POET'S CORNER

WHICH IS BEST
By G. M. LEEPER
I look for the moon sank
Beyond the hill;
I thought—
And the beauty of it
Was with me still.
Ah, but which is best
In our small sky—
A drifting moon,
Or the peaceful memorior
Our thoughts supply.

MALLARD DUCKS NOW ON INCREASE

By "DING" DARLING
The ancestors of our domestic duck—
The wild duck of countries around the world, from Japan to France, from Mexico to Siberia, from Panama to Holland, the mallard—
Of the marsh ducks, the dipper and dabblers that dive but seldom, and feed in the shallows of ponds, lakes and marshes, the mallard and its cousin the black duck, are by far the most conspicuous.
The original breeding range of the mallard included practically every state in the Union. By the time of the Civil War, the mallard had been introduced to the little pond holes—everywhere there was water and sedge, the "green head" drake and modest brown hen reared their broods.
The frenzy for clearing the last square rod of wild land, for ditching, draining and cultivating, drove the mallard from much of its old territory and yet the mallard remains the first known and most prolific species of our American waterfowl. Probably more mallards are hatched in this country than any other species of wild duck.

Visits Barnyards
The old wild duck that quacks is the mallard, its voice being the same as that of the domestic variety. In fact wild mallard so readily mingle with barnyard stock and adapt themselves to domestication that it has been difficult to keep pure-bred wild stock for experimental purposes and re-stocking experiments.
The hosts of mallard pouring up and down the Mississippi valley have, in former years, been too vast for any reasonable estimate to be made of their numbers. But civilization, with its twin menaces of drainage and drouth, pasturing marshes and the heavy slaughter in years when there was no closed season or bag limit has taken its toll of even this most common species.
Now they're on the upgrade and just as long as we allow ourselves to kill less than we hatch and rear increase, the length of season and size of bag limit depends altogether on how rapidly we restore the population to adequate numbers by intelligent management.
