture, told the soil scientists and surveyors who gathered at this week's session of the Soil Survey association that they are creating a new science of America's most important resource, the fertility of the soil.

Old Nick Carter has flown off the handle again. He is selling Lee heavy duty six-ply balloon tires at greatly reduced prices.

NO-FIRE IN HEADREDS?

A scientific pronouncement which may start lively arguments comes from a report of the British social hygiene council. This indicates a belief that redheads, instead of being animal fighters and fiery adventurers, are really victims of an inborn inferiority complex.

It is an interesting theory. If difficult to prove, it has for its foundation, says Popular Science Monthly, the idea that redheads as children are so teased that they are forced into being vigorously on the offensive-defensive until it becomes a habit. Schoolroom jeers often have a lasting effect on the lives of people. It is related of Napoleon that he first determined to be a soldier when a schoolmate teased him about his small stature, saying that there wasn't enough of him to make a soldier.

FALL'S LEASE TO STANDARD OIL SET ASIDE BY COURT

(Associated Press Special Wire)

WASHINGTON, Jan. 2.—The government succeeded in the supreme court today in its effort to recover from the Standard Oil company valuable oil lands in the Elk Hills naval oil reserve in California.

In its decision the court set aside one more act of Albert H. Fall as secretary of the interior. It had been contended that Fall did not determine whether the land was known to be mineral land in 1903, when the matter was brought to his attention.

When the question was before Fall the government charged he gave it no opportunity to present testimony or to be heard in opposition to the position taken by the company.

Other Decisions

The supreme court held today that the decision of the director of the veterans' bureau is final and conclusive in matters relating to the payment of soldiers' bonuses or adjusted compensation.

Manufacturers who make price and other discriminations among customers are subject to prosecution under the Clayton anti-trust act.

The supreme court made the ruling today in a case brought from Indiana by the George Van Camp & Sons company against the American Cans company.

The Tennessee law fixing the wholesale and retail prices on gasoline was declared invalid and unconstitutional today by the supreme court.

American fence is zinc insulated, a process by which 99 to 100 per cent more galvanizing is put on the wires. It is guaranteed to resist rust. It is sold at Wharton Bros.

LIFE INSURANCE POLICY SUBJECT TO U. S. TAXES

(Associated Press Special Wire)

WASHINGTON, Jan. 2.—In a case regarded as of great importance in the insurance world, the supreme court ruled today that money obtained from life insurance policies becomes a part of the estate subject to federal taxes when the deceased had retained the right to change the beneficiary at any time.

The case started by the Chase National bank of New York and involved taxes paid the government on approximately \$200,000 in insurance carried by Herbert W. Brown, who died in 1924.

Brown left an estate of \$524,000 not including the policies.

After allowing certain deductions, including \$50,000 of the pol-

Check at first sneeze. Rub on—inhalant vapors. Over 21 Million Sold Last Year.

When the government levied taxes on the remainder. The taxes were paid under protest and suit was brought to recover money which had been paid on the insurance.

"MOTHER MACHREE" DEAD

NEW YORK, Jan. 2.—Mrs. Nannie Hall, the original "Mother Machree" of her son's famous song by that name, died last night at her home in Beechurst, Long Island. She was 71 years old.

The son, Ernest R. Hall, died in May, 1927. He was the composer of many popular ballads. The body of Mrs. Hall will be taken to Cleveland for burial alongside that of her son.

MAD AGAIN!

929 fence, full weight and gauge; copper bearing, zinc galvanized, 33c per rod. Barb wire \$2.95 roll. Good cedar posts 13c each.

Stearns & Chenoweth.

ADAMSON RAILROAD LAW AUTHOR SERIOUSLY ILL

NEW YORK, Jan. 2.—Former Congressman William C. Adamson of Georgia, who sponsored the railroad act named for him, was reported "very low" from an attack of pneumonia at the Presbyterian hospital today.

Judge Adamson, who is nearly 75 years old, entered the hospital in a weakened condition last week. Members of his family came to New York to be near him.

Here's the Way to Heal Rupture

A Marvelous Self-Home-Treatment That Anyone Can Use on Any Rupture, Large or Small

COSTS NOTHING TO TRY

There is no longer any doubt but what the plan was to completely heal rupture without any operation.

If you are ruptured, no matter how bad or how long, send your name and address to Capt. W. A. Collings, Inc., 975H Collings Bldg., Watertown, N. Y., and try free the wonderful invention that healed him of the worst two ruptures ever heard of. He threw away his truss; never had to wear it again.

His two large ruptures, that had kept him bedridden for years, were both held naturally by his own muscles without support of any kind. It was a marvelous cure of rupture, and you can have a free trial of his wonderful home treatment by merely sending name and address, no charge whatever. Don't fail to send for this free test. It is certainly wonderful.

PLANT CITY, Fla. — Winter strawberries—the nation's most expensive table luxury—are streaming into market from hundreds of patches unknown to any agricultural census but always ready with their annual supply of "cash money" fruit.

Optimists estimate an assured harvest of 5,000,000 quarts, 500,000 quarts more than were picked in the record season of 1924-25. A long, dreary drizzle did the work. It broke up a drought that for several weeks kept producers extremely uneasy, and by supplying moisture necessary to bring the fruit out for the holiday trade gives rise to the prospect that growers in this community will add more than \$1,000,000 to their bank accounts.

First shipments to the north brought from \$2 to \$2.25 a quart. Later, 1,000 quarts were sold at \$1.25 a quart. At the end of the first week of sales the daily average was better than 1,500 quarts at 91 cents. Sales are expected to reach 5,000 quarts a day around the first of the year. The shipments will continue through March, but as the season progresses prices are expected to drop.

Plant City makes the first shipments of winter strawberries, and by being the earliest on the market gets the highest prices. Northern Florida follows, and then Louisiana, Tennessee, Mississippi, North Carolina, Illinois, Delaware, and New Jersey market their crops.

Farmers have found the strawberry an excellent mid-winter crop to be grown when their land other-

Winter Strawberry Crop Puts Welcome Cash in South's Pocket

PLANT CITY, Fla. — Winter strawberries—the nation's most expensive table luxury—are streaming into market from hundreds of patches unknown to any agricultural census but always ready with their annual supply of "cash money" fruit.

Optimists estimate an assured harvest of 5,000,000 quarts, 500,000 quarts more than were picked in the record season of 1924-25. A long, dreary drizzle did the work. It broke up a drought that for several weeks kept producers extremely uneasy, and by supplying moisture necessary to bring the fruit out for the holiday trade gives rise to the prospect that growers in this community will add more than \$1,000,000 to their bank accounts.

First shipments to the north brought from \$2 to \$2.25 a quart. Later, 1,000 quarts were sold at \$1.25 a quart. At the end of the first week of sales the daily average was better than 1,500 quarts at 91 cents. Sales are expected to reach 5,000 quarts a day around the first of the year. The shipments will continue through March, but as the season progresses prices are expected to drop.

Plant City makes the first shipments of winter strawberries, and by being the earliest on the market gets the highest prices. Northern Florida follows, and then Louisiana, Tennessee, Mississippi, North Carolina, Illinois, Delaware, and New Jersey market their crops.

Farmers have found the strawberry an excellent mid-winter crop to be grown when their land other-

wine would be idle. In many sections it has become the "cash crop." Here, the yield usually is from 2,500 to 3,000 quarts to the acre and worth from \$750 to \$1,000 to the grower.

Unlike most farmers, the strawberry grower does not have to wait for his money. He drives into town with the day's harvest and when he goes home, his money is in his pocket. Growers finance themselves, in part with money from other crops but largely from proceeds as their sales are made.

This little town is a busy place during the market season. There is a modern auction yard with all the facilities of any produce market. When the yard is filled the gates are shut and buyers pass among the wagons. Inspect the crates, and make offers. Bids are raised back and forth. If the price does not suit the producer, he can drive out, rent a refrigerator and take his chances on a higher figure.

Usually, he takes the highest bid. He must decide within a half hour whether he will sell, for there are other wagons waiting their turn at the gate. Most growers are known to the buyer by the way they pack their boxes. seldom does a buyer "dump" a box of berries to see if the small ones are at the bottom—but he may if he chooses for it is his unwritten right. A few growers take enough pride in their produce to place their name on their boxes. Culls are so scarce that a culling and preserving plant established here some time ago was forced out of business.

BOOTS AND HER BUDDIES

JIMMY—WHAT DID YOU HIT WITH THAT EYE?

SAY, BOOTS—NOT NEWS! I'VE MADE THE BOILING TEAM OVER AT SCHOOL—PRETTY SWELL, EN?

YEA, THAT'S GREAT! WHOOP-EE!!

WELL, I THOUGHT IF I COULDN'T INTEREST YOU IN ONE KIND OF A RING, I MIGHT IN ANOTHER—SAY, YOU DON'T SEEM VERY KEEN ABOUT IT
