Mrs. Templeton is also visiting with Commandant and Mrs. Starmer.

From Washington, D. C.—S. S. Bone and Edward M. Haight of Washington, D. C., landed here late yesterday afternoon by plane and left this morning for Medford. Bogen is in charge of the Aerial Survey department of lighthouses and last year made a survey between Redding and Roseburg for beacons. At the present time he is going over the survey made.

Have Curious Accident—When driving into town Friday morning from the North Umpqua, just as they crossed the railroad tracks in Edenbow, a crash followed by a handful of glass fragments startled Mr. and Mrs. Gilbert Wood, and a hasty examination showed that some missile had penetrated the wind shield, leaving a hole as large as a fifty cent piece. Whether it was a small stone or perhaps a spent bullet from some hunters gun, is still a mystery.

Visits Today—William Voorhies of Lookingglass is a business visitor in this city today.

Home From Visit—Mr. and Mrs. Paul DeRoss are at home in this city after a visit with Mr. and Mrs. W. O. Cockeram at Driver Valley.

To Attend Meeting—W. O. Cockeram and A. W. Cockeram of Driver Valley left today for Portland to attend a meeting of the Wood Growers' association in the metropolis.

Truck Driver Fined—A fine of \$29 and costs was imposed by Judge Hopkins this morning on William Worth, a truck driver who pled guilty to passing a car on a curve.

AGED MATRON DIES AT SOLDIERS HOME; INTERMENT SUNDAY

Catherine Davis Grout passed away at the Soldiers Home hospital last evening. She was born May 28, 1839, at Ingersoll, Canada and was 90 years of age. She was married to U. S. Grout at Port Huron, Michigan, October 26, 1862. Mr. Grout passed away May 8, 1928. Funeral services will be held at the Roseburg Undertaking company chapel Sunday afternoon at 2 o'clock. Rev. Achter will officiate. Interment will be at the Soldiers Home cemetery beside the body of Mr. Grout.

SENATE GROUP GRILLS M'NARY ON DEBENTURE

house would not agree to have a vote on the debenture and reiterated he felt to resist further probably would favor the measure.

Money Available—Though the farm bill approaching passage in congress calls for a huge sum of money, \$50,000,000, the treasury is ready to take care of the expenditure should it be decided to make the appropriation available at once.

WISCONSIN DRYS PLAN MORE STRINGENT LAW

WASHINGTON, June 8.—Senator Nye, republican, North Dakota, served notice in the senate today that he would "stay here all summer if necessary" to obtain a vote on his measure proposing repeal of the national origins clause of the immigration act.

FARM REMINDERS

It is best to watch for abnormal conditions in the brood every time a colony of bees is opened, says the Oregon experiment station. If the brood shows evidence of being discolored by turning yellow or brown, a sample of the diseased comb without honey may be sent to the state college for examination.

Prune leaf-spot is treated with bordeaux spray in the same way as for cherry leaf-spot. The last spray for this disease goes on about the last of June. The same spray will help to check brown rot.

A shade board or double tele-scope is necessary for bees during the summer months, says the experiment station. A board may be laid up against the hive on the sunny side. The hives need the early morning and late afternoon sun, and having the bees under large trees or in a shed gives too much shade.

Experienced growers of clover seed usually pasture back or clip the crop early, says the Oregon experiment station. Reasons for this are the bloom will be delayed to miss the invasion of midges; there will be more moisture left in the soil for the development of the second crop; it reduces weeds, and there are more insects for red clover pollination.

All-Talking Mystery Picture At Antlers Sunday and Monday

A Scene from the Paramount All-Talking Picture "The Hole in the Wall," with Claudette Colbert and Edward G. Robinson

Claudette Colbert, Robinson, Newell, Meek are heard in "The Hole in the Wall"

Claudette Colbert, one of the most popular young leading women on the Broadway stage, has been cast for the principal woman's role in the Paramount all-talking mystery film, "The Hole in the Wall," which comes to the Antlers theatre beginning on Sunday, for two days.

The cast of this gripping play of super-stunts and their methods of fake spiritualism includes the names of many others notable on Broadway. Among them are Edward G. Robinson, as the principal heavy, David Newell as leading man, Louise Gossett Hale, Harry MacCollum, Donald Meek, Alan Brooks, George McQuarrie, Katharine Emmet and Nelly Savage.

Robinson gave notable stage performances in the stage versions of "The Tracker" and "The Man With Red Hair." Newell has appeared with Ethel Barrymore and other famous actresses.

"The Hole in the Wall" is an adaptation by Pierre Collings of a play presented on the Broadway stage about seven years ago. It centers around a game of criminal who employ the aid of a medium and spiritualistic means to gain their own ends in a gigantic crime ring. The weird and morbid manifestations of spiritualism are heavily stressed in the film.

In the dressing of a wound that every portion of the injured tissue is allowed to remain readily accessible to the air. Tight bandages, adhesive tapes placed directly on the wound, the sealing of dirty wounds with collodion are to be avoided. Punctured wounds should be opened.

The tetanus germ produces a powerful poison called toxin which is absorbed by the body. The toxin causes violent convulsions during which the muscles of the jaw are set so that the jaw can scarcely be pried open, hence the name lockjaw. The patient usually dies although energetic treatment in the earlier stages will often save life.

Since the injury from this disease is due to a poison or toxin the disease is treated with tetanus antitoxin. The serum is of less value in the treatment than in the prevention of the disease. The serum should be given soon after the injury if it is to be fully effective in controlling tetanus. In case of the least doubt give tetanus antitoxin.

Health Bulletin

A SANER AND SAFER CELEBRATION

(State Board of Health)

The great decrease in the number of cases following Fourth of July wounds is due to the vigorous campaigns that have been carried on against the sale of fireworks.

Most cities have gone on record favoring a safer and safer method of celebration. There are, however, cities in this state where the sale of fireworks is still tolerated.

Injuries caused by the explosions of fireworks are particularly dangerous for the reason that they are usually received in the street where contamination with dust or other dirt is always a certainty.

In case of premature explosions the dirt is blown into the flesh and ideal conditions for the development of disease produced. The wounds of blank cartridges are especially liable to produce tetanus.

The germ of tetanus is found widely distributed in nature. It is a normal inhabitant of the intestinal tract of herbivorous animals, such as the horse. Hence it is found in cultivated soils, in roads, streets and about stables. The germs develop from spores, which are frequently found in dust. These spores are able to endure heat, sunlight and various antiseptics a surprising length of time. The germ is able to grow and produce the disease only in the absence of free oxygen. For this reason great care should be taken

AGRICULTURAL NOTES

By J. C. LEEDY, County Agent

The codling moth is at present the most serious insect pest with which the apple and pear growers have to contend. Losses from worms in some years average as high as 20 per cent. By using proper control methods, many growers keep their losses well below 5 per cent.

It is of the utmost importance that the various codling moth sprays be applied at the proper time with respect to the stage of development reached by the insect and the stage of growth of the fruit.

Farmers' Bulletin No. 1326 briefly describes the various stages of the codling moth and gives an account of its habits in addition to detailed spraying instructions. A free copy may be obtained from the county agent, as well as a circular describing the method of making codling moth traps, which have proved useful in determining when the moths are flying.

Castrating and docking of lambs to increase profits from sheep was recommended to flock owners at recent lamb grading demonstrations at Oakland and Myrtle Creek, by H. A. Lindgren, livestock field man, O. A. C. Extension service, and R. L. Clark, secretary, Portland Livestock Exchange.

It was pointed out that docked lambs bring a higher price than undocked lambs, emphasizing the saying, "Dock your lambs or the market will."

Unless castrated, ram lambs at market age take on a "bucky" appearance, getting heavy in the

eyes is due to a poison or toxin the disease is treated with tetanus antitoxin. The serum is of less value in the treatment than in the prevention of the disease. The serum should be given soon after the injury if it is to be fully effective in controlling tetanus. In case of the least doubt give tetanus antitoxin.

Another Big Ace of Shows And It's ALL-TALKING "THE HOLE IN THE WALL" IN THE S-H-H

You hear the unearthly voices coming from "the beyond"; the weird wail of "The Banshee." You see and hear the nerve-rattling, interest-arousing spiritualistic, mystery drama with the big "kick" climax!
