The McCormick-Deering gas engine makes a fine drier fan power unit. It burns gas, kerosene or distillate. The throttle governor feeds only enough gas to keep up the speed which gives an even speed and is economical in fuel. Continuous running does not hurt it as every part can be greased without stopping. They come in 3-6 and 10 H. P. and their power is 50 per cent greater than most gas engines of the same rating. They are sold at Wharton Bros.

Learn this vital truth about sugar
Women cooking authorities show three astounding results of sugar in cooking vegetables

EVERY woman today wants every member of her family to eat more vegetable foods. She knows they are teeming with vitamins and that they are invaluable for roughage and mineral salts. Now women cooking experts have rediscovered the old secret of adding a dash of sugar to the vegetables while they are cooking (preferably in little water). These women authorities point out that the dash of sugar does three things. 1. Makes "stove" or wilted vegetables taste fresher. 2. Improves the pleasing colors of the vegetables. 3. Develops, accents and points up the delicate appetizing vegetable flavors.

It must be borne in mind that the correct dash of sugar does not in any sense make the vegetables taste sweet. This is not the purpose of using the sugar.

Physicians and health authorities urge women to see that every member of their family eats regularly of varied balanced foods. Yet every woman knows that it is impossible to force the eating of tasteless, unpalatable foods regardless of how healthful they may be. Remember the secret of a dash of sugar in making cereals, milk desserts, fresh and cooked fruits, beneficial vegetable dishes, and many meats so delicious that they will be irresistible. And for dessert—a bit of sweet makes the meal complete. The Sugar Institute.
