ANNUAL MEETING HELD BY CHURCH OF CHRIST, SCIENTIST

BOSTON, Mass., June 6.—A warning to nations "whose governments have been conceived largely in selfish ambition and brought forth by human force" was issued here today at the Annual Meeting of the First Church of Christ, Scientist, The Mother Church, by the Christian Science Board of Directors who declared the lessons of history show such governing bodies to be "of few days and full of trouble."

Reports disclosed continued growth of the Christian Science movement, increasingly higher standards for authorized periodicals, and a large number of requests from groups of non-Scientists for representative Christian Scientists to address them.

Directors' Report

Ezra W. Palmer, clerk of the church, reading the statement from the Directors, reported that The Mother Church has grown substantially in numbers during the past year; is united, harmonious, and without debt; is continuing on the theme of world relations he read, in part: "More important than all, however, is the marked success with which the healing ministry of Christian Science is being practiced throughout the world. It also indicates that the day is approaching when responsible heads of governments will see that undue reliance upon material means and methods to accomplish their ends inevitably results in failure and defeat. They will then realize that no nation is stronger than the moral fiber of its people, and that a nation can become truly great and permanently endure only to the extent that spiritual qualities are cultivated in the thoughts of its citizens and permitted freely to operate in the government of their lives."

The Directors further called the attention of Christian Scientists to the responsibility they have in respect to upholding such fundamental issues of life as cultivation of good will and preservation of a system of government protecting the civil rights of its people and ensuring to them freedom of speech, of the press, and of religious worship.

You may use up to 60% MORE GAS getting into "high" again

In today's stop-and-go driving, you're always shifting gears.

When in "low," your engine makes about 12 turns for each turn of the wheels... in "second," about 8... in "high," only about 4. That's why, in your stop-and-go driving around home, ONE mile on your speedometer may be TWO miles to your engine. It depends on how much of the driving is in low and second gears.

Shell engineers found that getting into high gear from a single stop can waste enough "undigested" gasoline to carry you 1/2 of a mile.

To cut this waste, they rearranged the chemical structure of gasoline, making every drop usable under all driving conditions.

YOUR GEAR RATIO IN HIGH GEAR IS ABOUT 4 TO 1 IN SECOND GEAR IS ABOUT 8 TO 1 IN LOW GEAR IS ABOUT 12 TO 1 The more you STOP and START, the farther your engine travels in comparison to your wheels... and the greater your waste of "undigested" gasoline.

You can save on your stop-and-go driving costs by the regular use of Super-Shell. Try it—and see for yourself.
