GLEE CLUB WILL HEAR ITS PROGRAM

Practice Will Be Recorded by KRNR; Facilities for Concert Ideal.

The Roseburg Men's Glee club, which is presenting its annual spring concert at Hunt's Indian theatre, Tuesday, April 25, will have the unique experience of hearing its own program.

A dress rehearsal is to be held Sunday morning at the theatre and arrangements have been made by radio station KRNR to make a

recording of the program. After the practice, the singers will have the experience of sitting in the audience and listening to their own music.

The public will hear the glee club's concert Tuesday night under the best obtainable conditions. Heretofore the organization's programs have been given in public halls, where acoustical affects were not the best for the type of music presented. The theatre, however, with its facilities for control of sound, is expected to produce excellent conditions for both singers and listeners.

In addition to the glee club music and the groups of two soloists, the theatre management will present a screen comedy and two special musical shorts to make up more than two hours of entertainment.

The ticket sale for the program is in progress and meeting with a very warm response.

PRESS WILL TELL HI-OCTANE STORY

According to an announcement made today by W. T. Dinkins, vice president and general sales manager for the Richfield Oil corporation, his company will enter upon one of the largest newspaper campaigns in Richfield history.

Two hundred and thirty western newspapers will be used to tell the public of the eleven western states the new Hi-Octane story. Large dominating advertisements, many in color, will be released approximately April 22.

According to Mr. Dinkins, newspaper advertising will be used as the backbone of the campaign.

It is understood that this campaign will announce the introduction of a new motor fuel. Although no official statement has been made in regard to the character of the new product, it is believed that the company is prepared to offer the motoring public a new, more powerful gasoline which is entirely new to the petroleum business. It is understood that the construction of the new Richfield refinery has made this new development in gasoline possible.
