EVANGELIST HOLDS MEETS AT OAKLAND

Much interest is being shown in the evangelistic meetings being conducted at the First Christian church in Oakland by the Rev. W. W. White. Meetings are being held each night, except Monday, until May 22.

Rev. Mr. White is a former resident of Douglas county, having lived for a number of years at Tualatin. He attended school in Dodge county. He is a brother of Mrs. Duane Lackey of Oakland, county Christian Endeavor president.

He is being assisted in the music of the meetings by Floyd and Doris Lane.

ECLIPSE OF MOON

TO OCCUR MAY 14

NEW YORK, May 7.—(AP)—For 51 minutes the night of May 14 the moon will be totally eclipsed over the entire United States and North America and over the western part of South America.

The earth's shadow will completely cover the moon at 8:18 a. m. eastern standard time and will start sliding off the moon's face again at 1:09 a. m.

For the eastern part of the United States this means that the end of the eclipse will be seen on a setting moon in the west while dawn is lighting the eastern horizon. The sun rises on the morning of May 14 at 4:44 a. m. and the moon sets five minutes later.

The preliminary of this celestial show will be visible to many eyes shortly after midnight. At 12:44 a. m. eastern standard time, the penumbra—the partial shadow of the earth—will begin to veil the moon's face. The penumbra does not blot out the moon, but only darkens it, as a small portion of the sun's rays still strike the moon.

At 1:09 a. m. appears the umbra. This is the round, solid black shadow of the earth. It slides across the moon taking an hour and 21 minutes to completely cover the satellite. For western portions of the United States the reverse of umbra and penumbra will be visible. The moon leaves the umbra at 5:31 a. m. and the penumbra at 6:43 a. m. eastern standard time.

During total eclipse, the moon is surrounded by a red glow, a copper-colored band. This glow is the red halo of light which the sun makes around the earth at the line between daylight and darkness. To a person on the moon, this halo would be seen completely surrounding the earth. It is due to the same filtering of light by the earth's atmosphere which causes the red colors of sunset and sunrise.
